NUMISMATIC CHRONICLE.

T.

CRETAN COINS.

THE following pages contain a description of several unpublished coins of Crete, and some remarks, chiefly on various types and attributions, which have suggested themselves to me whilst preparing the catalogue of the Cretan coins in the British Museum. Although there is etill wanting a complete monograph ou the subject, corresponding to those published by Mr. Head and Professor Gardner on various cities and districts of Hellas, the task of undertaking it would, at present, be comowhat unsatisfactory, and even premature; partly hecause only a comparatively emall number of Cretan coins have been puhlished hy private collecters and by the curators of public museums, and partly because our materiale for the history of Creto, which, on the whole, are far from copious, might he, and ere long probably will be, coneiderably enlarged by excavations in the island. The great bulk of tho information derivable from the literary cources has been collected in the three volumes of Hoeck's well-known Kreta,2 a learned but ponderous work, of which, however,

Among the numerous unpublished coins made known by Dr. Imboof-Blumer in his recent Monnaies Greeques (1883), comparatively few of Crete are included. We are glad, however, to have the assurance of the author that he has collected sufficient materials for a ceparate essay on the Cretan series.

there is now a readable summary in the Précis de l'Histoire de Crète, by MM. Bolanachi and Fazy. Bursian, in his Geographie von Griechenland (vol. ii. pp. 529-581), has given a very useful account of the various Cretan towns, and has incorporated much of the material which has accumulated since the time of Hoeck; and a good chapter on the Cretan State will be found in the last edition of Schömann's Griechische Alterthümer.4 The archæological contributions to our knowledge of Crete are not vory numerous, for the good reason that no systematic excavations have ever heen carried on in the island. Travellers like Pashley,5 and Spratt and Thénon? have indeed rendered good service, especially in identifying the ancient sites; hut if we except the numerous lentoid gems which have been found in Crete, the coins, and a few isolated antiquities published in various periodicals, not much important evidence can be said to he derived from the monumental sources. Not only archeologists generally, but numismatists in particular, would certainly have much to gain from a thorough exploration of the island. We should obtain, to hegin with, a trustworthy record of the find-spot of all the coins that wore hrought to light; if a hoard of coins were unearthed we should have an accurate analysis of its contents; and as it would almost certainly

Paris, 1869, Pt. I. Pt. II. deals with the post-classical history of Crete, on which see also Perrot, L'île de Crête. Paris, 1867.

include a number of non-Cretan coins, such as those of Aegina, Cyrene, and Argos, we should he provided with additional data for determining the periods of the Cretan coins themselves. Further, from inscriptions we might hope to glean new details of Cretan history; and by inscriptions and statuettes and votive tahlets a flood of light could hardly fail to be shed upon many of the obscurer places of Cretan religion and mythology. Crete was a land that teemed with curious myths-Creta multis famigerata fabulis the geographer Mola calls it, and the native coins are full of mythology and full of evidence as to the local cults of Crotan towns. At present, however, some of the most curious coin-types, like the Πτολίοικος of Aptora and the Fedgaros of Phaestus, remain but little more than isolated curiosities, owing to our need of further monuments to explain and illustrate them. Of the remarkable art of Crete, now known chiefly from coias, and in them often seen under a harbarous form, we should also gladly welcome any fresh examples.

The incidents of Cretan history are of a somewhat uninteresting and even ignohle character. If we would seek the true glories of Crete we must turn to her legendary foretime, to the days of Minos and of Daedalus, to the days when Agamemnen, king of men, rejeiced before Troy as he saw the Cretans arming around the warlike Idomoneus: for they "all were skilled in warring, neither did disheartening dread keep back a man of them, nor did any one yielding to coward sloth avoid the evil contest." To the not unwholesome hut almost too thorough-going scepticism of the historian Grote the legends of Minos and the rest remained mere legends; they were as curtains which might, indeed, conceal behind them figures of flesh and blood, hut curtains which could not

by any possibility be withdrawn. The more brilliant and probably more discerning criticism of Curtius has assorted that there attaches to the Crete of Minos the notion of a marked historical cooch of civilisation. Minos himself may be looked upon as the first sea-king, the lord of the Isles of Hellas. It is true that the nebulous veil of myth will hardly enable us to recognise the outlines of historical personages, but yet it is not difficult to make out that the essence of the legends of Minos consists in the fact that "order and law, the foundation of states, and a variety of forms of divine worship originated in his island." Open to three continents at once—to Greece, to Africa, and to Asia, and especially to the civilising influences of Phrygia and Phonicia, Crete gave birth to a civilisation which bore a Hellenio stamp, and which was formed "out of the confused minglings of different phases of nationality by a process of elimination and refinement." The recovery of the historic element in legend is obviously a difficult if not exactly an impossible task, but there can be little doubt that well-directed excavations might discover in Crete, as they have at Myconao, in Cyprus, and elsewhere, a clue to many dubious points in its early history, and even perhaps their solution. What, for instance, was the precise extent of that Phrygian and Phœnician influence in Crete which we now but dimly approhend through the obscure indications of certain myths? What is the true significance of legends like those of Daedalus? Was Crete, as a recent German writer has emphatically maintained, really an important centro of primitive artistic energy? These, wo say, are questions which it might be possible for archaeo-

History of Greece, i. p. 71 f. (Eng. trans.).
Milchhoeffer, Die Anfängen d. Kunst.

logy to answer, and upon which even the acutest literary criticism cannot claim to have said the last word.

But it is not so much with the half-mythical past as with the historical present of ancient Creto that the numismatist is concerned. And, first, we must notice how largely the whole course of Cretan history was determined by the geographical conformation of the island itself. Broken up into valleys divided one from another by barriers of mountain, Crete seemed to present a physical obstacle to political union and centralisation. Though certain traits of character and forms of polity, though the worship of certain divinities, as of the goddess Britomartis, or Diktynna, are found throughout the island, the history of Crete is principally the history of individual Cretan cities, each with its own government and isolated interests; each striking its own coins, and even using its own especial calendar. The history of these . cities in earlier days is very imperfectly known to us: we know, however, that the streams of Cretan activity never mingled with the broad sea of Hellenio life. From the glorious contest with the Persians Crete stands aloof; she has neither part nor lot in the great Hellenic war of the fifth century.10 The Cretans have always their hands too full with their own internal struggles, and if thoy fight beyond the limits of their island it is in the character of mercenaries, embracing any cause for pay. Three of the Cretan cities, namely Cnosses, Gortyna, and Cydonia, seem to tower above the rest, but we find them now united, now disunited, just as it suits their temporary purpose. Of these and of the other cities we obtain more frequent glimpses as time advances. A number of inscriptions

¹⁶ See, howsvsr, Thuc., vii. 57.

helonging chiefly to the end of the third century B.c. record the treaties made between various communities of Crete—the alliance of Lato with Olus, of Hierapytna with Priansus, of Hierapytna with Lyttus, of Dreros, Cnossos, and Miletus against Lyttus; 11 and these inscriptions, together with the details given by Polybius, enable us to form some general notion of Cretan politics, and of the vehement strife of city with city. In B.c. 216 we find the Crotans, weary for a time of their internecine struggles, inviting Philip V. of Macedon to assume the general protection of the island; but no pressure from outside seems ever to have much affected the petty course of Cretan history, or to have forced the cities into a really permanent union. In the second and first conturies before our era the Cretans came into contact with the power of Rome, and in B.C. 67 the island, which had long heen a stronghold of pirates, was finally reduced (not without some display of native hravery) hy the Roman general Metellus.

The knowledge of these and other incidents in Cretan history does not, unfortunately, render us much assistance in arranging the Cretan coins; and it has further to be regretted that the evidence of style, usually so valuable to the numismatist, is here to a great extent unavailable on account of the peculiar character of Cretan art. The chronological sequence of the coins would, in fact, he far more uncertain than it is, were it not that the inhabitants of Crete had an especial fondness for using the coins of other Greek peoples as flans upon which to impress their own devices and legends. Dr. Friedlaender, 12 in one of the few articles as yet published upon the subject of Cretan

See a list in Hicks, Manual of Greek Inscriptions, p. 295;
 cp. also Bull. de Corr. Hell., iii. (1879), p. 290 f.
 Zeit. für Nun., iv. p. 837 f.

coins, has called attention to some of these re-strikings: I have found others in the British Musenm, and instances are probably vory numerous, though it is not always possible to make out the original types of the re-struck specimens. Guided chiefly hy indications of this kind we may perhaps approximately assign the extant coins of Crete to the four following periods:—I. Circa B.C. 480—431. II. B.C. 431—300. III. B.C. 300—200. IV. B.C. 200—67.

The first issue of money in most of the cities does not seom to have taken place much earlier than B.c. 431, the date assigned as the upward limit of our second period; and in some places probably not earlier than B.c. 400. As might he expected, however, from what we know from other sources, the important cities of Chossus and Gortyna have considerable issues before B.c. 431, though perhaps no Crotan coins can he assigned to a date much anterior to the Persian wars, or ahout B.o. 480. To judge from extant specimens Cydonia, the third great city of Crete, does not appear to have had a coinage of its own till the end of the fifth century B.C.: a remarkable archaic coin of Phaestus, which I publish for the first time (see p. 45), is, on the other hand, a somowhat unexpected pieco of evidence as to the importance of this city in early times. The first coinages of one or two other cities, as Itanus, Praesus, and Rhaucus, seem also to fall within our first period, though in the later rather than in the earlier part of it. It is apparently to our second division (n.c. 431-300) that the great hulk of Cretan monoy belongs: the coins assignable to the succeeding period (B.C. 300-200) are not so numerous. Müller 13 has attributed to one

¹² L. Müller, Numismatique d'Alexandre le Grand, p. 227 f.

or two of the Cretan cities tetradrachms with Alexander's types, but the attribution of these particular specimens is far from certain, though it is not improbable that coins of this class may have circulated in the island; it would be interesting to have well-authenticated instances of such specimens having been found in Crete. I have not heen able to connect the various treaty inscriptions of the third century with the coinages of the cities to which they relate, though of one remarkable alliance hetween Cnossus and Gortyna we have, as I shall presently suggest, an interesting numismatio memorial. Our fourth period is composed of a good many coins, none of which seem to he much carlier in style than B.C. 200, and some of which may be placed nearly as late as u.c. 67, the date of the reduction of the island hy the Romans, when the autonomous coinage must have come to an end.14 The coinage of Crete under the Empire consists chiefly of the copper coins hearing the inscription KOINON KPHTΩN, and of certain coins in silver and copper struck under the carlier emperors, and hearing the names of different Cretan cities.

The strango and well-marked character of the art of Cretan coins was noted long ago by Eckhel; but it is Mr. Stuart Poole who must claim the credit of having been the first to call attention to such merits as it possesses, and especially to those realistic qualities which it often exhibits. The Cretan artist goes straight to nature for his inspiration: he excels, as Mr. Poole has pointed out, "in the portrayal of animal and vegetable subjects, and

¹⁴ The silver coins published in the Zeit. f. Num., x. (1883), p. 119 f., and by Dr. Imhoof-Blumer, Monn. Gr., p. 210, must not, however, be forgotten.

delights in perspective and feroshortening." 15 Since this was written some further suggestive criticism on the subject has been advanced by Prefessor Gardner, in his important work on the Types of Greek Coins.16 One remark there made eught especially to be berne in mind when appreaching Cretan ceins from the artistic standpoint, namely, that the love of nature and the picturesque which strikes us in Cretan coin-designs is, to a great extent, the result of the religious conditions under which the Crctan artist worked. His task was to body forth and turn to shape bizarro and local myths-many of them associated (as Otto Jahn has shown) with a somewhat crude nature-worship. These trees, for instance, which he se often introduces are not inserted primarily as ornamental accessories, but as integral parts of the typo, te give an outward expression to a religious belief. He does net, for example on the coins of Gertyna, seat his Europa in a tree purely for the sake of artistic effect, but because the Gertynians venerated a sacred tree—that "juxta fontem Platanus nunquam felia dimittens" which was the witness of the leves of Zeus and Europa. But although to a great extent conditioned by the peculiar character of Cretan myths, the art of Crete, as displayed on its coins, has certainly originality and evon charm. The Cretan cointypes are interesting, mereever, as expenents of certain qualities in a local school of Greek art of which otherwise we should know but little. It is, however, fairly open to question whether these very qualities of picturesqueness and uncompromising realism are those which we most

¹⁸ R. S. Peele, in Num. Chron., 1864, p. 240; cp. Encyclop. Britannica, 8th ed., art. "Numismatics."

¹⁶ Pp. 160—167, and ep. Pl. IX.; see also p. 172.

VOL. IV. THIRD SERIES.

desire for coin-reliefs. Now, on comparing the work of a Cretan coin engraver with that of a good Greek coin engraver who is not of Crete, what we are compelled, I think, to decide, is, that the designs of the Cretan artist are indeed excellent in themselves, but that the designs of the non-Cretan artist are not only excellent absolutely, but relatively, and peculiarly fitted for the purpose for which they are employed. The Cretans, in fact, seem to have lacked that senso of fitness, that habitual recollection of the material conditions under which they worked, which is one of the grand characteristics of the engravers of Greek coins, indeed of all Greek artists. In their love of natural objects pure and simple, they forgot that natural objects fastidiously selected and even conventionalized may, under some conditions, be more artistically satisfying than nature faithfully transcribed from field and wood; and thus, though the bull on the coins of Gortyna may be nearer nature than the bull on the coins of Thurium. the θούριος βούς must be pronounced the finer coin-type. All the foregoing remarks of course apply only to the best designed and executed Cretan coins, for, as is well known, there are many specimens in the series which are altogether beneath oriticism. Some of these latter are simply the products of barbarian workmen who cannot make visible even the distinction between the male and female head; while many others, though better executed, betray an undoubted substratum of barbarism. Inequalities in the technical workmanship of contemporaneously issued coins are common enough in almost any Greek city, but they are particularly striking in Crete, and there may, I think, be observed in most of the Cretan towns, especially in the period n.c. 431-300, three distinct styles of coin-engraving all evidently contemporary. First, wo

have the coin of creditable design and execution supplied, as one is sometimes tempted to believe, by a non-Cretan artist as a model for the Cretan mints; next, there is the tolerably faithful though unskilled imitation of this prototype; while, finally, we have the rudest attempts at reproduction by an utterly barbarous hand. These differences may he well seen in the coins of Gortyna photographed in Plate I. The obverse of No. 1, both for grace of design and delicacy of execution, is worthy of all praise. The next specimen (No. 2) successfully reproduces the original motive, but the delicacy of execution is gone; the minuto folds in the drapery, for example, are almost heyond the powers of the second artist. The third engraver, as a glanco at the plate will show (Plate I. No. 3), is only competent to design for us a blurred figure of uncertain sex perched in a tree of laths. Sometimes, though not very frequently, the Cretans deliherately used the coins of other Greek cities as pattorns from which to copy direct; in some cases with considerable success, as in the Hora of Cnossus suggested by the Hora of Argos; though in others with disastrous results, as in the coins of Chersonesus, which are imitated from the fine money of Stymphalus in Arcadia.

With these preliminary remarks I now proceed to a discussion of individual coins in various Crotan cities, confining myself, as far as possible, to points on which I have some new suggestion to offer, or which seem to call for further examination.

ALLARIA.

The tetradrachm in the British Museum (weight, 235.3 grains) with obverso Head of Pallas, and reverse AA

Herakles seated on rock (Head, Guide to the Coins of the Ancients, Pl. 43, 28) formerly given to Laconia, seems to be rightly assigned by Mr. Newton 17 to Allaria. M. Bompois, in his Étude. des portraits attribués à Cléomene III. (p. 32, note) has objected to Mr. Newton's attribution, chiefly on the ground that the coin reads not A Λ but Λ A. But the legend on some of the smaller silver coins of Allaria with obverse, Head of Pallas, and reverse, standing Herakles 18 is also retrograde—NATΩIGAΛΛA; and I am informed that M. Bompois, on subsequently comparing the tetradrachm with the smaller coins in the British Museum, admitted the correctness of Mr. Nowton's view.

APOLLONIA.

1. Obv.—Read of Apollo r., wearing wreath.

Rev.—Tripod.

R. '9. Wt. 178'2 grs. Brit. Mus. Coll. [Re-struck; square labyrinth visible on reverse.]

2. Similar types.

At. ·8. Wt. 79·7 grs. Brit. Mus.

A comparison of these coins with the similar specimens described in the Revue Numismatique for 1865 (p. 163) enables us to give them with tolerable certainty to Apollonia. The work of the obverse is extremely rude, especially in the case of No. 2. The coins may be assigned to the fourth century B.c., as the larger piece has been re-struck on a coin of Chossus, apparently on one of the specimens with obverse, female head r., and reverse, BIb, and square labyrinth (Brit. Mus.), which may belong to the period B.c. 431—350.

¹⁷ Num. Chron., vii. p. 114.

¹⁰ Brit. Mus. Coll.

APTERA.

 Obv.—[A]ΓΤΑΡΑΙΩΝ. Head of Artemis of Aptera r., wearing earring and stephane ornamented with floral pattern; hair rolled. In front of head, in small letters, artist's name ΓΥΘ[ΟΔΩΡΟΥ].

Rev.—PTOAIOIKOX. Warrior (Pteras?) standing i., wearing cuirass, and holding in il. spear and shield ornamented with a star; his r. hand is raised to sainte a sacred tree which stands before him.

R. '95. Wt. 174.6 grs. Brit. Mus. [Compare Pl. I., No. 4, from Mionnet's east.]

This coin is apparently from the same die as the coin in Mionnet, t. ii., p. 261, No. 27, which is here photographed as being the better specimea of the two. The goddess represented on the obverse might at first sight appear to be Aphrodite or oven Hera, but she is in all probability a local form of Artemis, as an inscription, published in Lebas and Waddington,19 mentions τὸ ἰφὸν τὸ τῶς 'Αρτέμιδος τῶς 'Απτέρας. The artist's signature in front of the head has been already read in divers ways, but always erroneously.20 A coin in a private collection, of which I have seen an electrotype, reads with very fair distinctness, ΓΥΘΟΔΩ [POY], and the same inscription may even be made out on Mionnot's cast.21 The artist is. in fact, that Pythodoros who worked at the not far distant town Polyrhenium, and whose work we know from coins in the British Muscum (Pl. I. No. 7, and page 71), and from a specimen lately published by Dr. Imhoof-Blumer,22 on which he signs his name in full, $\Gamma Y OO \Delta \Omega POY$. The

coins made by Pythodoros for Aptera and for Polyrhenium present us with a female head identical in stylo. Thoy are the productions of a die-engraver with a tendency to over-ornateness in his work, but who is not without technical skill. His style is not unlike that of Neuantos, the engraver of Cydonia. The curious type of the reverse has been explained, with much probability, as relating to Pteras, the founder of Aptera, who also built one of tho early temples at Delphi.28 It is commonly stated that he is here engaged in plucking a leaf from the sacred bay, a somewhat meaningless action. It is much more probable that he is portrayed in the act of adoring the tree, or the divinity of which the tree is symbolical. The upraised hand is the ordinary Greek gesture of adoration, as may be seen on almost any votive tablet representing a deity and suppliants. On an Imperial coin of Pergamon the Emperor Caracalla may be observed saluting in the same manner a tree round which is coiled the serpent representative of Asklepios.24 The reverse inscription of the Aptera coin is commonly ΓΤΟΛΙΟΙΚΟΣ, though a specimen in the Hunter Collection is said to read PTO-ΛΙΟΣΤΟΥ,25 and I have seen a copy of one reading PTOΛΙΟΙΤΟ[Σ]. Πτολίοικος is a word not known to occur elsewhere: it has been explained as an epithet equivalent to πολιούχος, or, better, to πόλεως οἰκίστης. coin in the British Museum similar to the above, but with APTEPAIΩN before the head of the obverse, is countermarked with the caduceus; another similar specimen has the monogram A on the reverse.

Hae loquendi formula non usus fuiseet Stephanus, nisi iu praecedentibus alterius meminiseet."—Berkelii Annotationes in Steph. Byz.

to a Cretan town, Arsinoe, must, therefore, be considered as uncertain.

Axus.

The coins of this city have been made the subject of a short paper by Dr. Konner in the Numismatische Zeitschrift.28 The form EAEION, which appears upon them, occurs in an inscription of Axus, published by Lebas and Waddington,29, though Eaukew also appears in the same The orthography of the name, as M. Waddington remarks, varies in the authors, but all the variations srise from the initial digamma of the word in the local dialect.30 Two specimens in the British Museum of the copper coins of Kenner's Class III. (p. 19) are countermarked with a laureate head of Apollo with quiver at his shoulder; a Museum specimen of the copper coin with obv. head of Zeus, and rev. thunderholt, is countermarked with a head of Zeus, or perhaps Poseidon, and another specimen with these types is countermarked with a youthful head, perhaps of Apollo.

CHERSON ESUS.

Dr. von Sallet³¹ has already pointed out that one of the earlier silver coins of this place is a rude copy of a well-known coin of Stymphalus, in Arcadia. The British Museum bas several barbsrous Chersonesus imitations of the Stymphalian coin, on which the laurel wreath and elaborate earring of the Arcadian coin are preserved (rev.

²⁸ Vol. viii. pp. 15—20.

²⁰ Voyage Arch. (inser.), tom. iii. p. 81, No. 65.

³⁰ For other examples of the L ferm of the digamma see Kirchhoff, Studien zur Gesch. d. Griech. Alphabets, 3rd ed., Taf. I. (Korkyra), Taf. II. (Bœotia, &c.).

³¹ Zeit. für Num., ii. pp. 124, 125.

Inscription, Herakles with cluh). The head on the coin of Stymphalus is that of the Artemis Stymphalia: the people of Chersonesus prohably called it Artemis Britomartis, a goddess of whom there was a sanctuary in their town.³² The Stymphalian head is more successfully copied on the coins of Chersonesus with the reverse type Apollo seated on omphalos, holding lyre and plectrum (see Pl. III. No. 12, obv. only). The coinage of the place prohably came to an end about B.c. 220, for its copper money with obv. head of Pallas, and rev. XEP is exactly like that of Lyttus, which we have good reason to helieve did not issue coins after that date (see p. 42). The copper coin described hy Leako ³³ with obv. eagle l., rev. XEP (in monogram) is also prohably not later than B.c. 220. Specimens of these coins are in the British Museum.

CNOSSUS.

 Obv.—Minotanr, head facing, running r.; he holds in r. round stone, his l. is raised.

Rev.—Cruciform Inbyrinth of maeander pattern, in centre of which : : (star); in each of its four angles is a deep incuse square in which is a pellet.

R. ·8. Wt. 184·8 grs. Brit. Mus. [Pl. I., No. 10.]

This coin probably helongs to the early part of the fifth century, and, to judge from its lumpy fabric, is unterior to the other Cnossian didrachms with similar types. The legends of the Minotaur and labyrinth, like all the principal religious heliefs of Cnossus, are fully illustrated by the coinage of the place. The appearance

³¹ Strabo, x. p. 479.

³³ Num. Hell., "Chersonasus Cretæ," No. 1, Suppl.

³⁴ E.g., Mion. ii. p. 265, No. 52.

of the lahyrinth on this coin is important as showing, not, indeed, that it actually existed, but that the legends connected with it were current at an early period, though they are known to us through late writers. The five dots in the centre of the lahyrinth on the reverse of our coin are intended for a star; a star of the more usual form appears in the centre of the lahyrinth on Cnossiaa coins of the fourth ceatury, as does also a crescent.

- Obv.—Minotaur (head towards l.) running r.; he holds in r. round stone, his l. hand is raised, and holds a stone (?); border of dots.
 - Rev.—Within a square frame of the maeaader pattern, youthful male head r., with short hair hound by taenia. The whole in incuse square.
 - R. 1.1. Wt. 174.7 grs. Brit. Mus. [Pl. I. No. 11.]

The head on the reverse of this interesting coin seems to he that of a hero rather than of a god. The maeander pattern evidently represents the lahyrinth, and I would suggest that the head which it encloses is that of Theseus. His short hair seems to be bound with a fillet, as the head of Theseus is on a cylix in the British Museum, which represents the hero attacking the Minotaur. Against this attribution it may he urged that the head within the maeander pattern has not necessarily any connection with it, for on a Caossian coin of later style we find the head of the goddess Demeter enclosed within it; 77 in this case

Cp. R. S. Poole in Num. Chron., N.S., vol. i. pp. 171, 172.

³⁷ Zeit. für Num., p. 232. The female head surrounded by the circular maeander pattern on the silver coin in Mioa. ii. p. 266, No. 60, may perhaps he Ariadne, though Artemis Britomartis and even Persephone might put in a claim.

we might see in the head of our reverse, either that of Idomeneus or Meriones, whom we know to have been honoured with a cultus as heroes by the Cnossians; 88 hut Theseus seems, on the whole, the most suitable. A large series of silver coins of various types may he attributed to Cnossus for the end of the fifth and for the fourth century. The two principal classes consist (1) of the didrachms with obv. head of Persephone (some of good style), and rev. cruciform lahyrinth, or rev. Bucranium in maeander frame; (2) of the didrachms with obv. head of Hera, suggested by coins of Argos, 39 and rev. square lahyrinth (cp. Head. Guide, Pl. 23, 39). All these coins are well known, and it is sufficient to observe upon the type of Persephone that early legends conncoted Demeter with Crete,40 while Cnossus in particular disputed with Athens the glory of having been the first to possess the gifts of the Goddess of Corn. With regard to Hera, it was in the neighbourhood of Cnossus that her union with Zeus took place, an event which was afterwards commemorated by annual saorifices, and hy a mimetic representation of the marriage.41 These and other silver coins of the period are reinforced hy a considerable number of copper coins of thick fabric and of rudo style, of which the following are specimens:--

3. Obv.—Female head 1. (Demeter?), [countermarked with square lahyrinth].

³⁶ Bursian, Geographie, ii. p. 560.

[&]quot;The head is reproduced, not from the finer Hera coins of Argos and Elis, which are of B.O. 421, but from the later coins of Argos (rev. Diomede), which are evidently of the fourth century, about the time of Epaminoadas.

CRETAN COINS.

tyna, namely the labyrinth and Europa 48 on the bull, can surely point only to some actual alliance between the two Although such alliances were, as we know from inscriptions, not uncommon between cities of Crete, thoy have generally been but little noticed by ancient historians, and do not seem to have usually left their traces upon Cretan coinage. There was, however, concluded in the year 220 B.C. a very remarkable alliance between the powerful cities of Cnossus and Gortyna, which is recorded by Polybius.44 The object of the allies was to bring the other cities of Crete under their supreme control, and in this, we are told, they actually succeeded, though the important town of Lyttns at first held out against them. That Cnossus should on this occasion give an additional emphasis to the alliance by admitting the coin-types of her great ally to a place on her own coinage is not at all unlikely, and an examination of the coins thomselves will show, I think, that they may well be assigned on grounds of style to the end of the third century B.C.

Seversl of the flat tetradrachms of Cnossus having as their obverse-type the head of Zeus or Minos diademed (Pl. I. No. 15, rev. ΚΝΩΣΙΩΝ, square labyrinth, weight 257 grs.), are re-struck on money of the Seleucid kings; a specimen in the Vienna Cabinet is re-struck on a coin of Antiochus IX.⁴⁵ The Cnossian coins of this class, together with others in copper, with a bearded lanreate head, and as reverse, an eagle, must have formed the chief part of the currency issued during the earlier part of the period B.C. 116—67. Some writers have called the bearded

⁴³ Not only the Europa but also the border of rays is distinctive of the money of Gortyna.

⁴⁴ iv. 58-55; cp. vii. 12, 9. 45 Zeit. für Num., iv. pp. 339, 840; ib. v. pp. 148, 149.

head on the obverse of the tetradrachms (Pl. I. No. 15) the head of Minos. They point out that it is hound, not with the laurel wreath commonly assumed by the Father of gods and men, hut with a diadem, such as would be worn by the kingly Minos. That the Cnossians did represent their great legendary hero upon their coins we know with certainty, from the remarkable specimen at Berlin, bearing the inscription MIN $\Omega\Sigma$, on which Minos is represented as a Zeus-like figure, seated, and holding a sceptre.46 A coin of Chossus, published by Mionnet,47 having for obverse a female head, perhaps Ariadno, encircled by the labyrinth, shows as its reverse another scated figure of Zeus-like appearance, which might also he termed Minos, though there he holds a patera as well as a sceptre. On the head of these seated figures the diadem cannot be clearly made out, and it may be urged against the identification with Minos of the head on the Chossian tetradrachms that the copper coins which belong to about the same period have a hearded head, which is bound with a laurel wreath, and which it is difficult to call anything but Zeus. The claim of Minos to this head is therefore somewhat doubtful. A similar question as to identity also arises in the case of the figure seated on the reverse of the silver coin givon in Pl. I. No. 16.

8. Obv.-Head of Apollo 1., laureate.

Rev.—ΚΝΩΣΙ[ΩΝ]. Bsardless mals figure, drapery over kness, his hair bonnd with diadem, seated l. on squars labyrinth; hs holds is outstretched r. wiagsd Victory; his l. rests upon sceptrs. In field l. monogram 🛱 (beneath labyrinth, traces of inscription?).

<sup>Zeit. für Num., vi. p. 282 f.
ii. p. 266, No. 60.</sup>

R. Mionnet, vel. ii., "Cnessus," Ne. 70 (See Pl. I., No. 16, rev. only), photographed from Miennet's cast; a semewhat similar specimen in the Brit. Mus. Weighs 75.2 grs.

The Victory and sceptre being common attributes of Zeus en coins might dispose us to see in the interesting figure of the reverse a representation of Zeus as a Crete, as is well known, claimed the honour of having been the birthplace of the god. His wership was common in the island, and he was above all honoured at Cnossus.48 His appearance on the coins of Cnossus is, therefore, to be expected. On the ether hand, it may be said that the diadem, and, still more, the labyrinth which our figure has chesen for a seat, as Apollo does his emphales, point with almost equal directness to the youthful Minos. And between these contending claims of Zeus and Mines, Διδς μεγάλου δαριστής, it is most difficult to decide.

After the conquest of Crete by Metellus, and probably before the battle of Actium, Cnossus became a Roman colonia. A good list of its colonial coins has been given by Dr. Imhoof-Blumer in his Monnaies Greeques (pp. 213 -214), to which I need only add the two fellowing specimens in the British Museum, the attribution of which te Cnossus is extremely probable.

9. Obv.-C C plough r.; herder of dets.

No. 9 was obtained from Mr. Petrides: the inscription of its reverse is obsenre; the only letter visible may be a C. A comparison of No. 9 with No. 10 would lead us to suppose that No. 9 was issued under Augustus.

CYDONIA.

It is remarkable that there should be no archaic coins of this important city; but no specimens at present known to us can be placed earlier than our second period (s.c. 431—300), to which, and to the period s.c. 200—67, most of the Cydonian money appears to belong.

- - Rev.—ΚΥΔΩΝ. Naked male figure (Cydon?) standing l., stringing bow; on l., dog r. looking np; border of dots.
 - R. 1.05. Wt. 172.5 grs. Brit. Mus. [Pl. I., No. 6, obv.]

The monogram behind the head is not very clear: it has been road by Mionnet MP, by Dr. Von Sallet MP, and the latter unmismatist has suggested that we have here an artist's signature. The difficulties in the way of accepting this suggestion are, first, that the Cretan coinengravers, so far as we know, never sign in monogram; and, secondly, that the head on this coin is almost identical in style with the head on the silver coins of Cydonia signed by the artist Neuantos. We may, therefore, perhaps regard our monogram as that of a magistrate, and see in the obverse of our coin another example of

⁴ Zeit. f. Num., ii. p. 7.

⁵⁶ Mion., ii. p. 271, No. 112.

the work of Neuantos. On the Cydonian coins of the period to which this specimen belongs we should naturally expect to find the effigy of Diktynna, has Cretan goddess worshipped at Cydonia. The coin-types of this time are, however, of a Dionysiae character. The female head on the coin before us (Pl. I., No. 6) seems to he that of a Maenad, for we do not know that Diktynna had such attributes as the grape and vine-leaf. On other Cydonian coins of good style there occurs a head of similar appearance wreathed with ivy which has been called Dionysos; but it should be noted that yet another Cydonian head hat dissimilar in character and wreathed with ivy, is certainly female, as it is adorned with an earring, so that perhaps we should see in all these heads a Maenad rather than Dionysos.

The earlier reverses of the Cydonian coins display a youthful hunter (sometimes accompanied by a dog), in the act of stringing his how. Types of this class are common in Crete, and I shall endeavour to show farther on that it is generally a local form of Apollo who is thus represented. On the coins of Cydonia, however, the figure is perhaps the hero Cydon, who was doubtless venerated by the famous Cydonian howmen as the first

⁶¹ Diktynna—worshipped in some parts of Crete as Britomartis—appears to have been a native Cretan goddess of hunters and fishermen who had also perhaps a lunar rôle. She was more or less completely assimilated to the Hellenie Artemis, and is represented on later coins of Cydonia quite in the character of that goddess. See Lenormant, s.r. Britomartis in Daremberg and Saglio, Dict. des Ant.; Hocck, Kreta, ii. p. 158 ff.

^{* 12} Gardner, Types, Pl. IX. No. 22; p. 166.

⁵¹ Brit. Mus. Coll.

great bowman of their city.54 To the infant suckled hy a wolf-the reverse-type of other coins of Cydoniamay also he given the name of Cydon, though no legends of his infancy are related in the authors. According to Antoninus Liheralis,55 Miletus, the son of Acacallis, was exposed, and suckled by a wolf, and it is not unlikely that a similar story may have heen told by the Cydonians concerning their hero Cydon, who was (hy Apollo or hy Hermes) also a son of Acacallis. Prof. Gardner⁵⁶ considers that the animal represented on the coins is a female hound rather than a wolf, and it is quite possible that a hound may have heen substituted for the wolf in the local Cydonian legend. The coins of which the revorse types are photographed in Plate II., Nos. 2, 4, helong to the interesting series of tetradrachms which exactly reproduce the types of the corresponding Athenian coins, though they present the name and hadge of different Cretan cities. Coins of this class have been published by M. Beulé, 57 and hy Mr. R. Stuart Poole, 58 and specimens of six Cretan cities are known, namely, Cnossus, Cydonia, Gortyna, Hierapytna, Polyrhonium and Priansus. Tho two writers just mentioned suggest that these specimens helong to the time whon the Cretans were in alliance with Athens against Philip V., an alliance brought about hy Cephisodorus⁵⁹ ahout B.C. 200. Mr. Barclay Head supposes that the Athenian types were adopted for commer-

cial reasons, 60 a theory which is also hinted at by Beulé as an alternative. Some of the heads of Athene on the obverse of these pieces are of the ordinary style of the later Athenian tetradrachms (e.g., at Cnossus, see B. V. Head, Guide, Pl. 56, 30), while others again are somewhat barbarous and show the hand of an unskilful Cretan workman (e.g., at Polyrhenium and Priansus; see "Num. Chron." (N.S.) i., Pl. VII., Figs. 2, 3.)

- Obv.—AIOΩN (before the head). Helmeted head of Pallas r.; border of dots.

⁴³ Mien., Sup. t. iv., pl. viii. 5; Benlė, Les mon. d'Ath., p. 90.

the naked figure is probably Zeus hurling a thunderbolt towards the right. The appearance of this figure is remarkable because it does not correspond to any similar figure on the earlier coins of Cydonia. It is usual for these Creto-Athenian pieces to present as their subsidiary devices some object which is distinctive of the previous coinage of the towns. Thus Chossus adopts the square labyrinth; Gortyna, a bull, and our first coin of Cydonia (No. 2) has the wolf or hound suckling Cydon, an incident often portrayed on the Cydonian coins. The Zeus on our No. 3 thus forms a curious exception to this rule; and it is not unlikely that Cydonian coins with the type of Zeus hurling a thunderbolt may one day be brought to light. 63

ELEUTHERNAE.

- Obv.—Beardless mals head r. (Apollo); round the head, fillet or wreath composed of dots.

- M. Lenormant,⁶⁴ in commenting on another coin of Eleuthernae with a type of somewhat the same character as that of our reverse, has conteuded that we ought not to recognise in it n figure of the god Apollo hut of a Cretan hunter. In his brief notice M. Lenormant did not under-

⁶³ The Creto-Athenian tetradrachm of Polyrhenium (specimen in Brit. Mns.; cp. Mion., Sup. t. iv. p. 334, No. 241) has ns its subsidiary device a small figure wearing a short chiton and shooting r., perhaps Artemis Diktynna. This also does not occur as a type on any of the known Polyrhenian coins.

⁶⁴ Rev. Num. (1883), pp. 129—132.

CRETAN COINS.

take to bring together all the numismatic svidence hearing upon the point, and I therefore propose to do so now, stating beforehand that the weight of the evidence seems to be in favour of Apollo. The earliest of all the coins of Eleuthornas (Pl. II., No. 5) transports us at once to the forest and shows us the divine huntress and hunter following their favourite pursuit; for hunting itself, as Xsnophon 65 will have it, is the invention and delight of gods-'Απόλλωνος γάρ καὶ 'Αρτέμιδος άγραι καὶ κύνες. The femals figure of the obverss shooting with her bow and attended by a hunting dog cannot fail to be recognised as the Artemis 66 of Crote-Diktynna or Britomartis, and it is natural to suppose that the male personage who occupies the rsverse is her brother Apollo. This latter figure, who is apparently beardless, seems to be clad only in a short hunting tunic. He is advancing rapidly in the pursuit of his prey, holding in his left hand a stons, in his right his bow; a dog runs on before him, and forest scenery is indicated by the presence of two trees.67 A youthful figure holding stone and bow, though undraped, is a common coin-typs at Eleuthernae; it appears also on the silver

66 In an inscription found at Eleutherns we find a dedication to Artemis. See C. I. G. 2506.

⁴⁵ De Venat., i. 1.

This remarkable coin, which is here photographed from an electrotype, was originally offered to the anthorities of the British Museum, but had to be declined for want of funds. It has since heen secured for the French Collection, and has hesn published by M. Muret in the Revus Numismatique, 1883, i. p. 65. M. Lenormant (Rev. Num., 1883, p. 180 f.) has drawn attention to the hunting-dress worn by the male figure, though I cannot make ont on his head the "large handeau" to which that writer also refers. M. Muret and M. Lenormant do not seem to have noticed the stone which the figure holds, but it is quite plain, and is an important attribute.

money of the neighbouring Rhithymna.68 The bow which the figure holds would be suitable either to Apollo or to a hero hunter, but the round stone is at Eleuthernae distinetly an attribute of Apollo, for on later bronze coins of the place (see Pl. II., No. 3, rev.) we find an unmistakable Apollo seated on the omphalos, beside which is a lyre, holding in his outstretched right hand a round stone, his hew-case or quiver at his shoulder. The head of a laureate Apollo is also common on both silver and hronze coins of Eleuthernac, and the barbarous head on our No. 1 of this town (see Pl. II., No. 6) is doubtless intended for the same divinity. The obverse type of the coins of Rhithymna already referred to, is likewise the head of Apollo. This type of a youthful figure holding stone and bow can hardly be discussed without taking into account a similar type which appears on a silver coin of Tylissos 69 (see Pl. II., No. 8, rev.; obv., Head of Hera), that of a yonthful figure with long hair, naked, and holding in one hand a goat's head and in the other a bow. The analogy of the Eleuthernian coins would incline us to see in this figure a representation of Apollo as a hunter, and there are, in fact, some slight indications that it is Apollo who is intended. It will be observed that in the field of this coin there appears an arrow-head; now this object ought not to be regarded as a mere isolated symbol denoting a magistrate, but as having reference to the type itself, and especially to the goat's head, for on a silver coin of Praesus 70 we find as the type a half-goat, and in the field an arrow-head. On coins of Elyrus also and on those of Hyrtacina the type is a goat's head, beneath which is an

⁶⁰ Brit. Mus. Coll.
¹⁰ Brit. Mus. Coll.

arrow-head. Further, that the goat and arrow-head are counceted with Apollo seems probable, because on the obverse of the coins of Praesus is a head of that god, and on another coin of the same place (Brit. Mus. Coll.) we have a goat's head within a laurel wreath, the obverse being a head of Apollo. The Elyrus goat would also seem to be connected with Apollo, for Pausanias n saw at Delphi a hrazen goat dedicated by the people of Elyrus, and represented as suckling the infants Phylacis and Phylandros, who were children of Apollo by Acacullis. Pausanias adds that the god visited Acacallis in the city of Tarrha, where we know (from Stephanus Byzantinus) that an Apollo Tarrhaeus was worshipped. 22

All these indications would therefore lead us to infer that the types which we have been discussing relate to Apollo in the character of a hunter, and especially as a hunter of the famous wild goats of Crete, whose horns we are told were used by the Cydonian archers for their bows. Even at this day the goats of Crete, according to modern travellers, might tax the energies of a mighty hunter. "Upon the bleak crest of Ida," says Admiral Spratt, " we sighted a group of Agrimia, a species of ibex, that had been browsing upon the scanty pasture (and) were standing motionless upon its pinnacle. . . They were too wary of any approach of man (and) were not to be taken even by a Highland deer-stalker and keen sportsman . . . but

¹¹ x. 16.

The Cydonian type of a naked male figure stringing a bow has been referred to above (see p. 25). It may be added that a coin of Ceraitæ (Mion., ii. p. 264) has as reverse a spear-head and arrow-head side by side, the obverse being a barbarous head, probably either Artemis or Apollo.

13 Travels, i. pp. 12, 18.

hounded away, as soou as we were perceived, over snow and steep, crag and precipice, until they had gained another commanding peak far out of reach of gun and rifle, and there again they watchfully grouped themselves, with their ponderous and sahre-shaped horns curved in relief against the western sky."

ELYRUS.

The goat's head and arrow-head which constitute the ohverse type of the silver coins of Elyrus have just been referred to: the heo on the reverso is more difficult of explanation. Pashley tells us that in his travels in Crete ho tasted some very fine honey at the site of the ancient Elyrus; hut we do not know that the Elyrian bees were famous in antiquity, or that they were sacred to any particular divinity. It would be natural to regard the bee on the coins as the symbol of the Ephesian Artemis, But that goddess does not seem to have been honoured with worship by the Cretans, and only appears quite exceptionally upon their coinage.74 The Artemis to whom the Britomartis or Diktynna of Crete is akin is rather the virgin huntress of Hellas than the tecining mother of Asia. On the whole, it would seem that the divinity of whom the hee on Cretan coins is most likely to be symbolic is the god Zeus, for in the legend of his

⁷⁴ The Ephesian Artemis and the bee on the reverse of the Gortynian tetradrachm, probably issued after the conquest of the island by Metellus, may have been simply copied from gold coins of Ephesns (Zeit. für Num., x., 1883, p. 119 f.), and can searcely indicate that a cultas of that particular divinity existed even at Gortyna.

infancy bees play a part of some importance. The bee occurs as a Cretan coin-type at Aptera (Æ. obv. head of Artemis of Aptera); at Praesus (Æ. obv. head of Persephone), and at Hyrtacina (Æ. obv. goat's head and arrowhead).

Rev.—Naked male figure (Apollo?) standing, holding in r. stone, in l. bow.

Æ. 65. Brit. Mus. [Pl. II., No. 1.]

A coin similar to the present, but reading EP, is engraved in Combo's Catalogue of the Hunter Collection,70 and is there assigned to Erythraca, in Crete, a place about which there is little known, except that Florus (iii. 7) mentions it along with Cydonia and Cnossus as submitting to Metellus. A coin with similar types, but bearing no inscription, is classed by Leake under Eleuthernae, to which the type of the reverse would be particularly appropriate. I believe that our British Museum coin would also be rightly attributed to Eleuthernae, and that the reading E P of the Hunter specimen is probably incorrect, for the second letter on our coin, though not quite distinct, is certainly a A rather than a P. Admiral Spratt, in his Travels,77 speaks of a coin of Eleuthernao which has a bunch of grapes as a type, and in his mention of it he seems to imply that it was found in the neighbourhood of that town.

GORTYNA.

1. Obv.—NVT9♦Λ. Bull reclining r., looking back.

Rev.— > > T Within linear frame, lion's scalp; the whole in incuse square.

R. ·65. Wt. 86·6 grs. Brit. Mus. [Pl. II., No. 7.]

Gortyna has a considerable number of specimens belonging to our first period. The early coin, formerly in the Fox collection, with the legend Γορτύνος τὸ παϊμα, is well known and need not here be discussed (see below under "Phaestus," and Fox, Engravings of unedited or rare Greek Coins, Pt. I. pl. x., No. 109; Revue Numismatique, 1864, p. 103 f.) Another Gortynian coin of the Fox Collection has types precisely like those of the British Museum specimen here described. General Fox does not state that this coin bears any inscription, but from the engraving given of it,79 it may be inferred that it was inscribed, at any rate on the obverse. The reverse legend of our coin is very imperfect, the only letters which are tolerably clear being JOT, but there are traces of an inscription on the right side of the coin, and the legend was probably continued on the left side also, the complete that is, Γορτύνος τὸ παΐμα.

The familiar silver coins with Europa seated in the sacred plane-tree and with the bull for reverse (cp. Pl. I. Nos. 1—3) may be assigned with considerable certainty to our second period (s.c. 431—300). Some of them are re-struck on coins of Cnossus⁸⁰ with the Minotaur and

⁷⁶ Pt. I. No. 108.

⁷⁹ Pl. x. No. 108.

²⁰ Zeit. für Num., iv. p. 338; a specimen in Brit. Mus.

labyrinth types and a deep square depression in each cerner; but the greater number on coins of Cyrcne81 having as ebverse type the bearded head of Zeus Ammen, and as reverse, the Silphium, which may he assigned to B.C. 400-322. The Eurepa types of Gertyna de not seem to need discussion here, especially as the representation of Europa in art has been made the subject of learned essays by Stephani and Otto Jahn, and a chapter is devoted to it in the Kunstmythologie of Overbeck. 62 There is, however, one didrachm in the British Museum with Europa in the tree, which ought not to he left unneticed. It is of the erdinary types, except that partly in the field of the coin and partly en the trunk of the tree are tho letters 209 VM S T, which Dr. ven Sallet, who has engraved the specimen in the Zeitschrift für Numismatik (vel. vi. p. 263), reads, and it would seem quito correctly, as Turvool. Dr. ven Sallet prepeses to connect this inscription with the Cretan meuntain Tirupos, though, as he admits that Meunt Tituros was some distance frem Gertyna, and that there is ne direct mention of its heing connected with Europa, his explanation cannot he regarded as altogether satisfactory. An ingeuious suggestion has been made by Mr. R. Stuart Poole that the letters of this inscription are intended to represent some actual graffiti left hy wershippers who visited the sacred Gortynian plane-tree. known 83 that the Greek, no less than the Shakespearian, lovers delighted to carve on every tree the names of their Rosalinds; but against Mr. Poole's suggestion it may

ei Zeit. für Num. iv. 888; specimens in Brit. Mas.

Vel. ii. (" Zeus "); cp. Gardner, Types, pp. 164, 165.
Bötticher, Baumcultus, p. 53.

fairly be urged that the Greeks would hardly have ventured to ent words or names upon a sacred tree, and it might also be objected that the inscription in question is not entirely confined to the tree (as a graffito would be), hut partly appears in the field of the coin. The only Greek word of which Dr. von Sallet's reading τωνροι is suggestive is Τίτυροι, the Doric form of Σάτυροι; though, according to Strabo, ** the Τίτυροι are to be distinguished among the Dionysian followers from the Σάτυροι and Σωλήνοι. Within the same period as the Europa didrachms would also fall the drachms and hemidrachms of Cretan style and weight which have generally been assigned to Euboea, but which Dr. Imhoof Blumer has lately restored to Gortyna.

Most of the other coins of Gortyna belong to our last period (B.C. 200-67.) An interesting tetradrachm of light Attic weight, with obv., diademed head of Zeus or Minos; rev., Athene standing, holding Victory, has

⁸⁴ x. 466, 468, 470.

⁴³ Monnaies Greeques, 1883, pp. 215, 216, and p. 223. This elassification is very satisfactory, as we thereby eliminate from the Euhocan coinago specimens which are of Aeginetic weight and of Cretan work. Dr. Imhoof-Blumer still, however, leaves Euboea a didrachm of which the style is Cretau and the weight Aeginetic: -Obv., Tôte de femme, les cheveux relevés, à dr.; devant elle, EVB. (EvB); carré creux. Rev., Taureau couché à g., retournant la tête. Cabinet de France. R. 23^m. Gr. 11,92 (Imhoof-Blumer, Monn. Grec., p. 223, No. 70). In counection with this coin Prof. Percy Gardner has made a very acute suggestion, which ho kindly allows me to communicate here. The inscription EVB (Euß) be reads EVR (Eup), which would thus be a legend explanatory of the female head-Europa. This reading would obviate the only remaining difficulty in the assignment of the coin to Crete. Moreover, on the reverse, thero appear to be traces of another legend, which, if it were perfectly legible, would doubtless give the name of the issuers-probably the Gortyuiaus, for whose coinage the types of Europa, and a reclining bull looking back, would be especially suitable.

been published by Mr. Head. 96 It has the inscription ΓΟΡΤΥΝΙΩΝ ΘΙΒΟΣ, the second word being, perhaps, merely a magistrate's name, though it is not given as a proper name in the second edition of Pape's Worterbuch der Griechischen Eigennamen. Tho reverse type of this coin and the roverso of the corresponding specimens in copper, Athene standing holding serpent (obv. head of Zeus) are perhaps almost the only evidence of the existence of the worship of Athene at Gortyna. Her presence on these coins also gives a slight clue to the identification of a curious unpublished relief, evidently votive, which was found at Gortyna and is now in the British Museum. It represents a female figure trampling on a diminutive male personage; on her right is a serpent creet, and on her left a winged monster, probably a griffin. The female figure is now unfortunately headless, but the drapery and the scrpent would suggest Athene as the goddess represented, while the male figure may be one of her giant foes reduced in physical size-according to a well-known convention of ancient art-on account of his comparative inferiority to the divine Athenc. The types of the Gortynian coinage in the earlier periods refer almost exclusively to the myth of Europa and Zeus; in this last period, however, we can trace on the coins several other important divinities of the place. The bearded head bound with tho diadem is more likely to be that of Zeus Hecatombaios88 than of Minos, especially as on other coins of this time

67 Θιβος is also found on a smaller silver coin of the same period (Mion., ii. p. 280, No. 179).

« Hesych. s.v. Έκατόμβαιος; cp. Ptolem. Hephrest., Nov.

wo find it wreathed with laurel (Mion. ii., p. 280, No. 177). On the hronze enins⁸³ wn find also heads of Artemis, Hermes, and Apolla, in which we may see the Artemis Britomartis, the Hermes Hedas, and the Apollo Pythios of the place.⁹⁰ The name of the male figure seated on a rock and holding how and arrows is doubtful (Pl. II., No. 9, rev.; obv. head of diademed Zeus r.; Brit. Mus. R.); but perhaps it is the hunter Apollo rather than Herakles. The warrior with shield and spear who is seen on silver coins of the same class,⁹¹ it is also difficult to name, unless he be Gortys,⁹² the reputed founder of the place.

ITANUS.

- Obv.—Bearded male figure r., with hndy ending in fish's tail, striking r. with an object (fish?) held in his r. hand, his l. raised.
 - Rev.—Within linear square, ornamented star; the whole in incuse square.
 - R. 95. Wt. 180.5 grs. Brit. Mus. [Pl. II., Nn. 10.]
- Obr.—Bearded male figure r., with hndy ending in fish's tail, striking r. with trident, and holding in l. fish by its tail.
 - Rev.—Withiu linear square, star, with pellets between each ray; the whnle in incuse square.
- R. 1.05. Wt. 174 grs. Brit. Mus. [Pl. II., Nn. 11.]
- 3. Obv.—Similar figure striking r. with trident, his l. raisod.
 - Rev.-Within linear square, nrnamented star.
 - At. . 95. Wt. 177 9 grs. Brit. Mus. [Pl. II., No. 12, rev.]

- 4. Obv. Similar, but finer style.
 - Rev.—ITA. Two sea monsters facing one another; the whole in circular incuse.
 - R. 1. Wt. 178.7 grs. Brit. Mus., see Head, Guide,
 Pl. 14, 36; P. Gardner, Types, Pl. IX., Fig. 1.
- Obv.—Similar figure, with 1. upraised and striking with trident held in r. at fish swimming downwards.
 - Rev.-ITANION. Two sea monsters facing one another.
 - R. 1.05. Wt. 175.7 grs. Brit. Mas. [Pl. II., No. 14.]

No. 1, which is of lumpy fabric, must belong to our first period; Nos. 2—5 to the earlier part of our second. The figure on the obverse is perhaps Triton or Glaucus; or possibly we have a Phænician deity of the Dagon class. The monsters on the reverses of Nos. 4 and 5 are doubtless connected with this divinity, and are akin to the sea monsters which appear, e.g. as symbols on coins of Poseidonia. The other coins of Itanus belouging to our second period are tolerably numerous; they have as obverse type the head of Pallas, and for the reverse an eagle or a star. The copper coin here described was obtained by the Museum from Mr. Potrides, and may be assigned to Itanus. It is perhaps not later than n.c. 300:—

6. Obv.-Head of Apollo r., laureate.

Rev.—Star of eight rays within linear square.

Æ. ·45. Brit. Mas. Coll.

²⁵ Cp. Rev. Num., 1845, p. 5 ff.

LATUS.

 Obv.—Female head l., with hair tied in bunch behind; border of dots.

Rev.—ΛΑΤΙΩΝ. Hermes walking r., holding caduceus, and wearing short chiton, petasus and talaria.

Æ. 55. Brit. Mus. Coll. [Pl. II., No. 19.] (Cp. Mion., t. ii. p. 286.)

Dr. Imhoof-Blumer publishes in his Monnaies Greeques⁹⁵ another bronze coin of this place:—

Obv.-Tête d'Artemis, ceinte d'une stephane, à g.

Rev.—A A. Buste drapé de Hermes, coiffe de petase aile, dans un carré creux.

Æ. 10^{m.} Gr. 1,32.

The head on the obverses of these coins is perhaps intended for that of the goddess Eileithyia, of whom there was a temple at Latus (see C. I. G. No. 3058, and Bulletin de Corr. Hell., iii. p. 293). In the record of an alliance between Latus and Olus we find the Latians swearing by Hermes among other deities (see C. I. G. No. 2554).

LYTTUS.

8. Obr .- Female head r.

Rer.—Eagle standing 1.

Æ. 45. Brit. Mns. [Pl. III., No. 4.]

The attribution to Lyttus of the two early coins with obv. bear's head, and rev. incuse square, in Das Königliche Münzkabinet (Nos. 12, 13), cannot be regarded as certain. Nos. 1—3 in our list may be given to our second period (B.C. 431—300), though it may be doubted whether the upward limit ought not to be placed somewhat higher, especially for No. 2, which has not only the early forms A, S, O, but is of lumpy fabric, and shows a standing, vol. iv. There series.

not a flying eagle. No. 3 comes in, of course, later on in this period, Λ , Y, I, taking the place of Γ , V, and S. Nos. 4—8 belong to a still later time, and may be assigned to a period B.c. 300—220. In the last-named year the Cnossians surprised Lyttus and utterly destroyed it, so that the citizens abandoned it and took refuge at Lampa. Some writers consider that the city was soon rebuilt, and it was certainly existing at the time of the Roman conquest (B.C. 67), and at a later date. None of the Lyttian coins necessarily belong to a time later than B.C. 220, and it would seem that after the complete destruction of their city in that year the Lyttians issued no further currency.

Of the two constant types of Lyttus, the boar's head and the eagle, it is difficult to explain the former; the cagle has evidently reference to Zeus, for according to the Theogony of Hesiod (477) it was in a cave of Mount Ægæon, near Lyttus, that Rhea gave birth to Zeus, and there are other traces of the presence of this god at Lyttus.⁹⁶

Orus.

- Obc.—Head of Britomartis I., wearing earring and necklace; bair tied in hunch behind, bound with tania, above which is a laurel wreath; at her shoulder, quiver; ? drapery on neck.
 - Rev.—οΛοΝΤΙΩΝ. Zens scated l. on throne wearing himation over lower limbs; in his outstrotched r. he holds eagle; his l. rests on sceptro; border of dots.
 - R. 1. Wt. 164.1 grs. Brit. Mus. [Pl. III., No. 2.]

found on the site of Lyttus the lower half of a colossal statue of Jupiter, known by an eagle sculptured behind the feet of the figure." Zeus is mentioned in the fragment of an inscription recording an alliance between Lyttus and Olus, published in the Hermes, iv. 266 ff.

A similar coin is described by Mionnet, ⁹⁷ and there is a specimen in the Huuter Collection. ²⁸ The head is evidently that of Britomartis, who had a temple in the city, and of whom there was a wooden image attributed to Daedalus. ⁹⁹ The curious style of the obverse might seem to claim for the specimen a place among the characteristic Cretan coins of our second period (n.c. 431—300), but the reverse ¹⁰⁰ shows at once that it is posterior to Alexander, and it is safer to assign it to a period B.C. 300—200, within which would also fall three other coins which have been made known by previous writers.

(a) A silver coin, now at Berlin, published by Dr. J. Friedlaender (Berl. Blätt. iii. p. 11):—

Obv.—Head of Artemis 1., wearing a hand adorned with laurel leaves; behind her neck, quiver.

Rev. _ in a wreath.

Wt. 2.2 grammes.

(β) A silver coin published by Dr. Imhoof-Blumer in his Monnaies Greeques (p. 218), which he attributes to Olus on account of the head of the obverse, which he says is identical in style with that of the didrachms of Olus.

Ohr.—Head of Artemis laureate, and wearing "bandeau," earrings and necklaco; at her shoulder, quiver; neck draped.

Rer.-Star in concave field.

At. 18th Gr. 0,73.

⁹⁷ T. ii, p. 289, No. 243.

⁹⁸ Comhe's Catalogue, pl. xl. 18.

Paus., x. 40, 3.
 The people of Olus had a temple of Zeus Tallaus. See Bull. de Corr. Hell., iii. p. 293.

(γ) A small bronze coin given in Mionnet, ii. p. 289, No. 244:—

Obv .- Head of "Diana" r.

Rev.—OAONTI. Jupiter Aëtophorus seated l., spear (haste) in left hand.

Æ. 2.

To this period also we ought probably to attribute the following bronze coins in the British Museum:—

 Obr.—Head of Britomartis r., hair tied in bunch behind; border of dots.

Rer.—OAN beneath, dolphin r.; the whole in incuse square.

Æ. ·45. Brit. Mus. [Pl. III., No. 5.]

3. Obv.—Head r. (? Britomartis); border of dots.

Rev.- \$\infty\$ beneath, dolphin 1.; border of dots.

Æ. 4. Brit. Mus.

A specimen in the Berlin Museum, similar to No. 2, has been published by Dr. Friedlaender, 101 and, according to him, it reads $\circ \wedge \Gamma$; the last letter is not very clear on the British Museum example, but I believe it to be meant for N, i.e. OAON[T! Ω N], and Leake also gives a similar specimen reading N and not Γ (Num. Hell., "Islands," Suppl. p. 166, "Olus"). The delphin may be a symbol of Apollo Delphinios, the existence of whose worship at Olus is perhaps to be inferred from the fact that one of the months was locally named $\Delta \epsilon \lambda \phi i \nu \iota \sigma$ (Bull. de Corr. Hell. iii. p. 304; cp. p. 308).

¹⁰¹ Zeit. für Num., vi. 11.

PHAESTUS.

The town of Phaestus has a considerable series of silver coins belonging for the most part to our second period. It is one of the Cretan localities mentioned in Homer, and as the remarkable unpublished coin about to be described seems to indicate, it must have been a place of importance in early times.

 Obr.—Europa seated on bull, which advances 1.; her r. stretched out to bull's head, her l. resting on its back.

Rev.—A M ≥ A OOTIO ≥ TM ≥ A[] [Φαιστίων τὸ παίμα] in four lines around linear frame in which is liou's head facing; the whole in incuse square.

R. ·85. Wt. 183·2 grs. Brit. Mus. [Pl. III., No. 6.]

This coiu was acquired by the British Museum in 1882 from M. Lambros. It was sold as a coin of Gortyna, and indeed it hears a very close resemblance to the famous coin of the Fox Collection reading Γορτύνος τὸ παίμα (see ahove, p. 34), only that on the latter coin the bull is moving towards the right. The inscription is not very easily read, but after a close examination of it I have been able to deciphor the legend, Φαιστίων τὸ παίμα, and to assign the coin to Phaestus. The most important letter in this inscription is the character which is the equivalent of # and φ. On the Fox coin of Gortyna the form > occurs, and this, though at first supposed to he equivalent to Σ , is certainly, as M. Lenormant 102 has suggested, Π-παίμα, not oraqua. On our coin the first letter is, unfortunately, almost entirely obliterated: the initial letter of the third word (παίμα) seems to have a horizontal bar, thus 3; but

¹⁰² Rev. Num., 1864, p. 103 f.

this may be accidental, and the letter is perhaps simply), as the form) is equivalent to Π in an archaio lapidary inscription of Gortyna, 103 and on later coins of Phaestus itself. Of the other letters on our coin, A, \geq (= 1), M (= Σ), O (nearly \diamondsuit), $\mathcal{N} (= \mathbb{N})$ \mathcal{M} (obscure $= \mathbb{M}$) are found also on the archaic Gortynian coin. The Gortynian lapidary inscription has A for our A and 2 for >. What precise political or religious relations are pointed to hy the adoption both hy Gortyna and Phaestus of coins with exactly similar types it is difficult to say. The type of Europa is of course the natural emblem of Gortyna, hut the lion'a head, though it occurs on several early coins of that city, has, so far as can be ascertained, no auch close connection with the religious myths of the place. It is just possible that the liou's head may be really the property of the Phaestians, to whom, as a symbol of their divinity Herakles, it would be appropriate.

This is, of course, the only archaic coin of Phaestus at present known. At the head of the coins of the second period, B.c. 431—300, may stand the following:—

- 2. Obr.—... STMSAD [patort...]. Europa wearing chiton and mantle over lower limbs, seated (on rocks?) towards 1., welcoming with hor upraised r. hand bull which is advancing; border of dots.
 - Rev.—Youthful male figure, wearing mantle over lower limbs, seated l.; his r. hand slightly raised, and holding [? caduceus]; behind him, uncertain object.
 - R. 1.2. Wt. 172.6 grs. [Pl. III., No. 9.]

This coin was lately purchased from M. Lamhros by my friend Dr. Hermann Weber, its present owner, who is so

¹⁶³ Thénon ia Rev. Arch., vol. viü. N.S., p. 444; Bréal, Rev. Arch., vol. xxxvi. N.S., p. 346 f.

good as to allow mo to publish it here. Though of much interest it is not absolutely new to numismatists, as a similar specimen is engraved (not vory satisfactorily) in Streber's Numismata ex Musco Regis Bavariæ. 104 Streber's coin 105 is apparently ro-struck on an early coin of Cnossus with the Minetaur and labyrinth types, as in the cugraving of the reverse there are visible two square indentations, such as appear on Cnossian coins with those types. On grounds of style, and especially after a comparison with the coins of Gortyna, we should be led to date our specimen about B.c. 430. The design of the obverso is certainly pleasing, though the execution, especially of the male and female figures, is very poor and touched I am inclined to think that this coin with barbarism. was copied from a succimen produced by a superior artist of the same city, whose power of execution, especially his skill in producing rich and delicate folds of drapery, were far above those of his humbler imitator, and this coin probably stands to its prototype in the same relation as the coin of Gortyna (Pl. I. No. 1) does to its prototype in Pl. I. No. 2. That the female figure is Europa and the bull Zous there can be little doubt, and this type taken together with the obverse type of the archaic coin of Phaestus (No. 1) shows that the Europa myth was not unfamiliar to the Phaestians, though it leaves no trace on their later coinage. The first letter of the retrograde inscription is given by Streber as 3, but on the present specimen it seems to be), though it is not quite clear. The reverse of the coin is, unfortunately, in very poor condition, and Streber's eugraving is very slight, and

¹⁰⁴ Pl. ii. 5; p. 161 f.

¹⁴a Cp. Overbeck, Kuntsmythologie, vol. ii. p. 462.

probably taken from a bad specimea. He describes the figure as "Mercurius ad sin. sellæ insidens dextera caduceum oblongum tenet; in dorso petasus dependet." Of the caduceus and petasus, the attributes by which this figure is identified as Hermes, there are the very faintest traces on Dr. Weber's coin, and apparently only slight traces on the Bayarian coin, so that the name of the youtbful figure must remain uncertain: the analogy of the Felxaros type at Phaestus might lead us to suggest the youthful Zeus as the deity represented. Sestini described the figure on Streber's coin as sitting "in sella rustica cum dorsali." He appears on our coins rather to be seated on a rock, with which the curious object behind has no connection. On other coins of this period the divinity most frequently represented is Herakles. We do not learn from other sources that he was especially honoured with worship at Pbaestus, though the eponymous hero Phaestus was said to be a grandson of the boro. 106 First in order are the coins with the inscription NONITMIA), having for obverse the standing figure of Herakles holding club and bow, and for the reverse a bull with its legs tied.107 A specimen in the British Museum is re-struck on one of the coins of Cnossus with the four square depressions and Minotaur and labyrintb types. The other coins, with Herakles standing or seated, need not be minutely described. The fine coin with Horakles and the hydra, photographed by Mr. Head, Guide, Pl. 14, 38, is, as usual in Crete, followed by several inferior copies, of which there are specimens in the British Museum. Of the remarkable

¹⁰⁸ Paus., ü. 6, 7; cp. Steph. Byz., s.r. φαιστός.

¹⁰⁷ One specimen in the Brit. Mus., weight 180 grains, has ree. large hucraulum.

coin inscribed on the obverse ΓΕΛΧΑΝΟΣ, and showing a youthful figure holding a cock, there are two specimens in the British Museum. (Head, Guide, Pl. 14, 37). One with reverse \$\Phi A1\ST (retrograde) and bull walking l., is re-struck on a coin of Cyreno with the head of the bearded Ammon; reverse, silphium: the other specimen has as its reverse ϕ Al ≤T and the bull butting r. within an olive-wreath. Overbeck in his Kunstmythologie 108 accepts the identification of the figure of the obverse with the youthful Zeus of Creto. This identification rests on a passage in Hesyehius, in which the word Pedxavoc (probably intended for Fέλχανος) is explained as 'O Ζεὺς παρὰ Κρησίν. 100 The British Museum specimen of the didrachm with the winged Talos has been published by Mr. Head in his Guide (Pl. 23, 40). The last letter of the obverse inscription is not quite perfect; it should be read TAΛΩN not $TA\Lambda\Omega\Sigma$, as there given. 110

There are several smaller denominations of silver coins belonging to this period:—the draehms referred to by Kenner, with obverse, youthful male head ΦΑΙΣ (? Herakles or Talos); and reverse, bull's head, or bull's head in clive wreath. The British Museum has a specimen of this class, as well as two pieces with somewhat similar types, of which the heads are barbarous. The Museum also possesses the following:—

¹⁰⁸ Vol. ii. "Zeus," p. 197.

¹⁰⁰ On this type cp. Overbeck, loc. cit.; R. P. Socchi, Sul Giore Γελχανος in the Proceed. of Accademia arch. di Roma, 1840; Welcker, Griech.  Obv.—ΦΑΙΣ (retrograde). Youthful male head l., with hair ehort (? Heraklee or Talos); border of dots.

Rev .- Bucranium ; border of dots.

R. .55. Wt. 48.1 grs. [Pl. III., No. 7.]

 Obv.—Yonthful male head r. (? Herekles or Talos); border of dots.

Rev.—Bucranium; border of dots.

A. . 65. Wt. 46.9 grs.

The head on this coin is somewhat barbarous; it is restruck, possibly on a coin of Ægina.

5. Obv.-Youthful male head r. (? Heraklee or Talos).

Rev. - Bucranium.

AR. ·6. Wt. 40·4 grs. [Pl. HI., No. 8.]

- Another epecimen, with types similar to No. 5, ehows marke of re-striking. Wt. 43 7 grs.
- Ohr.—Youthful male head I. (barbarous work—Herakles or Talos?).

Rev.-Bucranium within circular depression.

R. 4. Wt. 12.8 grs.

 Ohr.—Youthful male head r. (barbarous work—Herakles or Talos?).

Rev. - Similar to No. 7.

A. Wt. 12.7 grs.

Nos. 4—7, though uninscribed, may be fairly attributed to Phaestus; 7 and 8 were acquired from Mr. Petrides. Last in the series of Phaestus must be placed the bronze coins representing Talos hurling a stone and on the reverse a dog (see Pl. III. No. 11). These types have been neatly explained in a paper by Baron de Witte. 112

¹¹² Rev. Num. 1840, p. 188, ff.

On the obverse he sees the winged Talos, gnardian of Crete, whose function it was to periodically perambulate the island; on the reverse, the golden dog made-like the Man of Brass himself-hy Hephnistos and set as a protector to the infant Zous in Crote and afterwards to the Temple of Zeus.113 Talos, as we have seen, appears on coins of Phaestus as Talon, and is provided with wings, a detail not mentioned by the mythographers. On the copper specimens ho is represented rushing forward, hurling a stone, perhaps to oppose the landing of the Argenauts or some other strangers who are nearing the shore. According to another account, the Man of Brass was accustomed to heat himself red hot and then to lock his victims in his flory embrace, but of this unpleasant mothod of proceduro the coins afford no illustration.

The bronzo pieces of Phaestus seem to belong to the third century, for as they have the lunated form of Σ , (Φ AICTI Ω N), they can hardly be earlier than s.c. 300. We know that Phaestus was destroyed by the Gortynians, though the exact date of its destruction is not recorded. To judge from the numismatic evidence, it may have taken place towards the end of the third century s.c.

PHALASARNA.

A didrachm of this town in the British Museum with obv., head of Artemis Diktynna; rev., ΦA , trident, is countermarked with an object which appears to be intended for a pomogranate. A similar countermark occurs on a didrachm of Cnossus in the British Museum (obv. head of Demeter, r.; rev. labyrinth of mæander pattern, in

According to Philostratus, Vit. Apoll., viii. 80, a certain Cretan temple of Diktynna was guarded by dogs.

centre of which, star; in each angle, crescent), assignable to the period B.C. 431—350; on a didrachm of Gortyna with Europa in the tree 114 (B.C. 431—300), and on a didrachm of Eleutherne, bolonging to the same period, of which there is a specimen among Mionnet's casts (ep. ii. p. 276, No. 146). This countermark may therefore indicate, as a date for the Phalasarna didrachms, our period B.C. 431—300, a date probable also on grounds of style. Dr. Friedlaender 115 states that three of the smaller coins of Phalasarna, in the Berlin Museum, are re-struck on coins of Argos, but he does not distinctly indicate to what period of the Argive coinage the latter pieces belong.

POLYRHENIUM.

 Obv.—Head of Artomis Diktynna 1., wearing earring and necklace; hair rolled; before the head in small letters ΓΥΘΟΔ[ΩΡΟΥ].

Rev.-Filleted bueranium, facing; border of dots.

R. '65. Wt. 41.9 grs. Brit. Mus. [Pi, I., No. 7.]

Obv.—Similar to No. 1; before the head in small letters [ΓΥΘΟ]ΔΩΡΟΥ.

Rev.—Similar to No. 1.

R. '65. Wt. 87'1 grs. Brit, Mns.

 Obr.—Head of Artemis Diktynna 1., with hair in sakkos, wearing earning and nocklace.

Rer .- Similar to No. 1.

At. . 65. Wt. 39.2 grs. Brit. Mus. [Pl. I., No. 8, obv.]

These three coins show traces of having been ro-struck, thoughou what specimens it is perhaps impossible to discern.

Annuaire de la Soc, franç. de Num., iii. p. 31.
 Zeit. für Num., iv. p. 339.

Of the artist Pythodoros who worked also at Aptera we have already spoken (p. 13). It is not improbable that No. 3 is also by him, though it is an signed. Dr. Imhoof-Blumer mentions (Mon. Gr. p. 218, Nos. 36, 37) a specimen at Stuttgart, similar to No. 1, but reading FOA, a legend which serves to identify the uninscribed coins of Polyrhenium. Nos. 1—3, I would assign to the period B.C. 400—330, making the succeeding period of the Polyrhenian coinage B.C. 330—280, of which the principal coins would be (in silver) those with the Zeus and bueranium and spear and bueranium types (cp. Zeit. f. Num., iv. p. 338), and the copper pieces with devices of a kindred nature. The following bronze coin, obtained by the British Museum from Mr. Petrides, may possibly fall within the same period, on account of its reverse type:—

4. Obv.-Head of Pallas r., wearing crested helmet.

Ilev.—POAYPHNI. Filleted bucranium, facing. Æ. '65. Brit. Mus. (Cp. a coin in Rev. Num., 1848, p. 480.)

At the head of a third period, B.C. 220—67, I would place the remarkable specimen photographed in Pl. III., No. 10 (obv. only), which has been already published by Mr. Head (Guide. Pl. 32, 26; ep. Mion. ii., p. 293, No. 280) and Prof. Gardner (Types, Pl. XII., p. 204), having for its reverse type a female figure seated and holding out a winged Victory, and for its obverse a male head, beardless, but with whisker, and at the shoulder bow and quiver. This effigy is considered, both by Mr. Gardner and Mr. Head, to be an Apollo, though, as the former points out, it is obviously the head of some human personage in the character of that god, for we cannot certainly admit a barbatus Apollo. Mr. Gardner is rather inclined to think

that the personage here represented is Perseus, King of Macedon, though our coin does not bear a very striking likeness either to Perseus or to Pbilip V. of Macedon, another possible claimant. I should myself venture to prefer Philip, especially as we know that about B.c. 220 he had relations with the people of Polyrhenium. In that year the Polyrbenians united themselves with other Cretan cities to succour Lyttus, which was then attacked by Cnossus. Lyttus was destroyed, but the Polyrhenians and their allies continued the war against Cnossus, Gortyna, Cydonia, Aptera, and Eleuthernæ. The Cnossian party was aided by Ætolian auxiliaries, and the Polyrhenians consequently turned for aid to Philip of Macedon, the enemy of the Ætolinns. A reinforcement was despatched, and the Polyrhenian league was victorious. 116 To our assigning the silver coin to this period its style and weight (light Attic, not Æginetan) would present no obstacles, and though Mr. Head in his Guide has included the coin in his Fourth Period (s.c. 336-280), he is now inclined, as he informs me, to allow a later date for it. The god is no doubt rightly called Apollo-the hunter Apollo-who must also be the god represented on the smaller silver coins of the same place and period, specimens of which show as their reverse a youthful male figure wearing a chlamys, advancing to the left, and holding in his left hand a how, and for the ohverse a head of Artemis, with bow and quiver at her shoulder. Probably the seated figure holding a Victory, which forms the reverse of the tetradrachm, is also Artemis (Diktynna), who, according to Strabo, 117 had a temple at Polyrhenium.

¹¹⁶ Cp. Thénon in Rev. Arch., xv. (N.S.) p. 426.
¹¹⁷ x. 479.

PRAESUS.

Obv. -- Gorgoneion.

Rev.—Within linear compartment, youthful male figure, wearing chlamys which flies hehind, kneeling r., and shooting with bow; the whole in incuse square.

R. '95. Wt. 182.5 grs. Brit. Mus. [Pl. III., No. 13.]

This remarkable unpublished coin was purchased by the trustees of the British Museum, in 1876, from Mr. A. J. Lawson. I do not know if there is any distinct record of its having been found in Crete, but in the same purchase thore were included two other coins, undoubtedly of Creto, and it was bought at the time as a coin of Praesus. Its weight (Ægincfan) would be suitable for Crete, and its reverse type is strikingly like that of undoubted coins of Praesus. The Gorgon head is very curious, and is, so far as I am aware, found nowhere elso in the coinage of Crete. The earliest coins previously known of Praesus are inscribed, and have for obverse a youthful malo figure shooting, and for reverso, a bird. These types bave been called by Dr. Kenner a local horo and a dovo; by Dr. Imboof-Blumer, Herakles and a Stymphalian bird. That the figure is Herakles is not improbable, especially as that god appears on another coin of Praesus holding his bow and club.118 There seems to be no special reason for calling the bird on the reverse a Stymphalian bird; I should rather see in it an eagle-the representative of that Zeus Diktaios who had a templo in the territory of Pracsus,119 and who appears in his own person on later

 ¹¹⁸ Imhoof-Blumer, Mon. Grec., p. 219. The hunter Apello might also perhaps put in a claim for the obverse.
 ¹¹⁹ Cp. Bursian, Geog., ii. 576.

coins of the place, enthroned, and holding sceptre and eagle.

Praesus was destroyed by the Hierapytninus, hut the exact date of its destruction is not known. Its silver coins do not seem to be much later than B.C. 300, though there is a hronzo piece with obverse, head of Apollo, and reverse, thunderbolt, which may be later. According to Mionnet, it has C for Σ , but the form of this letter on the British Museum specimen is unfortunately uncertain.

PRIANSUS.

The obverse type of the didrachms with a female figure seated under a palm-tree caressing a serpent has been discussed by Prof. Gardner in his Types of Greek Coins (p. 162). He decides, as M. Lenormaut 120 has also done independently, that the figure is less likely to be Hygieia than the goddess Persephone (mother of the Cretan Zagreus), visited by Zeus under the form of a serpent. It may be added that on one of these didrachms in the British Museum the female figure certainly wears a wreath, which would be a small additional argument in favour of her heing Persephone (cp. Mion., Sup. t. iv., pl. xi., 2.)

THALASSA.

A Cretan town Thalassa is not mentioned in Bursian's Geographie, but in a well-known passage of the Acts of the Apostles, describing the journeys of St. Paul, the Vulgate 121 has the words "Venimus in locum quendam qui vocatur

¹²⁰ Gazette Archéol., 1879, p. 24; cp. a gem in Overbeck (Griech. Kunstnythologie, Bd. 3, Gemmentafel iv. 9), called by him Demeter, ib. p. 507.

¹⁷¹ Act. Apost., 27, 8.

Boni Portus cui juxta erat civitas Thalassa." The reading of Codex A in the corresponding passage is Πόλις Αλασσα, and of the Sinaīticus, Λασσαία. Have we then any coins of this Thalassa, Alassa, or Lassaca? Leake 122 distinctly says that "coins of Thalassa are not uncommon in that part of Crete," i.e. on the southern coast, near St. Paul's Fair Havens. He cites, however, only three specimens (in copper), two of which bear no indication of their mint place, the other heing:—

Obv.—KAICAP AOMITIANOC. Head of Domitian r.

Rev.—€∏! N€OKY∆OY ⊕A. Jupiter seated 1.; holding in r. two ears of corn; 1. resting upon hasta.

Æ.

Coins similar to these wore attributed to Thalassa, first hy Sestini and then hy Dr. Kenner. Sestini (ep. Mionnet, Sup. t. iv., p. 345) also gives a coin reading Εαλασηων. It is doubtful, however, whother this latter reading is to be trusted, and from the evidence of a specimen in the British Museum similar to Leake's just described, I also doubt the reading ΘΑ. The inscription in large letters on the reverse of the Museum specimon is ΕΠΙ ΝΕΟΚΥΔΟΥ ΘΑ, but at the back of the seat of "Jupiter" is a small P (probably overlooked by Leake and others) placed thus, τ, there being no room for it with the rest of the legend, so that the full inscription is probably not ΘΑ, but ΘΑΡ. The attribution of these

¹² Num. Hell., s.n. "Thalassa."

Die Münzsamml. d. St. St. Flor., p. 101, f. Kenner, I may point ont, is wrong in saying that Steph. Byz. mentions "Thalassa" as a Cretan town.

coins to a Cretan town, Thalassa, must therefore be considered as extremely uncertain.

IMPERIAL COINS.

The Imperial coins which bear the names of Cretan cities, or which are inscribed KOINON KPHTΩN, present no difficulties. The class of small bronze coins having for reverse an altar, a tripod, or a basket between two torches, was assigned to the Κοινόν of Crete by Eckhel on account of their bearing the letters K K. This attribution is doubtless correct: a specimen in the British Muscum with the basket and torches was obtained from Mr. Petrides.

Several other Imperial coins, both in silver and copper, with the beads of the earlier Emperors, have been assigned to the Cretan Kowóv or to Thalassa (cp. Mion., Sup. t. iv. p. 345, ff. and reff. to vol. vi.; Leake, Sup. "Islands," p. 160), but as they do not bear any inscription indicative of the locality where they were issued, their attribution must be considered doubtful, at any rate until any trustworthy evidence be brought forward of their having been found in Crete.

WARWICK WROTH.

H.

NOTE ON AN UNPUBLISHED PENNY OF WILLIAM I.
AND ON THE WORD PAX.

THE above is an engraving of a penny of William I., lately in the collection of Mr. Addington, and now in mine. which deserves more than a passing notice. The obverse corresponds with that of Hks. 239; the reverse is similar to that of the pennies of Harold II., and has not been hefore observed in connection with any coin of William I. or II. The moneyer is LEOFIIILD . OM (sic) LÆPE, i.e. Lewes. Coins of Lewes of the type of this obverse are known, but the moneyer is now, unless he be the same as LEOFPOLD of Winchester, whose name appears differently spelt on various types of this reign. The word PAX on the reverse is written across the field of the inner circle, between two parallel straight lines. Both the inner circle and these lines are formed of beaded dots, and after the name of the mint occur two points in the form of a colon, which constitute a refinement of design that I have failed to find on any other coin of either Harold or

This cat is kindly centribated by Mr. Mentagu.-EDS.

his two immediate successors, though it occurs both previously and subsequently.

Having regard to the nature of the reverse one would naturally imagine that this penny was coined acon, if not immediately, after the Conquest. If, however, on further consideration, it be determined that it did not see the light until a period considerably later than this, there is room for reflection as to the rules by which we sometimes consent to be guided in assigning a position to doubtful pieces.

In the absence of exact knowledge, similarity of types is doubtless a comparatively safe guide in dealing with an unplaced coin, but the general character of its work is certainly a safer one. Owing to the resemblance of the bust on the type 233 of Hawkins, to that on the pennies of Harold II., the author considered himself entitled to place that type at the head of his list, and both he and Lindsay agreed that the pennies of that type, at all events, belonged to the reign of William I. and not to that of William II. There can be little doubt as to the accuracy of this attribution, as there is a considerable resemblance between the workmanship of these and that of Harold's pennies.

In recognition of the similarity of the reverse of Harold'a pennies and that of the coin engraved above, it might, but for the rule I have suggested, be in the same manner proposed that the latter should be placed immediately before or after the type of Hks. 233. The obverse, however, is that of a penny which iu Lindsay's opinion belonged to William II., but according to Hawkins, to the latest period of the reign of William I. The latter suggests that the "intermediates" (of which this is one) "must, till some future discovery throw new light upon the suh-

ject, be left to the decision of individuel collectors." The present coin does throw some such light, as it is much more probable that the reverse of a coin of Herold II. would he used, however accidentally, on a penny of William I. than on one of William's successor. This would no doubt be the general opinion, in spite of the startling example to the contrary afforded hy the reappearance of a Pistrucci design, with the initials of the engraver attached, upon sovereigns of her present Majesty.

It is worthy of note that the type of Hks. 240, which was unknown before the Beawerth find, is a combination of this same obverse with the ordinary PAXS reverse; end the transition from that reverse to the disused type of Harold II. is both easy and natural. Whether, however, it was, as hefore inferred, accidental, or whother it was intended as n new design, can be a matter of conjecture only. The workmanship of the cohverse is certainly of a late date; the spelling of the king's name PILLELM points also to a similar conclusion, and assists in assigning the coin to what must be considered its natural position, viz., between the types 239 and 241 of Hawkins.

While on this subject, I am inclined to make some observations upon the occurrence of the word PAX in different forms on pennies of the Anglo-Saxon and Norman series. It is first found in the form of PACX npon a ponny of Cnut (Rud. XXIII. 25, Hks. 210) which is in the National Collection. This is said to he unique, and it has been supposed, eccording to Hawkins, to have been struck in commemoration of the peace established in 1016 between Cnut and Edmond Ironside, the eldest son and successor of Aethelred, who had then lately died. This is, however, a very doubtful origin, and I prefer the in-

terpretation which I have hereafter ventured to put upon the use of the word on coins of this and the subsequent reigns.

The word next occurs on an issue of pennies of Edward the Confessor (Rud. XXIV. 12), in the same form of PACX in the angles of the reverse, and almost identical in that respect with Cnut's coio. It occurs again on a penny of the same monarch in the form of PAX written across the field in the same way as on Harold's coius (Rud. XXIV. 11). A specimen of this last penny is in the British Museum; as the ohverse is the same as that of an ordinary type (Rud. XXV. 26, 27), it was possibly a pattern or trial pieco only. The same word PAX written across the field of the reverse forms the invariable type of the three known varieties of the penny of Harold II., but in the case of one of these varieties, it is written in a retrograde form. It then finds a place upon coins of William I. of the types 240, 241, and 242 of Hawkins, before referred to, and also on the penny I have ahove described, and it finally makes its, appearance written as PAX across the reverse of a very rare ponny of Henry I. (Rud. Sup. I. 7; Hks. 253), and nearly in tho same way as it occurs on Harold's coins.

I am not disposed to attach any historical importance at all to the occurrence of this word on the pennies of these different monarchs, but rather to suggest that it was used in an abstract sense only and as conveying a general sentiment, and, perhaps, salutation. It would be difficult to imagine that the types of the various reigns of which I have given a list, should have been issued to commemorate, Janus-like, the establishment of peace, and if we cannot suggest this as to all, it is unsafe to do so with respect to any one or more of them. It neight be suggested that

the doctrine involved is perhaps one of imitation only. PAX AUGUSTI and its contractions appear on the coins of several Roman emperors, and even on some of Carausius. There is every probability that on Roman coins an historical significance may, in most cases, he attached to the inscription, but it is equally probable that the design may have been borrowed from these by our own moneyers without reference to any such meaning. This is rendered the more likely as the mode of spelling PAX with a final S occurs on a quinarius of the Aemilia family, and also on a denarius of Galba.

On the whole, however, I am of opinion that the adoption of the word PAX in all its forms on coins of our own series is attributable to clerical influences.

In the same manner both the word LVX, which occurs on the scarce styca of Ecgfrith of Northumbria, and CRVX, which I presume could never have appeared on Roman coins, but which was used in connection with a very large issue of pennies in the reign of Ethelred II., betray a tendency towards religious inscriptions. The predominance of the Archbishop Lanfranc over the actions of William I. would also lend some weight to this argument, and I do not think it at all necessary to imagine, as some have done, that the issue of the PAXS penny was for the purpose of inducing a state of fancied security to the people at a time when it was intended to carry into execution measures of a vindictive character.

The form of ecclesiastical salutation PAX VOBISCUM, shows the importance attached to peace in the abstract; and the origin of this, apart from that of a divine nature attributed to it, is not difficult to trace, as in Oriental countries the same form of salutation has at all times prevailed, and among the ancient, as among the modern

Hebrewa, the prayer for peace forms an important part of the ordinary ritual.

Since writing the above notes I have bad an opportunity of consulting the new edition (published in 1881) of. Hildebrand's valuable Catalogue of Anglo-Saxon coins in the Stockholm Royal Cabinet, and can now supplement my observations by the following remarks. Hildebrand describes a Thetford penuy of Cnut (type F.), with PACX in the angles of the cross on the reverse, but which differs in many small details from the coin depicted in Hawkins (210), and also deprives the latter, which is in the British Museum, of the privilege of being alleged to be the unique exponent of this type. Hildebrand also describes a London penny of Harold I., with PACX similarly described (type E.), which is now to English numismatists. He also adds two pennies (types I. and I. var. a. respectively) of Harthacout, one being of York and the other of London, with the same word, similarly spelt, in the angles on the reverse, and there is no reason to doubt but that these represent an Anglo-Saxon and not a Danish type, inasmuch as the York coin not only hears the well-known name of ÆRNGRIM (otherwise ARN-GRIM) as mint-master, but also bas the usual annulet in one of the angles on the reverse. This mint and mintmaster appear to he thoroughly new to us so far as the reign of Harthacnut is concerned. I may add that the same author divides the usual PACX type of Edward the Confessor into three varieties (D., D. var. a. and D. var. b.) and represents a specimen of each. In the first variety . the cross on the reverse penctrates through the legend to the edge of the coin, and each of its limbs terminates in a erescent containing a pellet; in the second, the cross does not extend beyond the legend, and its limbs are not ornamented, and in the third there is an inner circle and each of the limbs of the cross terminates within this in a small annulet.

The very rare penny of Edward the Confessor with PAX across the field of the reverse appears as type L. of Hildebrand, and the York coin illustrating this type in his catalogue is exactly identical with that appearing in Ruding, Pl. XXIV. 11. In conclusion I may state that seeing that the new edition of this author contains descriptions of 10,458 Anglo-Saxon pennies as against 4,232 only described in the edition of 1846, no collector should be without it. Numerous new types and mints are now described for the first time, and the work is a miracle of patience and industry. In a very few cases there are attributions of mints which may not be accepted by all numismatists here, but the difficulty in dealing with these must not be underrated, and in several cases it is all but impossible to arrive at anything like a certain conclusion.

H. MONTAGU.

III.

THE ARABIAN HISTORIANS ON MOHAMMADAN NUMISMATICS.

For some time past my learned friend M. H. Sauvaire has busied himself with collecting together all the statements he can find in the Arabian historians bearing upon Mohammadan coins and metrology. The results of his search have been from time to time published in the Journal Asiatique, and a series of the papers so contributed have now been republished, under the title of Matériaux pour servir à l'histoire de la Numismatique et de la Métrologie musulmanes. (Imprimeric Nationalo.) This substantial volume of three hundred and sixty-seven pages deals entirely with the first part of the subject, with the numismatic records of the native historians. These records are earefully arranged under appropriate and systematically-ordered headings. First, the origin of the Mohammadan coinage is told in the words of a dozen historians who quote, more suo, at least twenty others, and establish their statements hy the usual scrupulous relations of tho names of the traditionists through whom the statements have been transmitted. M. Sauvaire gives minute references to the original texts, so that any one who is hardy enough to doubt the accuracy of his French translation can easily lay his doubts at rest, while the notes in which the translator appeads the dates of the writers and traditionists quoted in the text add greatly to the usefulness of the work. Indeed, no such work has ever before been attempted, and the subjects here boldly assailed by M. Sauvaire bristle with difficulties and confusion.

After the origin of the coinage has been treated from the bistorians' point of view, the Mithkul, the basis of the Muslim monetary system, is explained by the statements of the native annalists, and in a similar manner the Dinar and Dirhem, the Danik, Kirdt, Tassuj, Kharrubeh, Habbeh, and Aruzzeh, subdivisions of the dîaâr and dirhem; after which the Fels or copper coin obtains an interesting section. A long list of the names and qualifications of coins, to the number of one hundred and seventy-nine, replete with eurious and valuable information, next follows; and an important section on weight and standard, and a huadred pages of records of exchange, which will be prized as much by the medieval as the Oriental numismatist, bring the volume to a close. No more important contribution to the science of Oriental Numismatics has been made for many years. M. Sauvaire deserves the thanks of all wbo are interested in the subject for his industry and research; for the minute accuracy with which he bas reproduced the records of a large series of authorities, and the skill with which he has arranged the fruits of his labour. These fruits aro, it seems to me, so valuable, that I think I shall be rendering some service to numismatists if I summarize them as briefly and methodically as possible. The nature of M. Sauvaire's work, in which the translated words of the originals are properly retained, makes the perusal and comprehension of his various sections sometimes rather a difficult matter. The subject itself is so essentially obscure that the added complexity of the

Oriental method at times makes it almost impossible for the uninitiated to understand, and there is another obstacle in the absence of an index. I believe, therefore, that without in any way attempting to usurp the place of the original work, which every Oriental numismatist, indeed every Eastern scholar, is hound to possess, the following pages, in which the main results of M. Sauvaire's labours are hriefly set forth, with his help and under his supervision, may smooth the way of those who are unfamiliar with the methods of Oriental historians.

I shall retain the order of paragraphs of the original work, with the exception of that on the "Names and Qualifications of Coins," which I reserve for another occasion.

I .- THE ORIGIN OF THE COINAGE.

There is a general unanimity in Mohammadan historians in associating the foundation of a purely Muslim coinage with the name of the Khalif 'Abd-El-Melik ihn Marwan. We find this in the works of almost every Arabian El-Belâdhory († c. 260 A.H.) announces it on the authority of Daûd the Nakid (or sorter of coins), who had it on the word of his predecessor; and by the historian Mohammad ibn Sa'd (born 130), on that of Abuz-Zenâd, an early traditionist who died in A.H. 130, and may therefore have personally witnessed the introduction of the new money. All the later writers, such as El-Mawardy († 450), Ibn-el-Athîr († 630), Abu-l-Mahâsin († 874), Ed-Damîry († 808), Ibn-Khaldûn († 808), Es-Suyûty († 911), and others, who often had access to early authorities which are now lost, unite in crediting the reign of 'Abd-El-Melik with the inauguration of the Muslim coinage. Most agree in making the Khalif himself the author of the reform, but others ascribe the first experiments in coining to El-Hejjäj, his right-hand man. Nor are the authorities quite at one on the question of the date of the new issue; the accounts vary from A.H. 74 to 76. The following are the chief statements in support of these several views:-

I. FOR 'ABD-EL-MELIE'S INVENTION OF THE COINAGE.

A.H. 74, the "Year of Pacification," 'Abd-El-Molik struck gold coins. (Mohammad ibn Sa'd, A.H. 130-207, from Ibn Abî-z-Zenâd, whose father, a Tâby', died in 130. S. 11.1) Or "gold and silver," after that year (idem, from the same; but by a different channel, S. 14:) a variety of the same tradition, which neutralises the first.

Daûd, the sorter of coins, said that 'Abd-El-Melik struck some dînârs in 74, and some more in 75. (El-Belådhory. S. 12.)

A.H. 75. 'Abd-El-Melik engraved the name of God on dînârs and dirhems. (Es-Suyûty, Abu-l-Mahâsin, both late. S. 32.1

а.н. 76. 'Abd-El-Melik struck dînârs and dirhems (Ibn-el-Athir, S. 20, repeated by Abu-l-Mahasin, S. 33, in contradiction of his other statements, S. 32, and by M. 17, who add that the coins had an image on them). El-Kutuby only puts it A.H. 76, "in the reign of," &c. (S. 23), and Ibn-Khaldûn "by order of" (S. 24). Abu-l-Mahâsin adds that it was by the advice of the Khalif's brother. 'Abd-El-Azîz.

¹ S. 11 and similar references refer to the pages of M. Sauvaire's Materiaux. M. 17, etc. to De Sacy's translation of El-Makrizy's Traité.

II. FOR EL-HEJJAJ'S INVENTION OF THE COINAGE.

'Abd-El-Melik wrote to El-Hejjâj to strike dirhems. (Mohammad ibn Sa'd and others. S. 7-8.)

El-Hejjåj struck dirhems at the end of A.H. 75, then ordered them to be struck in all the districts in 76. (Mohammad Ibn Sa'd, from El-Medåiny, born 135. S. 11.)

He strnck the "disapproved dirhems," vide infra, and set up a mint after the Persian model. (Daûd the Nâkid, ap. El-Belâdhory. S. 12.)

Was the first to strike *white* dirhems. (El-Mawardy, S. 18. Cf. M. 25.)

Afterwards (after 'Abd-El-Melik's reform) El-Hejjâj struck dirhems. (Ibn-el-Athîr. S. 22.)

El-Hejjåj, by order of 'Abd-El-Melik, struck dirhems in 74 or 75; and in 76 the Khalif ordered them to be struck everywhere. (Ihn-Khaldûn, on the authority of the Tâby' Sa'îd ibn El-Musayyib, who died in 91, and of El-Medâiny, died 135. S. 24.)

Except in the question of date, these statements are not so conflicting as they at first appear. Whilst there can be little doubt that the general consensus of opinion which attributes an important share in the foundation of the Mohammadan coinage to the Khalif 'Abd-El-Melik is correct, there seems to be equally little doubt that it was his famous governor El-Hejjâj who made the first experiment in issuing silver coins. The true account would appear to be very much what Ibn-Khaldûn relates. El-Hejjâj, as Governor of El-'Irâk, probably struck the first trial dirhems, in his mint constructed after the Persian model, in the year 75, and the Khalif officially adopted the reform and ordered such dirhems to be universally issued in the year next following, himself at the same time inau-

gurating a corresponding gold currency. Thus 'Abd-El-Mclik accepted, promulgated, and applied to both metals the monetary reform introduced in silver by El-Hejjâj.2

There is, however, some evidence that the idea of a Mohammadan coinage had occurred to others before it was successfully carried into execution by El-Hojjāj and his master. Setting aside the letter of Picendi, Bishop of Kuft (Coptos), at the time of the conquest of Egypt by 'Amr ibn El-Asy (preserved in the Paris Bibliothèque), which states (S. 2) that the Arabs replaced the figure of Christ on the coinage with the names of their prophet and Khulif-a statement which lacks confirmation, though El-Makrîzy says that 'Abd-El-'Azîz ibn Marwân struck engraved dirhems as governor of Egypt in 77-there are many records of an attempt on the part of the rival Khalif 'Ahd-Allah ibn Ez-Zubeyr to issue dirhems on his own account. Mohammad ibn Sa'd (apud El-Belâdhory) reports from . . . En-No'man El-Ghafary, that Mus'ah ibn Ez-Zubeyr struck dirhems in A.H. 70 hy his hrother's order, on the model of the Persian pieces, but with the "From God" سي الله Benediction" and البركة (S. 11, 80); and the statement is repeated by Ibn-Khaldan (S. 24), and incredulously by Ibn-el-Athar (S. 23). El-Mawardy quotes a tradition to the effect that Ziyâd was the first to strike dirhems, 'Abd-El-Melik to strike dînârs, and 'Oheyd-Allah ibn Ziyâd to strike hase dirhems (S. 18). Daûd the Nâkid spoke of having seen a dirhem inscribed "'Oheyd-Allah ihu Ziyâd," and another "struck at El-Kûfah in the year 73." (S. 11. Cf. M. 34, who makes

² On the incident of Sumeyr the Jew's coinage, see S. 18. ³ According to M. 17, 'Abdallah inscribed on his coins the امر الله بالعدل والوفا محمد رسول الله words

the former A.H. 67 and at Basrah.) Both were considered by the experts to be forged. Mohammad Ibn Sa'd quotes Sufyân ihu 'Oyeyneh (born in 107), to prove that the first to issue dirhems at ten to the seveu mithkâls was El-Hârith, in the time of 'Abd-Allah ihn Ez-Zuheyr (S.10). All this points to some attempt at that time to produce a new coinage; and it is added that El-Hejjâj, who crushed the rebellion of Ibn-Ez-Zuheyr, abolished his coinage and substituted his own (S. 11). Nothing can be more probable than that the conqueror took his numismatic inspirations from the vanquished.

So much for the historians' account of the invention of the coinage. When we turn to the coins themselves we find no evidence whatever of El-Hejjâj's coinage, on which, according to several authorities, were inscribed the words "In the name of God, El-Hejjāj." 4 But too much stress must not he laid on this discrepancy. The same authoritics make out that El-Hejjåj's dirhems were "disapproved" on account of the inscription which they also bore, "Say, He is one God, God the Eternal," &c., which exposed a verse from the Koran to the dauger of heing insulted hy the touch of impure hands; and we are led to infer that the inscription was forthwith abolished. Yet this very formula, omitting the "Say," appears on all Amawy coins. Arabian historians seldom seem to have examined any specimens of the older coinage of their country, and all their statements about inscriptions must be treated with great distrust.5 The facts of the coins are plain enough. After 'Ahd-El-Melik's experiment with his own image

See Mordtmann, Nos. 851-6, and Tiesenhausen.

⁵ The three paragraphs quoted from Es-Suyûty, in S. 84—5, are full of mistakes in this respect. On the other hand, M.'s account, 20—1, is substantially correct.

on the dinars of A.H. 76 and 77, the regular Mobammadan coinage runs on unchanged, the gold beginning in 77, and the silver in 79. The only silver coins known before this are three pieces which once belonged to Snbbi Pasha's" collection, and are now in the Paris cabinet. These are precisely of the ordinary Amawy type, but bear the remarkable dates: El-Basrab, A.H. 40; Damascus, A.H. 63 and 65; and Marw. Competent judges pronounce these coins to be genuine, and if they are so, they will supply further instances of the attempts to forestall 'Abd-El-Melik's monetary reform which the bistorians ascribe to the supporters of the rival Khalif Ibn-Ez-Zubeyr.6 The last three of these would tally well enough in date with the time of Ibn-Ez-Zubeyr, but the mint Damascus, which was 'Abd-El-Melik's capital, is out of the question. Thus the numismatio evidence does not confirm the historical accounts of these early attempts, but substitutes others of its own; contradicts the statement that 'Abd-El-Melik reformed the coinage in 74-6, by showing dinars of 76 and 77 which are still not of the reformed type, and of which the historians make no mention. Either some very important coins have been melted down so that not a specimen has survived, or the bistorians' account of the origin of the coinage is incorrect.

As to what was in use before the introduction of the new coinage the authorities are perfectly in accord: there was nothing but Byzantine gold and Chosroes (i.e. Sassanian) silver, with perhaps a few pieces from the Himyarites of the Yemen (S. 84). The Sassanian dirhems were

⁶ Two coins of Mus'ab and 'Abd-Allah ibn Ez-Zuheyr which have been published by Mordtmann (839—58), of A.H. 71, and 62, are of the ordinary Pehlevy type, and the only Arabic inscription is بسم الله as usual.

of 8 dânik, or 4 dânik (heavy, or Baghly; light, or Tabavy), of various weights, 20, 12, end 10 kîrâts, and the Muslim dirhem was formed by taking en average of these three, thus making the new dirhem of 14 kîrâts, so that ten dirhems weighed 1 mithkâl. (S. 6, 7, 8, 18, 22, 25, 30, 40. M. pass.)

П.-Митикал.

The Mithkal is lexicographically any weight with which one weighs; but in common usage it means e certain fixed measure, a lump of gold, which has not varied in weight either before or after Islam (S. 35, 39). It is synonymous with the dinar, or rether mithkal is the weight of this piece celled dinar. The more ancient doctors of the law (up to the fifth century of the Hijreh) give 96 harleycorns (of medium size, not deprived of their husks, hut with the ewns cuts off) to the mithkal; and this computation was accepted by the people of Samerkend and the arithmeticiens (S. 35, ff.). The more recent lawyers (from the fifth century) give 100 harlsycorns to the mithkål, and this system was adopted in the Hijaz, end at Herat' (S. 35, ff.). The sub-divisions differ in these two systems, end in the third (recorded by the author of the Kitâb El-Hâwy, fifth or sixth century, S. 48), as follows:-

A. ANCIENT SYSTEM.

	Mithkal		1				
	Dánik		6	1			
8	Tassûj		24	4	1		
	Habbeh		48	8	2	1	
	Barleycor	'n	96	16	4	2	1

¹ The legal mithkâl is stated in Ibn-Khaldûn to he of 72 grs. barley (S. 51 and 55), or 22 (Syrian) kîrâts less 1 habbeh at Mekka (S. 55; M. 9).

^a According to some (S. 72) 3 habbebs made 1 tassûj. In

B. LATER SYSTEM.

Mithkal		1		
Kîrât		20	1	
Barleycor	Di:	100	5	1

C. THIRD SYSTEM.

Mithkal	1			
Dânik	6	1		
Habbeh	60	10	1	
Aruzzeh	240	40	4	1

Ten legal dirhems = 7 mithkâls; 1 dirhem = $\frac{7}{10}$ mithkâl, in weight. In exchange 10 d. = 1 m. In practice tho dirhem varied greatly, and the dîuâr hy no means always weighed a mithkâl: e.g. in 516, 20 Egyptian dînârs = 16 mithkâls (S. 47).

Minute divisions were 1 barleycorn = 10 graine of mustard seed; 1 gr. m. s. = 12 fels; 1 f. = 6 fatilehs; 1 fat. = 6 nakîrehs; 1 n. = 8 kitmîrs; 1 k. = 12 dorahs (S. 38).

III.-Dînâr and Dirhem.

Dînârs and dirhems vary in weight and value in different countries and provinces; but as the law has ordained certain payments, such as the universal alms, it is essential to have a fixed value, or rather, since the alms (Zekâh) are levied by weight, a fixed weight, for the dînâr and dirhem. These legal or conventional coins have the relation of 7 to 10 in weight (S. 50); and a dirhem there-

this case the habben must be the barleycorn of Mekka mentioned in the preceding note, and 2×24 tassuj would give the 72 grains of the legal mithkal.

fore weighs 70ths of a dînâr; and a dînâr 13ths of a dirhem. The legal dîuâr (or mithkâl of gold), according to the opinions of all the learned,9 weighed (and weighs) 72 medium barleycorns, and the dirhem $(\frac{7}{10} \text{ of } 72 =) 50\%$ b.c. (S. 51 ff.). At first there were no actual coins to correspond to these weights; but 'Abd-El-Melik's new coinage exactly fulfilled the requirements (S. 53). (The coinage of A.H. 77 ff., may therefore be taken to represent the legal dînâr and dirhem.) A Mufty of Medîna examined a series of dirhems of 'Abd-El-Melik, A.H. 79 and 83, Er-Rashid 173, 181, and El-Mamûn; and reported that they all weighed 14 dirhem of Medina (which was of 16 kîrâts, each of 4 habbehs of corn, i.e. 64 habbehs; and $1\frac{1}{4} \times 64$ = 80 hubbehs or grs. 10 (S. 60.) Although the actual coinage is constantly falling away from the legal standard, the convontional dinar and dirhem of account are retained in all legal computations. Legal dînâr = 20 kîrâts of 5 grs. = 100 grs.; dirhem = 14 kîrâts of 5 grs. = 70 grs. (S. 58, &c.). But the legal dirhem of the Zekâh is of 6

^{*} Except Ibn-Hazm, who says 82 % h.c. (S. 54; M. 66). Cp. the tables under head Mithkal and the footnote. The barloy-corn and habbeh seem to have heen variable quantities, merely divisions, not fixed weights.

¹⁰ As the dirhoms referred to must have actually weighed 45 English grains (to judge from the British Museum specimens) we have the definite result—80 habbehs = 45 Eng. grains, or 1 grain = 1_{1}^{2} habbeh. At the same time the Medina habbehs may have been peculiar; and 80 is an unusual number to assign to a dirhem. If the ordinary estimate of 70 habbehs to the dirhem be taken, 1 gr. Eug. = 1_{1}^{4} habbeh; and the dinar of 100 habbeha would thus = $100 \times \frac{10}{16} = 64_{1}^{2}$ gr., which is very much the normal dinar weight. If the other estimate of 50₂ habbehs to the dirhem (which seems to me manifestly made up) be accepted, 1 gr. = 1_{1}^{4} habbeh, and the dinar of 72 habbehs = $72 \times \frac{2}{3}$ = 64_{1}^{2} gr., as above.

daniks, each of 84 b.c. = 504 b.c., or 72 to the dinar (S. 61). (The explanation is, the discrepancy in the preceding statements is doubtless the difference between those who hold that the legal dinar consists of 72 habbehs, and those who maintain that it was of 100 habbehs. proportion between the two denominations is identical in both: $100:70::72:50\frac{2}{5}$.) Ten legal dirhems are worth one legal dînâr, as is proved by the law of Zekâh11 (S. 49, 64, &c.). (Relations of gold to silver, however, as 1 to 7, S. 55, note.)

- Dinar.—The name of a round gold coin; also ealled in jurisprudence a mithkal. Its divisions are those of the mithkal (see above). The legal dinar is a money of occount, and is described above. The actual dinar of currency is of variable weight; in Syria, e.g. it weighed 84 barleycorns; in Egypt, under the Fatimis, one barloycorn less than the mithkal (S. 77).
- Dirhem.—The name of a round silver coin; the round shape was first adopted by the Khalif 'Omar; formerly it had the shape of a date-stone and had no inscription (S. 89). The legal dirhem is a money of account (see above); the actual dirhem of currency varied greetly in weight, e.g. in 710 the Egyptian dirbem weighed 64 habbehs, at other times 48 (S. 88, 97). The divisions of the dirhem are into 6 daniks, or 14 kirats, or 70 barleyooms.
- Danik.—The sixth of the dinar and of the dirhem: [therefore of variable weight in reference to one or the other, and in respect of the varying weights of either. As à of a dinar, it is equal to 12, or to 10, or to 8 habbehs (or 82, M. 67), according to the number of habhens to the dinar (see under Mithkal). Hence we find the following rolations recorded: = 2 kirats (of silver, i.e. 21, as there are 14 kirots or 6 daniks to the dirhem); or =31 kirâts (i.e. in relation to the dinar of 20 kirâts) or =10

¹¹ Yet Esh-Shab'y end Ibn-Hanhal say 12 dirhems went to the dinar in the Prophet's time (S. 78-4); doubtless they refer to other than legal dirhems (S. 74).

habbebs or 40 arnzzehs, i.e. in roference to the dinâr of 60 babbebs (S. 98); or = 12 grains, i.e. in reference to the dinâr of 72 habbehs (S. 102). Five dâniks of gold = $11\frac{1}{16}$ ths dirhems at Baghdâd, where the dinâr was worth $14\frac{1}{16}$ (S. 99). The dânik was tho quarter of a dirhem in Khwarizm, afterward $\frac{1}{16}$ (S. 99, 155).

Kirát—The ½th of the legal dînâr and the ½th of the legal dirhem, but in practice its relation varies greatly, =½, ½, ½ dînâr, and ⅙, ½, ½, ¼, and even, under the Fatimis, ½ dirhem (S. 79, 95, 102); hut this was a gold coin kirât which is properly equal to ½ dirhem. In 599, under El-'Adil, 11 emîry kîrâts = 1 dînâr (S. 286). The kîrât is equal to 5 habhehs (S. 102), or 3½ (S. 77), &c.; 15 kîrâts to the Buweyhy dirhem, and 20 to the Imâmy (S. 279).

Tassúj.—The 1 of a danik and 1.1 th of a dinar or of a dirhem.

Equal to 2 habbehs in relation to the dirhem; or 3 habbehs in relation to the dinar. It varies with the danik.

Kharrúbeh.—Tho grain of the kharrnh tree = 1/2 th mithkál, or 1/2 th dirhem (or 1/2 th) = 8 grains of corn. [Scil. as the dinár is to the dirhem, i.e. 10:7::24: 16½] (S. 96, 97, 103). As a coin, a sub-division of the bezant of Cyprus (S. 106); and a small gold coin struck on Lentil (Holy) Thursday = 1/2 th dinár (S. 78).

Habbeh.—A grain, i.e. a barleycorn = 4 aruzzohs, = ½ kîrât, = ½ danik (S. 107), or = 2 barleycorns, = ½ tassûj, or = Å dinar.

Aruzzeh or Tamunah is a quarter of a habbeh or 20 dánik (S. 100, 108), or 20 dánik (S. 145).

IV.-FELS.

Fels is a copper coin used for buying cheap goods; but it has never been held to be money in the sense of the dînâr or dirhem. It is only a price by convention.

At first 48 fulûs went to the dirhem kâmily (i.e. of El-Kâmil, the Ayyûby), and the fels was split into four fragments (kitâ), each of which represented a fels. In 750

(654?) they struck fels at weight of mithkâl, and 24 to the dirhem; thus cheating the people of half. But in 695 it was ordered that fulûs should he weighed and should have the weight of a dirhem. A pound (ratl) of them was to be worth 2 dirhems. The Wezîr of Barkûk (784 ff.) brought red copper from France and struck many fulûs, establishing (794) a mint at Alexandria also for the purpose, striking no more dirhems (S. 108—112).

El-Kâmil had the fulûs of his predccessors cut.

- 658. Lack of fulus at Damascus.
- 694. Cairo. Increase of number of fulus; an ounce of them equalled a sixth of a dirhem in value.
- 705. New fulus at Cairo, at 21 dirhems per ratl.
- 717. Fels = 1. dirhem. So 734.
- 759. Sultan Hasan struck new fulus, each weighing a mithkal.
- 794. Vide supra. Large number of had fulûs struck. See Annals of Cainage and Exchange.

V .- WEIGHT AND STANDARD (TITRE).

Before stamping the pieces with their inscriptions, it is necessary to make sure of the titre hy refining them several times in the melting pot, and to give the flans the exact weight required. The office that attends to these matters is called sikkeh, 12 and is absolutely essential to the empire. It inspects the current coin, distinguishes good from had, prevents sweating and chipping, and guarantees good coin hy the Sultan's type, which is impressed on the pieces hy means of an iron die which is superimposed upon the flan (after the weight has been adjusted) and struck with a hammer. This mark or type

¹² The sikkeh is properly the anvil ou which the coiu is struck (S. 86).

('aldmeh) guarantees the fineness and correct weight of the coin, according to the usage of the country in which it is issued; for *titre* is arhitrary and varies in different countries. (Ibn-Khaldûn, S. 256—8.)

Ahmad-ibn-Tûlûn's dînârs were particularly pure (S. 123).

516. Cairo. Dinars of El-Amir were of higher titre than those of other towns (S. 261).

Năsiris or dirhems of En-Năsir Salâh-od-din were alloyed in equal parts silver and copper (S. 261).

Kamilis or dirhems of El-Kamil Mohammad (615—35) were alloyed in \(\frac{1}{3} \) copper and \(\frac{2}{3} \) silver (S. 261—96).

Dháhiris or dirhems of Edh-Dháhir Beybars (658 —76) were alloyed in 30 parts copper to 70 of silver.

About 749 A.H., Egyptian dirhems were alloyed in a copper and a silver (S. 262).

(Circ. 570.) As to the coining of silver money, one takes 300 dirhems (weight) of silver and molts it with 700 dirhems (weight) of copper. When it is all melted together, it is cast in bars, from the end of which 15 dirhems are then cut and melted. If the assay now give 4½ dirhems of pure silver, so as to give 3 for every 10 dirhems, the metal is satisfactory; otherwise one remelts the bars (S. 262).

The legal dirhem (of account) is supposed to be of pure unalloyed silver (S. 84).

No alloy in the dirhems of Ma-wara-n-nahr and Khwarizm (S. 96).

728 A.H. at Dhafar, in Yemen, the dirhems are alloyed in copper and tin (S. 97).

The titre of the dînâr was very good and constant, as is seen from the following table (S. 266-8):—

Weight of legal dirhem = 3.0898 grammes (= $47\frac{1}{2}$ grs. Eng.)

A.H. 327. 45,000 dinárs = 400 lbs. virgin gold in Spain (S. 274).

5 to 7 , = Maghrahy lh. of coral (S. 287).

Under Fâtimis, 250 dirhems = 12 mithkâls of gold (S. 278.)

678—89. In Egypt, 20,000 dirhoms = 1,000 mithkils of gold (8. 288). So 095 (S. 289).

718. In Egypt, 100,000 dirhems = 5,000 mithkals of gold (S. 802).

714-16, 717, 718, &c., 732, 741-2, 757, 828, in Egypt, the same proportion, 20 to 1 (S. 302-317).

But 797, in Egypt, 200,000 dirhems = 4,000 mithkals of gold (i.e. 50 to 1), (S. 305).

742, temporary change in Egypt, 11 dirhems to the mithkal (S. 308).

770, 790, in Egypt, 30 dirhems to the mithkal of gold (S. 307, 310).

740.circ., in Asia Minor (S. 800-7):-

In Kermiyan, Tawaza, and Fukoh, dirhem = 1 dirhem of puro silver.

In Kastamûni, Kawiya, and Tingislu, Akserái, Marmora, Antalia, Kara Hissar, dirhem = ½ dirhom of pure silver. In Brusa, dirhem = 1 Kamily dirhem of pure silver.

695, in Egypt, 1 ratl of fels = 2 dirhems (S. 289), or 21 dirhems in 705 (S. 301).

806 c., 100,000 dirhems of fels = 600 mithkals of gold (instead of as formerly 1,000) (S. 311).

i.e. 150 [scil. 151] dirhems of fels = 1 mithkål of gold

Or even 300 dirhems of fels = 1 mithkål of gold (S. 311).

5 dirhems of fols = 1 dirhem of silver (S. 312). 1 rath of fels = 6 dirhems of silver (S. 314).

806. Weight of fels fell from one mithkal to # dirhem (S. 314). 825. Sherify dinar of Barsabay (pure gold) = wt. of legal dirhem + 1th (S. 173).

Twolfth century, 460 ruba'is of William of Sicily = 35 libra of

210 ruba'is of William of Sicily = 154 libra of gold.

260 ruhá is of William of Sicily = 111 lihra of gold at weight of Justidy or of the city.

415 ruba'is of William of Sicily = 12 libra less 5 soldi, at weight of Justindy or of the city. 240 ruha'is of William of Sicily = 14 lihra in weight of the city (Palermo) (S. 231-4).

Thirteenth century, ounce of gold of Sicily weighed 26 grs. 85 (of which 18.50 were gold) was divided into 30 tarins, and was worth 54 fr. 86 cents., 45 fr. 72 cents., or 48 fr. 89 cents., according to exchange (S. 290).

Bezant of Acre varied in weight from 3 grs. 70 in 1251 a.D., to 3 grs. 05; 18 carats fine (S. 293).

Bozant of Marocco weighed 2 grs. 30 about 1228 A.D.; 20 carats fine (S. 294).

The following table of the weights of Mohammadan dîuârs and dirhems is compiled from my Catalogue of Oriental Coins in the British Museum. The number of coins included in the estimate, their collective weight, average weight, highest weight, and lowest weight is given. Only those series are given which offer a sufficiently large induction to prevent the possibility of arguing from an exception. Specimens that have been pierced with large holes or clipped, or have a ring, or are otherwise exceptional, are omitted.

" The dinârs of xxxiv. En-Nâsir (A.H. 575—622) range themselves under four heads: \(\frac{1}{2}\) dinârs, average of 4, 34.0; dinârs, average of 8, 03-1; double dinârs. 112.6, and triple dinârs, 158 grs. So xxxvi. El-Mustansir (A.H. 623—640), 35.8, 86.7, 165.4 and 124.7; and xxxvii. El-Mustalsim (646—650) 88.2, 111.7 (average of 4), and 177.1 (average of 8). The dirhems of En-Näsir are not represented in the British Museum; but those of El-Mustansir (3) average 44.62, and of El-Mustalsim (2) 46.5. El-Molvenid, El-Muktefy, El-Mustefy and Bary dirhens of weight 78 0, 78.1, 67.0, 67.1, and 83.0. There are also a few light gold pieces in the 'Abbâsy series: and thulths of 21.4 grs. and a nast of 31.8 in the Amawy.

VII .- Annals of the Coinage.

'Omar, in A.H. 18, struck coins after the Sassanian model, adding ما الله الا الله الا الله و أستحمد رسول الله or الحمد (M. 13). 'Othmân put الله اكبر on his dirbems (M. 14). Mo'âwiyeh struck dînârs with his own figure, girt with a sword (M. 15).

The first to establish a mint (dår-ed-darb) under Islâm was El-Hejjâj; here he assembled the coiners and set a seal on their hands. The chief improvers of the Amawy coinage were 'Omar-ibn-Hoheyreh (temp. Yezîd II.), Khâlid-ihn-'Ahdallah¹⁷ (temp. Hishâm), and Yûsuf-ihn-'Omar; and their issues were known as Hobeyris, Khâlidis, Yûsufis (13, 22). Es-Seffâh added "'Abbâsy money" to the inscription.

In 158, El-Mahdy Mohammad struck a round coinage with a point in it (M. 29). El-Mansûr was the first to put his name on the coinage. Reduced weight of dirhem 3 habbehs (M. 29). Harûn Er-Rashîd wus the first Khalif to give up the personal superintendence of the coinage, and his delegation of this duty to Ja'far added greatly to the latter's prestige. Ja'far accordingly put his name on dînârs and dirhems struck at Medinet-es-Selâm (Bsghdåd) and El-Mohammadîyeh (inscribed "hy the order of him who has the inspection of dînârs and dirhems," M. 30). He also struck dînârs of 100 mithkâls for distribution at the feasts of Nerûz and Mehrjân, with a couplet inscribed on them. After the death of Ja'far, Harûn appointed Es-Sindy to direct the coinage, who

¹² Khâlid struck from 106—120, and Wâsit was the only mint; so, too, under Yûsuf, 120—26 (M. 28). To this the coins add Damascus.

strnek dirhoms equal to dinârs (M. 32). El-Amîn entrusted the mint to El-'Ahhas ihn El-Fadl ibn Er-Rehi'a, who engraved in the top-line ربي الله and in the hottom الغباس بير الفضل (M. 32). El-Amin also issued coins (dînârs and dirhems, weight of 6 dâniks each) in the name of his heir-designate, En-Nâtik bi-l-hakk, El-Mudhaffar li-llah, with the inscription, "All honour and glory to Mûsû El-Mudhaffar the king, whose name is specially preserved in the book of the oternal decrees" (M. 33). A.H. 194, El-Mamûn suppressed the name of El-Amin on the coinago, and in 195 took the title of "Amirel-Mumenin." 195, El-Ainin suppressed El-Mamûn's coins struck iu Khornsûn in 194, heeause El-Amîn's own namo was not on them; when El-Amîn was dead, El-Mamûn could find no artist to engravo the dies for the dirhems, so they had to be done on the wheel, like seals (M. 33).

The 'Abbasis had coins called denantr-el-khariteh, double (or perhaps 100 times) the value of the ordinary dînâr, and bearing the inscription "Issue of Hasany for the escarcelle of the Prince of the Faithful." They were used for presents for singers, and the like; Hasany is the name of a huilding in Baghdad.

240. El-Mutawekkil adds the name of El-Mo'tezz to the coin inscriptions.

255-6. El-Muhtedy melted down cups of royal treasure into dinars and dirhems.

267. Ahmad Ibn 'Abd-Allah El-Khojestany struck dinars and dirhems in his own name in Khorasan.

294. Ziyadet-Allah the Aghlaby engraved the name of a favourite page Khetah on dinars and duhems.

296. Ahu-'Abd-Allah, the Shi'y, struck coins at Kairawan with the words "Hujjet Allah" on one side, and "Teffarrak 'ada-llah" on the other.

^{206-238. &#}x27;Abd-Er-Rahmin II. was the first to strike coins at Cordova.

300. Title of *Imam* first appears on eilver coins of 'Ahd-Er-Rahman en-Naeir, who also eetablished in 316 a mint in the interior of Cordova, and eet Ahmad ihn Müsä ihn Judeyr over it, whence pure and exact money was issued in 320; however, he was superseded by Yahya ibn Yunns El-Kaharty (?).

322-9. Er-Rådy the Khalif held one day in his hand a dînâr and a dirhem each weighing about 10 mithkâle, and each hearing on one side the figure of Bejkem armed cap-à-pie,

and surrounded by the inscription :-

The reverse hore the effigy of the Khalif, ceated, with head

sunk ae in thought.

334. Naeir ed-dawleh ibn Hamdan forhade the issue of coine with the name of El-Muti', and etruck gold and silver with date 331 and name of El-Mutiaky.

996. 'Ahd-Er-Rahman III. transferred the coining from ('Abd-Allah ibn Mohammad'e) mint at Cordova to Ez-Zahra.

The only mint of Farie is at Shirûz, and those of Mawaran-nahr at Samarkand and Tükant (Istakhry) [and Bukhara

and Ylak ..

347. Jowhar took prisoner Mohammad ihn El-Feth ihn Wasul, who formed Sijilmäseh under the title of Amîr et Mumenîn, and had put his name ou the coine, together with "Tekaddeset izzet allah."

354. N\(\alpha\)fi, the black, a vassal of the late Yusuf ibn Wej\(\beta\)h, recognised the suzorainty of Moizz ed dawlch ibn Buweyh

on coine and in prayere in Oman.

Weled As'ad ihn Ahi-Ya'fur, lord of San'a, strikes dirheme in the name of Ahn l Jeysh Ishâk ihn Ihrahîm ibn Zyad, the chief prince of Arahia.

866-92. El-Mansûr Mohammad ihn Ahi-Amir, hûjih of Cor-

dova, puts his name on the coins.

976. Ahu-l-Fehm Hasan ibn Naeruweyh, a Fatimy miseionary, began to striko coins and levy troope among the Kotâma, hut was defeated and killed in 378 hy El-Mansur ihn Bologgin.

278. A dinar [medal] of 1,000 mithkals was presented to Fakhred-dawleh, bearing eight verses, Sûra CI, and the names and titles of Et-Ta'y, of Fakhr-ed-dawleh, and the mintplace Jurjan.

400. Cakes of bread used as money at Baghdad.

Under the Fatimis, the chief Kady had control of the mint. Inscription circular. There is a small ruh' or quarter; also a kîrât or half (S. 78, 79, 95). Little

kbarrûhehs, 20 to dînar, were etruck on Lentil Thursday.

408. Coins etruck in name of El-Håkim at Mekka.

412. Nejáh, sole king of Yemen, coined in his own name: died 452.

440. Coins struck with name of 'Abbasy El-Kaim, instead of Fatimy Khalif, hy El-Mo'zz ihn Badie; who in 441 put thie inscription on one side of the dinars, "Whose desireth another religion than El-Islam," &c. (Kor. iii. 79), and on the other the ordinary all like zane , well I'll I'l A [fancy] coin [or medal] with verses issued by El-Mustansir and his Wezîr Yozûry.

462. Khalif of Egypt puts his son'e name on dinars, which were called 'amiris, and forhad uso of other dinars.

479. Yûsuf ihn Tashifin issued dinars with inscriptione all يوسف بن تاشفين ,below ; لا الله الا الله محمد رسول around Kor. iii. 79; on the other side امير المسلمين, around which the date and mint.

The Ziry princes only issued coins towards the end of their domination; Mansur, lord of Bejäyeh, first adopted a

monetary type.

548. Yahyo, son of El-'Aziz the Hammady, changed the type of the coinage, and arranged the inecription on each side in three lines in o circle; the circle on one side read: "Foar the day when ye shall he assembled before God; then shall each sonl receive the reward of its worke, and they shall be done no injustice" (Kor. ii. 281); and the three lines were, "There is no God hut God; Mohammad is the Apostle of God; Yahya ibn El-'Aziz bi-llah, the victorions amir, holds fast the rope of God " (cf. Kor. iii. 98). In the reverse circle we read

بسم الله الرحمن الرحيم صنرب هذا الدينار بالناصرية نُسنةً ثلاث واربعين وخمسماته

ond in the three lines, "Tho Imam is Ahu-Abd Allah El-Muktefy li-amri-llah, Amîr El-Mu-menin, El-'Abhasy."

567. Salah-ed-din struck coins in name of El-Mustady and Nûr-ed-dîn.

There are two mints in Egypt: at Cairo and Alexandria.

581. Tughtekin ibu Ayyûb strnck dinârs and dirheme at Mekka with name of Salah-ed-din.

583. Salah-ed-din called in the old coin and struck new diners and nasiry dirhems (half eilver, half copper).

A .17.

626. El-Mamún, the Mnwahhid, ordered suppression of the Mahdy's name in prayers and in coinage, and had it effaced on the latter; mado coine round instead of square. Er-Rashid restored the former system.

648. Shejer-ed-durr's name, &c., engraved on coins

المستعصمةالصالحية ملكة المسلمين والدة المنصورخليل امير

المومنين

678. Coins struck in Egypt in Jumada, with Kahaun on one eide and Selamish on the other.

703 or 706. Ahn-Ziyan of Telimean ('Ahd-El-Wady dynasty) heing relieved from eiege hy death of Yusuf ihn Ya'kuh, pnt ما اقرب فرج الله gratofully on his coins.

In Rûm, after Tartar conquest, the coins were issued in

the name of the prince of the family of Hnlagu.

740-749. Artina etruck coins in the name of En-Nasir Mo-

Zeyn-eddin, the Mawaziny (or maker of halancoe), was mudawlib of the mint, i.e. kept in order the halance and other machines used at the mint.

797. Barkûk appointed 'Ala-ed-dîn 'Aly et-Tablâwy master of the two mints.

809. Coins etruck in Syria in name of the Pretender, the Amir Håkim.

929 circ. Ahmad Pasha revolts and etrikes coins in his own name at Cairo.

971-3. Base coin fraudulently used for rovenue payments.

S. LANE-POOLE.

FRESHWATER, 1883.

THE MEDAL OF THE NUMISMATIC SOCIETY.

On Plate IV. we give an autotype reproduction of the Medal of the Numismatic Society, the dies for which were recently presented to the Society by the President. For a full description of the Medal the reader is referred to p. 19 of the Proceedings for 1883.

The first recipient of the Mcdal was Charles Roach Smith, Esq., F.S.A., for his distinguished services to Numismatic Science in connection with the Romano-British Series.

Num. Chron Ser. III. Vol. IV.PU.IV.

IV.

LE SATRAPE MAZAÏOS.

La longue inscription araméenne des statères de Tarse, publiés par le Duc do Luynes, Numismatique des Satrapies, Pl. III. 1 et IV. 2—4, dans laquelle on a cru trouver lo nom d'Absohar, a résisté pendant bien longtemps à toutes les tentativos de déchiffrement des orientalistes les plus célèbres, i jusqu'à ce qu'enfin M. J. Halévy est parvenu à en reconnaître la véritable signification.

D'après la transcription proposée par M. Halévy, il n'est plus question d'Absohar—personnage tout à fait inconnu du reste et qui ne doit son existence passagère qu'à co qu'un nun, mal formé sur un des statères (Pl. VI. n. 1), a été pris pour un zaïn—mais de Mazaïos, satrape d'Abarnahra (Transeuphratique) et de Cilicie, mentionné plus d'unc fois par les historiens à propos des évènements qui eurent lieu dans la seconde moitié du quatrième siècle. Cette solution d'un problème, qui a occupé tant de savants distingués, est si simple et si conforme aux exigences de la numismatique, qu'elle n'aurait pas manqué d'êtro adoptéc tout de suite, si elle n'avait été publiée dans un ouvrage qui n'est pas déstiné spécialement aux numismatistes² et

¹ Revue Numismatique, 1860. F. Lenormant, p. 11-30. W. H. Waddington, p. 443-452.

² Mélanges d'épigraphie sémitique, 1874, p. 64-71.

qui, par ce fait même, doit leur être resté pour la plupart inconnu, et si, en outre, les autres monnaies sur lesquelles se lit le mot מדרי, Mazdaï, que M. Halévy traduit par Mazaïos, ne semblaient s'opposer à l'explication proposée.

C'est là, du moins, la raison pour quoi je me suis abstenu jusqu'ici de classer à ce soul et même satrapo toutes les monnaies diverses qui portent le mot cité et pourquoi j'ai persisté, aiasi que M. Blau et M. Imhoof-Blumer, mêmo après avoir lu le livre de M. Halévy, à voir daas מורי ou מורי ce qui est également admissible—la désignation d'un titre ou d'une charge.

Aussi a-t-il fallu l'autorité d'un orientalisto des plus compétents, M. Th. Noeldeke, pour m'induire à examiner si c'est bien un fait avéré que l'interprétation proposéo soit en contradiction directe avec ce que nous apprenneut les monnaies, et à rechercher s'il n'y aurait pas moyen de concilier les opinions contradictoires des numismatistes et des sémitistes sur ce sujet.

A cet effet je mo suis ruis à étudier et à comparer entr'elles toutes les émissions faites en Cilicie et surtout à Tarse, pendant le quatrième siècle, à former des groupes, à rechercher comment les types se suivent et so modificat, afin de m'assurer si toutes les monnaies, qu'il faudrait assigner à Mazaïos, peuvent êtro compassées entre les séries de Tiribazo, de Pharnabaze et de Datame⁵ d'un

Blan, Numism. Zeitschr. xi. 1879, p. 15. Imhoof-Blumer, Monnaies Grecques. Amsterd., 1883, p. 369.

⁴ Noeldeke, Goettingische gelehrte Anzeigen, 1884, n. 8, p. 292, 2.

⁴ Je démontrerai tantôt que le nom de Dafame doit être remplacé par un autre.

côté et celles d'Aloxaudre le Grand de l'autre, co qui a paru impossible au Duc de Luynes.⁶

Car les données des historiens, quolqu'incomplètes qu'elles soient, sont suffisantes pour nous renseigner sur l'époque où la Cilicio et plus tard la Syrio furent placées sous lo gouvernement de Mazaïos.

En 351, il est en tête do la Cilicio et c'est lui qui avec le satrape de Syric, Bélésys, s'oppose aux villes de Phénicie révoltées, en attendant l'arrivée du roi de Perse, Ochus, en personne.

Mais les forces dont ils disposent sont insuffisantes. Le roi de Sidon, Tennès, bat les satrapes et leur fait évacuer la Phénicie.⁷

Notons en passant qu'à cette époque, comme au temps de Darius, la cinquième satrapie comprenait tout le pays depnis Posidion jusqu'à l'Egypte: Célésyrie, Phénicie, l'alestine, le nord de l'Arabie et l'île de Cypre. Le nord de la Syrie, par contre, faisait partie de la quatrième satrapie Cilicie, et c'est là que résidait, en 401, Bélésys

⁶ Satrapies, p. 28.

Tolodore, xvi. 42. Βίλεσυς ὁ τῆς Συρίας σατράπης καὶ Μαζαΐος ὁ τῆς Κιλικίας ἄρχων συνελθόντες ἐπολέμουν τοὺς Φοίνικας. Τέννης — τοῖς προερημένοις σατράπαις συμβαλὼν ἐνικήσε, etc. Μ. Neeldeke, à l'obligeance duquel je dois plus d'une dennée importante, a bien vouln me faire remarquer que ces événements. racontès par Diodore sous l'année 351, semblent avoir eu lien plus tard, un on deux ans avant la conquête de l'Egypte, dont Ochus paraîts ĉtre rendu maître en 344. Ce qui m'empêche d'accepter ces dates sont les monnaies, dont il sora traité plus loin, p. 146—150, et qui prenveut, à mon avis, que déjà en 349 la Phénicie était sous les ordres de Mazaïos et que par cousèquent la révolte ne pent guère avoir commencé après 351. Voyez l'article de M. Noeldeke dans les Goettingische gelehrte Anzeigen, 1884, n. 4, p. 290—300.

⁶ Hérodote, iii. 91. Xénophen, Anabase, vii. 8, 25.

nemmé satrape de Syrie et d'Assyrie dans Xenophon® et ancêtro peut-être du Bélésys de 351.

En 333, c'est Arsamès qui est satrape de Cilicie. Après avoir pris part à la bataille du Granique, 10 il s'enfuit quand Alexandre s'appreche de Tarse, se rend près du roi de Perse, Darius et perd la vie à la bataille d'Issos. 11 Mazaïos, de sen côté, est dovenu satrapo de la Syrie des deux côtés de l'Euphrate, comms successeur de Bélésys, à ce qu'il paraît.

C'est done lui qui vient se joindre, en 331, à la tête du contingent de la Célésyrie et des Syriens de la Mésopotamie, à la grande armée qui se réunit près de Babylone. 12 Il est chargé d'observer le passage de l'Euphrato par Alexandre, se retire à l'approchs des Grecs, se distingno à la bataille d'Arbèles 13 et lersqu'Alexandre arrivo à Babylone, lui ouvre los portes de la ville. Il est recompensé par lo gouvernement de la Babylonie, chargo qu'il remplit jusqu'à sa mort en 328.14

^{*} Χέπορhon, Anabass, i. 4, 10: 'Ενταθθα ήσαν τὰ Βελέσνος βασίλεια τοῦ Συρίας ἄρξαντος, etc; vii. 8, 25: 'Αρχοντες δὲ οἴδε τῆς βασιλέως χώρας—Κιλικίας Συίννεσις, Φοινίκης καὶ 'Αραβίας ('Ι)δέρνης, Συρίας καὶ 'Ασσυρίας Βέλεσυς. La cinquième satrapio est désignéo par Phúnicis st Arabio et l'Assyris èquivaut au nord de la Mésopotamie, v. Schrader, Zeitschr. f. Keilschriftforsch, i. p. 18,

Diodore, xvii. 19, où il est nommé Arsamenés. Droysen, desch, d. Hellen. I. i. p. 191.

¹¹ Droysen, l. c., p. 247, 252, 262.

¹² Antien, Anabass iii., 8. 6. Σύρους δέ τούς τε λε τῆς Κοίλης καὶ ὅσοι τῆς μεταξύ τῶν ποταμῶν Συρίας Μαζαῖος ῆγεν. Droysen, p, 312.

¹² Droysen, p. 313; 327; 330, 332, 340.

¹¹ Droysen, p. 344, 348; i. 2, p. 77. Quand Mazaïos devint satraps de la Babylonie, Mênes fut nomaié hyparque de Syrio, de Phénicie et do Cilicie. Arrien. iii. 16, 3. Diodore, xvii. 64, 5.

On no sait quand le satrape commença sa longue carrière, mais il est probable qu'il fut placé avant 360 à la tête de la Cilicie et qu'il succéda après 351 à Bélésys, tout en gardant le gouvernement de la Cilicie, dont l'administration semble avoir été confiée à Arsamès.

Il a donc pu battre monnaie pendant près de 30 ans en Cilicie et pendant plus de 15 ans en Syrie, pour lo roi de Perse et pendant 3 ans à Babylone, pour Alexandre le Grand. C'est ce qu'il no faudra pas oublier quand nous constaterons que les premières monnaies d'Alexandre, frappées en Asie, font immédiatement suite à celle de Mazaïos.

Examinons maintenant les émissions ciliciennes, marquées du mot פזדי, telles qu'elles ont été réunies dans l'ouvrago du Duc de Luynes.

Au premier abord il semblerait que les statères, gravés Pl. VIII. n. 3 ct 4, sont de date bien antérieure au milieu du 4º siècle. Le type du revers est placé dans un carré creux, bien distinct sur le n. 4 et non moins visible sur un exemplaire du British Museum (Pl. V. 11).

Cela nous reporterait aux premières années du siècle, car parmi les monnaies d'Euagoras I., qui régna à Salamine do 410 à 374, il n'y en a qu'uno seule sur laquelle un carré creux soit visible 15 et les monnaies de Tiribaze et de Pharnabaze n'en montrent pas de trace.

Pourtant cetto objection n'est qu'apparente. A Cos, où le carré creux était déjà tombé cu désuétudo sur les anciens tétradrachmes au type d'Apollon et du crabe, 16 l'usage d'un coin carré pour le revers est repris après la restitution

¹⁵ Revue Numism., 1889, p. 282, n. 9.

¹⁶ Imhoof-Blumer, Monn. Greeq. p. \$19, n. 101, 102.

de la ville, en 366, sur les monnaies à la tête d'Hercule. Il en aura été de même à Tarse, vers la même époque.

Mais ce revirement d'archaïsme ne fut pas de longno durée. Le même coin qui sert à merquer le droit du statère, Satr. Pl. VIII. 3, où le carré creux est bien epparent, est bientôt employé à frapper le n. 6, Pl. VII., dont le revers n'a plus rien d'archaïque.

Le type du revers so modifie en même temps.

Le groupe du lion terrassent un daim, d'origine Cypriote, est abandonné pour le type de Tarse, un lion dévorant un taureau.

Le daim, attaqué cetto fois par un griffon, est résorvé pour les hémistatères du dynaste de Cappadoco, Arierathe, car ceux-ci, quoiqn'ils n'appartiennent pas directement à la série, s'y rattachent pourtant et en sont des copies évidentes.

Au droit, Baaltars tourne la têto de face et un aigle, réservé jusque là aux oboles, vient so joindre aux symboles que le dien tient à le main. Puis ces symboles disparaissent, mais l'aigle reste et c'est ainsi que le type est adopté par Alexandre pour le revers de ses tétradrachmes. 17

Là donc où finissent les émissions de Mazaïes, commencent colles d'Alexandre. Il n'y a pas de lacune apparente.

De l'autre côté, la série entière du satrape se relio immédiatement aux statères du soi-disent Datame, Satrapies, Pl. II., 1.5, auxquelles Mezaïos e emprunté lo Baaltars assis sur son siège, tenent l'épi et la grappe d'une main et le sceptro de l'autre, la tête tantôt de face et tantôt de profil. En même temps le graveur de Mazaïos a conservé la pose des divinités qui se voient sur

¹⁷ L. Müller, Numism. d'Alexandre, p. 98.

les statères de Sidé, de Nagidos et sur ceux d'Issos sous Tiribazo et qui sont tournés à gauche, la main droite étendue pour tenir une patère ou un de leurs symboles et qui s'appuyent de la gauche sur un sceptrè ou sur un arbre placé à côté d'eux. C'est cette manière de tenir le sceptre qui permet de distinguer du premier coup d'œil les monnaies, dont la description va suivre, le des autres monnaies eiliciennes de Mazaïos, qui formeront un second groupe.

I.

TARCAMOS.

(Dernès, d'après le Duc de Luynes, Datamés d'après M. Waddiugton.)

Entre 380 et 360 environ.

- Baaltars, lo bas du corps drapé, assis à droite sur un siège, tenant de la main gauche un oiseau (colombo ou aigle), les ailes éployées, à g., et de la droite un sceptre surmouté d'une fleur. Ccrcle.
 - Rev.—Tête de Pallas, portant le casque athènien à cimier, orné de feuilles d'olivier, à droite. Cercle.

Ceux qui prendront la peine de placer les monnaies, qui viennent d'être décrites, les unes à côté des autres, dans l'ordre indiqué, comme elles le sont en co moment devant moi, en original ou en empreintes, seront, je le crois, de mon avis que les émissions se suivent assez régulièrement, et so rattachent les unes aux autres depuis Tarcamos jusqu'à Séleueus.

De nouvelles découvertes pourront bien compléter cette série, mais ne modifieront pas sensiblement le résultat obtenu. Il n'y a pas d'apparence qu'Arsamès, satrape de Cilicie en 333, ait battu monnaie à d'autres types. Il aura continué les émissions de Mazaïos, auquel il pout bien avoir été subordonné, et rien n'empêche de croire qu'on reconnaîtra un jour des statères pareils aux n. 22 ou 23, marqués de ses initiales.

Le nom de Tarcamos, que j'ai mis en tête de la série, no peut manquer de paraître singulier à ceux qui se sont habitués à la transcription הרבשר, Datamès, proposée par M. Waddington, approuvée en la modifiant en הרדשר, par M. Judas et depuis adoptée généralement. Mais l'avant-dernière lettre n'est pas un nun, comme l'ont eru le Duc de Luynes, Blau, et M. Waddington, ni un daleth, comme

l'ont supposé Fr. Lenormant et A. Judas.²² C'est un caph.

Le nun, partout où il est certain, comme dans בעכא אלככנדר, עברנהרא, פרנכזר, a toujours cette forme-ci, 4.

Le caph de אות et בלך est ainsi formé ש, א, א. Or ces dernières formes sont justement celles de la troisième lettre du mot en question, qui vario entre и et ч.

Il faut dono lire תרכמו ou חרכמו, et transcriro Tadacmo ou plutôt Tarcamo(s).

M. Waddington a fait voir quo l'orthographe un du nom de Tiribaze exclut la transcription Tiri pour les initiales un, quand le jod n'est pas ajouté. Il ne reste donc qu'à lire Tarcamo(s) ou Tarcommo(s), et dès lors toute analogie avec un nom perse, et surtout avec celui de Dutame, 24 disparait complètement.

Tarcamos, dont le nom rappelle celui de Tarsos et des dynastes ciliciens Ταρκόνδημος et Ταρκονδίμοτος, 25 surtout s'il était permis de lire Tarcommos pour Tarconmos, est évidemment un prince indigène, fils ou descondant du roi Sycnuesis, qui régnait à Tarso cu 401.26

Il a été investi du gouvernement do la Cilicio par lo roi de Perse, commo lo prouve le statèro n. 3, qui nous

²² Cette transcription vient d'être adoptée par M. Noeldeke, Goett. gel. Anz., 1884, p. 298.

Rovue Numism. 1860, p. 439; 1863, p. 114. Catal. Behr, p. 159.

²⁴ Datames ou Dotamas est bien un nom perse. Oatre celui qui est devenu célébre on rencontre un Datamas dans Eschyl., Perses 937, ct un autre dans Xenophon, Cyrop. 8, 3, 17. Comment croire qu'un nom si simple eut été rendu en araméen par במבון plutôt que par ארובון? v. Noeldeke, Goett. gel. Anz., 1884, p. 208.

Woir Proceedings of the Soc. of Bibl. Arch. V. (1883), p. 42, 48.

^{*} Xénophon, Anabaso, I. 2, 12, 28, 27.

le montre en costume de satrape perse, mais il était en même temps dynaste cilicien, à en juger par les statèrea n. 4 et 5, où on le voit, vêtu comme un grec, et tête nue, en adoration devant le Dieu de ses pères NON (Anas?), qui l'investit et lui confirme le ponvoir que Tarcamos réclame à titre héréditaire, comme l'a bien reconnu M. Judas, et qui par sa complète nudité et par le nom inconnu qu'il porte, me semble parfaitement caractérisé comme uno divinité cilicienne et non perse. Ainsi toute analogie s'évanouit entre ce uom divin Ana(s?) et celui d'Anaphas, ancêtre des rois de Cappadoce, et dont Datame était aussi censé descendre. Car Anaphas ou Onophas est un nom perse très régulier.

Les deux statères, n. 3 et 4, 5 sont contemporains et so foit pendant. Ils indiquent bien la double qualité de Tarcamos, roi pour les Grecs et les Ciliciens, satrape pour les Perses, exactement comme son contemporain Maussolle l'était en Carie.

Il n'est guère possible d'assigner une date précise au règne de ce personnage, mais comme les types de quelques-uns de ces statères sont pareils à ceux de Pharnabaze et qu'après la graude révolte de l'an 362, à laquelle les Ciliciens prirent part, so commencent, à ce qu'il paraît, lee émissions de Mazaïos, il me semble qu'on peut placer provisoirement eutre 380 et 362 les monnaics assez abondantes de Tarcamos. Tant que Pharnabaze était satrape de Cilicie, ce que la légende אמרים le démontre avoir été, si

١

²⁸ Judas, Rev. Num., 1863, p. 112.

³⁹ Je dois toutes ces données sur les noms perses à l'obligeance de M. Nooldeke.

³⁰ Diodore, XV. 90.

³¹ Noeldeke, Goett. gel. Anz., 1884, p. 298.

Turcamos n'aura été que dynaste, mais quand Pharnabaze fut rappelé, vers 373, o'est lui qui aura été investi do la satrapio qu'il aura régie jusqu'à ce qu'il fut remplacé par Mazaïos vers 362,

Les autres monnaies de cette première série donnent lieu à plus d'une remarque.

Les oboles n. 1 et 2, quoique anépigraphes, se rattachent trop aux statères n. 3—5, pour ne pas les croire frappées par le même personnage.

Mazaïos, en prenant les rênes du gouvernement, imite Tarcamos en tant qu'il adopte pour le droit de ses statères ot de ses oboles le type de son devancier, tout en y apportant quelques modifications légères qui le simplifient sans eu changer la valeur.

Au revers, il remplace les types politiques par les symboles des divinités principales, le combat du lion et du duim pour les statères, l'aigle et le lion pour les oboles.

Ce lion qui terrasse un daim est emprunté aux monnaies des rois de Cition en Cypre, où on le rencontre déjà au cinquième siècle sous Baalmalek et Azbaal. Après avoir été abandonné sous Démonicos, il est repris pur Mélékiathon, dont le régne dure de 368 environ jusqu'en 362,82 cc qui est justement la date où Mazaïos semble être devenu satrape. Cette coïncidence me paraît d'autant moins fortuite, qu'un statère, que j'ai cru devoir attribuer à Mélékiatbon, combine les types de Célenderis, de Cilicie et de Cition. La seule explication que j'ai à offrir pour

²² Rev. Num., 1883, p. 328 s.

³² Ibid. p. 335, u. 4. Hercule debout, étonfiant le lion, est un type commun au roi cypriote Démonices et à un des statères de Mallos de Cilicie, qui est sans doute contemporain de co roi. Sur ce type attique, fréquent à Héraclée de Lucanie et qu'on retrouve en Péouie sous Lyccoies, voyez Poole, Num. Chron., troisième ser., 1883, p. 274.

cette adoption d'un type cypriote par le satrape de Cilicie, c'est qu'en 362 commence le règne de Pymiathon à Cition, et que ce roi n'a fsit battre que des monnaies d'or. L'argent de Mazaïos était peut-être destiné à circuler comme division des hémidariques de Pymiathon, et alors la reprise du carré creux, qui avait déjà disparu à Tarse, mais qui se maintient à Cition jusqu'après Alexandre, serait toute naturelle. Il s'en suivrait, peut-être, qu'après quo la grando révolte de 362, contre Arta-xerxès, à laquelle priront part les Ciliciens, les Phéniciens, et presque tous les habitants de la côte, ⁸⁴ eut été comprimée, le roi de Perse eut détaché l'îlo do Cypre do le cinquième satrapie pour la réunir à la Cilicie, dont il venait de confier la satrapie à Mazaïos. Le nouveau type indiquerait ce changement.

Le type cypriote ne resta en usage que quelques aunées, et fut alors remplacé par le groupe du lion et du taureau, que les monnaies qui serout décrites plus loin, p. 156, n. 13, montreut avoir été un des types dont la ville de Tarse s'était servi auparavant.

Le daim émigre alors en Cappadoco, où Ariarathe lo place sur ses hémistatères, groupé avec un griffon qui s'acharne sur lui.

Il est vrai que ces monnaies nouvelles no sont pas ciliciennes, et qu'au droit so lit בעלנזיר et בעלנזיר au lieu de בעלנזיר, mais le style (Pl. V. 12 comparée avec 13, 14), les ferait eroire frappées dans l'atelier de Tarso. C'est là peut-être qu'Ariarathe fit graver les premiers coins, quand lo besoin se fut fait aentir de mettre en circulation des espèces à son nom, et qu'on composa pour lui des types aussi semblables que possible à ceux du satrapo

³¹ Diodore, XV, 90.

do Cilioie, afin d'en rendre la eirculation plus facile. Car il est très probable qu'à défaut d'autre monnaie, les statères de Tarse et d'autres villes avaient depuis long-temps cours en Cappadoce. C'est du moins ee qui semble ressortir de la eomposition d'un trésor, découvert à Césarée do Cappadoce vers 1850, où les statères de Tarcamos et de Tarse (sous Mazaïos, sans douto), étaient ontremêlés à de nombreux statères d'Aspendos, au type des lutteurs. Le poids de la monnaie d'Ariaratho, qui est juste la moitié de celui des statères cilieiens, dût aussi contribuer à les faire accepter avec fuveur.

La seconde ou plutôt la troisième émission de ces hémistatères, avec ses caractères carrés et moins bien formés, peut avoir été faite en Cappadoco même.

Sur plusieurs exemplaires la légende du droit est בעלנזיר au lieu de בעלנזיר. C'est une forme qui répond encore mieux au nom de la ville que les Grees rendaient par Γαζίουρα.

M. Halévy traduit בעלתרו par habitants de Tarse, ee qui équivaudrait à ΤΑΡΣΕΩΝ, et à l'appui de eette opinion on pourrait citer les légondes מבעלביכץ, מבעלאנדר, des monnaies de Gadès, de Sexs, et do Panorme. Mais il faudrait alors rendre aussi מבעלבור par habitants de Gazicura, ΓΑΖΙΟΥΡΩΝ.

Or, il est très improbable que les habitants de la résidenec des rois de Cappadoce, ce qu'était Gazioura,³⁷ aient joui, à cette époque, d'une autonomio assez grande pour battre monnaie à leur propre nom, même en y ajoutant celui de leur souverain.

Blau, de Numis Achaemenidarum, 1855, p. 16, n. 25, d'après une communication de M. Meyer de Smyrne.

Mélanges, p. 67, où il compare σου ος, Juges ix. 2, 3.
 Strabon, XII. 13. Γαζίουρα, παλαιὸν βασίλειον, νὸν δ' ζρημον.

Quand les noms de Datame, d'Ariarathe, et d'autres dynastes se lisent sur les monnaies de Sinope, le nom des habitants de la ville est supprimé.

Le plus simple est donc d'admettre que la légende Baalgazier ne doit son existence qu'au désir de copier aussi littéralement que possible les statères au Baaltars, et qu'à cet effet en s'est borné à romplacer la nom de la capitale de Cilicie par celui de la résidence d'Ariarathe.

Cet Ariarathe est, sans doute, celui que Perdiccas fit périr en 322, et qui avait alors atteint l'âge de 82 ans. ²⁸ Il était donc né en 405. A en croiro la généalogie des rois de Cappadoce, conservé par Diodore, ²⁹ il aurait été fils d'un premier Ariarathe, fils à son tour d'Ariamnès, qui eut pour père le Datame bien connu et pour oncle Arimnaios.

Mais cette généalogie contient dans son état actuel des erreurs si palpables, qu'elle ne pourra servir de document historique qu'après avoir été corrigée et restituée sur plusieurs points.

Un règne do ciuquante ans d'Ariannès ne peut êtro intercalé entre Datame, mis à mort en 362 environ, et entre un Ariarathe, dont lo frère Olopherne aurait pris part aux expéditions du roi Ochus coutre l'Egypte, entre 359 et 344.

Puis ce premier Ariaratho n'a pu être le père d'un Ariarathe, né en 405, et qui avait plus de cinquante ans à

²⁸ Lucien, Macrobes, c. 18. Si, en 331, Ariaces vient se joindre, à la tête du contingent des Cappadociens, à l'armée de Darius, c'est qu'Ariarathe avait alors 78 ans et qu'il se sera fait remplacer par un fils on un nevou. Arrien, Anabase, III. 8. 5. M. Noeldeko identifie Ariace et Ariarathe, Goett. gel. Anz. 1884, p. 296.

³⁹ Diodore, XXXI. 19.

l'avénoment d'Ochus. Tontes ces difficultés s'évanouissent en admettant que les deux Ariarathes no sont qu'un seul et même personnage, Ariarathe I., né on 405, mort en 322 et que de même, Arimnaios et Ariamnès ne font qu'un, Ariaramnès I., père d'Ariarathes I. et roi de Cappadoce pendant 50 ans, do 410 ou 400 à 360 ou 350 environ. Il scra né vers 430. Si dans cotte généalogie Datamo lui est donné, d'abord comme frère aîné, puis comme pèro, o'est que le fils de Camisarès, ce que Datame était en effet,40 s'était rendu maître de la Cappadoce et même de la Paphlagonio 41 et qu'il avait intérêt à être admis dans la liste officielle des souverains de la Cappadoce et à êtro considéré commo descendant légitime du fondateur de la dynastic, Anaphas, fils d'Otanès, un des sopt Perses qui se conjurèrent avec Darius, fils d'Hystaspe. La généalogie, conservée par Diodore, nous fait voir comment on s'y prit pour transformer Dataine, do cousin ou parent éloigné, ce qu'il peut avoir été, en frère et père du roi qu'il avait dépouillé de ses états et qui no les recouvra qu'après la mort do l'usurpateur.

Pour expliquer lo dédoublement d'Ariaramnès et d'Ariarathe il faut cependant une autre hypothèse. Faute de mioux, je propose la suivante.

Toute cotte généalogio n'aurait-elle pas été tirée do quelque grand monument, élevé par un des rois de Cappadoce, dans le genre du tembeau d'Antiochus I., roi de Commagène, qui vient d'être retrouvé sur le Nemruddagh?⁴³ Une suite de basreliefs ou de statues auraient

VOL. IV. THERD SERIES.

mis en regard les dynastes de Cappadoce et les rois de Perse et de Syrie dont la dynastie cappadocienne descendait par les femmes.

Envisagé sous ce point de vuo, la liste devient plus logique. On comprend qu'un dynaste ait pu être représenté deux fois, vis-à-vis des deux souverains dont il a été le contemporain l'un après l'autro; on s'expliquo lo règne de 50 ans d'Ariamnès, parallèlo à celui d'Artaxerxès II. de près d'un demi sièclo; puis, Datame et Arimnaios devenus frères par leur union fraternelle sur la mêmo plaquo do marbre. Ce qui reste obscur sont les relations que cet Arimnaios aurait eues aveo Darius II., et qui l'auraient fait mettre lui et Datame en face de ce roi plutôt que d'Artaxerxès II.

Voici comme so seraient répondu ces images des ancêtres d'Ariarathe VI.

Pharnacès, épeuse Gallos, Smerdis. Artanmes (Ariaramnes, Ctesias, Anaphas (fils d'Otanès), un des sept Perses, Anaphas, Datames-Arimnaios, Ariamnas, règne 50 ans, Ariarathės I.—Olophernės, Ariarathès II., tue en 322, -Arysas, Ariarathės III., Ariamnès, Ariarathès IV., épouse Ariarathes V., eponso

Antiochus I. ou Antiochus II.
Stratonice, fille d'Antiochus III.
Antiochis, fille d'Antiochus III.

Si la série, au type cyprioto du daim terrassé par le lion, commence après la grando révolte de 362, quand finit-elle? Et à quelle époque commence l'adoption par

Mazaïos du nouveau type, un taureau terrassé par le lion, qu'il emprunta aux monnaies de la ville de Tarse 43 (Pl. V.

- 3). La réponse me semble donuée par les statères sur lesquels Mazaïos prend le titre de satrape de Syrie et de Cilicie et qui sont empreints du mêmo groupe 4 (Pl. VI.
- 1). Ceux-ci ne font pas partie de la série décrite plus haut. Le Baaltars est autre; il descend en droite ligne de celui que Pharnabaze a placé sur quelques-uncs de ses mounaies (Pl. V. 7) et se continue sur les statères au revers d'un lien, jusque sous les Séleucides.

C'est une soconde série dont la description va suivre et qui est, d'un bout à l'autre, contemporaine de la première.

Quoique la raison d'être de ces deux séries parallèles ne soit pas tout à fait claire, notons pour le moment que le changement de type dans la première coïncide probablement avec les nouvelles fonctions auxquelles Mazaïes fut appelé en succédant, vers 350, au satrape de Syrie, Bélésys, et constatons qu'une neuvelle révolte avait éclatée et que le roi de Perse dut reconquérir l'île de Cypre tout aussi bien que la Phénicie.

Ces événements ont pu altéror les rapports du roi de Cition avec le satrape de Cilicie et induire Mazaïos à faire disparaître de ses statères le type cypriete.

Æ. 2½. 5.72. Brit. Mus. Num. Chron. N.S. i., 1861, p. 187, n. 5, viguettc.

La tête de Bucéphale et l'ancro servent de types sur plus d'uno mennaie de Seleucus I., de son fils Antiochus I., auquel il avait cédé la partie orientale do son royaume et peut-être d'Autiochus II. Les lettres Δ1, probablement les initiales d'un officier monétaire ou d'un hyparque, so lisent mainte fois sur les monnaics de ces rois, v. Cat. Brit. Mus., Kings of Syria, p. 1—5. Num. Chron., N.S. xix. 1879, p. 9. Cunningham, l. e. p. 178, n. 67.

Cette seconde série donne encore lien à quelques remarques. Les statères à la légende KIAIKION et ceux de Pharnabaze et de Tarcamos, ont pu être émis pendant tout le temps que Pharnabaze a passé en Cilicie en préparatifs pour les expéditions contre l'Egypte revoltée. La première eut lieu entre 390 et 387 environ, comme l'a exposé M. Wiedemann, la seconde de 377 à 374. En 372 elle n'était pas encore terminée, mais Pharnabaze semble avoir été rappelé et avoir été remplacé par Datamo. Celui-ci, à peine arrivé, jugea prudent de quitter ce poste, pour se retirer en Cappadoce, où il fut tué vers 362. Tout ce groupe de monnaies, n. 2—7, peut dont être placé entre 394 et 372.

67 Gesch. Aegyptens, p. 281.

⁴⁸ Diedore, XV. 29 et 41. "Ετη δε πλείω του Φαρναβάζου κατανηλωκότος περι τας παρασκευάς.

Les statères qui constituent le groupe suivant, n. 8, et dont le poids est souvent très élevé, me semblent antérieurs de style au statère de Pharnabaze, n. 7, auquel se relient immédiatement les n. 10 et suivants. Ils font suite aux monnaies que voici:

Pallas Athène, en chiton et le has du cerps enveleppe dans le manteau, pertant le casque athénien à triple cimier, assise à gauche sur un recher, centre l'elivier qui lui est censacré, tenant de la main dr. sa haste devant elle et appnyant le bras g. sur sen beuclier.

Rev.—Aphredite, à ganche, appuyée sur une celenne, par laquelle sen temple est indiqué, pese la main dr. sur l'épaule de Hermès qui, le caducée dans la main dr. et le bras g. ceuvert de la chlamyde, est debeut de face, se dispesant à partir. A dr. MAA.

En 374, comme l'u démontré M. Wiedemann, 49 Pharnabaze persuudu les Athéniens à ruppeler Chabrias d'Egypte, où il assistuit le roi Nectanebus contre les Perses et à lui enveyer Iphicrate pour commander les vingt mille mercenaires Grees, 50 onrolés par les Perses. Pur là, l'alliunce des Athéniens avec l'Egypte, qui avuit commencée

⁴⁹ Gesch. Aegyptens, p. 282.

⁵⁶ Diodore, XV. 41.

sous Amasis, fut rompue et Pharnabazo reprit l'offensive contre les Egyptiens avec ses nouveaux alliés. C'est bien alors qu'Athéné, la déesse tutélaire d'Athènes, in mérita d'être placée sur les monnaies de Mallos et de Tarse, au revers de l'Aphrodite et du Baal ciliciens, surtout s'il est permis de supposer qu'Iphierate ait été chargé de conclure un traité de commerce entre Athènes et les villes ciliciennes principales tout en aidant Pharnabaze. Aussi je propose de fixor la date d'émission de ces rares monnaies à cette même année 374. Co qui me frappe surtout, c'est l'exacto ressemblance de pose eutre cette Pallas d'Athènes [Pl. V. 5] et le Baal des statères n. 8 et 10 et encore avec celui de Pharnabaze n. 7 [Pl. V. 7]. Toutes ces pièces sont contemporaines et l'Athéné est le prototype de la série.

Les lettres I, M, Σ et T, sous le siège de Baal, des statères n. 8 et 11, désignent-clles les villes voisines Issos, Mallos, Soli et Tarse, qui se seraient réunics pour battre monnaie en commun dans l'atelier do la capitale? On l'admet généralement⁵² et rien ne prouve en effet le contraire. Pourtant la présence, à la même place, d'une autre lettre T qui équivaut à un double Σ , 63 n'est pas très favorable à cette hypothèse. Peut-être ne faut-il chercher dans ces lettres

⁵¹ Cette Pallas semble copiée d'après ua de ces bas-reliefs, qui servaient de vignettes aux traités conclus entre Athènes et des villes étrangères pendant le quatrième siècle, et qui ent été réunis par M. Schoene, Griech. Reliefs, 1872, voyez T. viii. 50, ix. 52, et xxi. 92.

⁶³ Luynes, Satrap., p. 64; Blan, Z. d. D. M. Gesellsch. vi. p. 5 du tirage à part.

blement le Trade de l'alphabet phénicien, tombé d'assez bonne heure en désuétnde chez los Grecs et quin'a servi plus tard qu'à noter le chiffre 900. Dans cette dernière fonction il est désigne d'ordinaire par le nom de Sampi. M. Clermont-Ganneau, Mélanges Graux, 1884, p. 458—459, est d'un autre avis.

que des initiales d'officiors monétaires. La date des statères n. 12, sur lesquels Mazaïos prend lo titro do satrape do Transouphratique et de Cilicie, scra discutée plus loin en traitant de la 4º série. C'est à la fin du règne d'Ochus, vors 340, qu'ils ont été émis. Le changement do type, sur lo n. 13, quand un lion seul remplace le groupe du lion dévorant un taureau, semble indiquer un nouveau régne et peut coïncider avec l'avènement d'Arsès en 338 ou de Darius III en 336. Mais il est moins faeile de se rendro compte de l'absence de légende sur les statères n. Le typo est celui do Mazaïos. Pourquoi son nom est-il omis? Sont-ce des monnaies émises par la ville de Tarso pour son propre compte, aux types du satrape? C'est bien probablo. Quand on voit que les lettres dans le champ des monnaies de Mazaïos sont phéniciennes, tandis qu'ici elles sont grecques, on est conduit à admettre qu'il y avait alors à Tarse deux ateliers de monnayage, l'un pour le satrape, où travaillaient des phéniciens, l'autre pour la ville que conduisaient les Grecs. Les deux murs, flanqués de tours, sont, sans doute, les fortifications, décritos par Xénophon,54 qui défendaient la route à travers le défilé qui sépare la Syrie et la Cilieie. Ils symbolisent parfaitement le fait que la sureté des deux provinces, jadis séparées, était maintenant confiée à la garde d'un seul dignitaire.

Rien, jusqu'ici, ne s'est opposé à l'attribution proposéo par M. Halévy. Mais la difficulté commence des qu'il

⁶⁴ Anabass, I. 4, 4: ἐπὶ πύλας τῆς Κιλικίας καὶ τῆς Συρίας ἢσαν δὲ ταῦτα δύο τείχη καὶ τὸ μὲν ἔσωθεν τὸ πρὸ τῆς Κιλικίας Συὲννεσις εἶχε καὶ Κιλίκων φυλακή τὸ δὲ ἔξω τὸ πρὸ τῆς Συρίας βασιλέως ἐλέγετο φυλακὴ φυλάττειν διὰ μέσου δὲ ῥεῖ τούτων ποταμὸς Κάρσυς ὄνομα, εὖρος πλέθρου, etc.

s'agit de classer à Mazaïos les quelques tétradrachmes de poids attiquo, énumérés sous le n. 14.

Car on admet généralement que le poids attique a été introduit en Asie, pour les monnaies royales, par Alexandre le Grand.

Pourtant il est bien sûr que les tétradrachmes d'Athènes y circulaient en masse depuis longtemps. Il en a été trouvé à Idalion entremêlés aux monnaies des rois do Chypro. 55

Les fractions sont imitées à Gaza, où les premières émissiona sont de poids attiquo qui s'affaiblit lentement.⁵⁶

On pourrait done admettro que ees tétradrachmes do Mazaïos ont été frappés pour les besoins d'une partie de sa vaste satrapie, où les habitants étaient accoutumés do longue date à se servir de monnaics athéniennes. Après la bataille d'Issos, il ne lui restait plus que la Syrie, au delà de l'Euphrate, où il s'était retiré et la légende raise n'est pas une preuve décisive que ces tétradrachmes sorteut de l'atelier de Tarse. Elle était consacrée par l'usage et elle aura continué d'accompagner le type de Baal, lorsque lea monétaires phéniciens eussent quitté la capitale et se fussent retirés en Syrie devant l'armée des Grees. Je voudrais même aller plus loin avec eux et les suivre jusqu'à Babylone, où Mazaïos est chargé du gouvernement par Alexandre. En même temps Menès est nommé hyparque de Syrie, de Phénicie et de Cilicie. Est

Num. Chron., N.S. XI. 1871, p. 17, n. 48 et p. 2.
 Num. Chron., N.S. XVII. 1877, p. 221—228.

⁵⁷ Arrien, III. 16, 9; Diodore, XVII. 64, 5. ¹Απολλόδωρον δὲ τὸν 'Δμφιπολίτην καὶ Μένητα τὸν Π΄ λλαιον ἀπέδειξε στρατηγοὺς τῆς τε Βαβυλώνος καὶ τῶν Σατραπειῶν μέχρι Κιλικίας. Krumbholz, ds Asim minoris Satrapis persicis, Lips., 1883, p. 76, 2.

Dono touto l'ancienne province de Mazaïos reste réunie sous le point de vue administratif et financier.

Serait-il done si impossible d'admettre qu'Alexandre, qui changeait aussi peu quo possible dans l'administration organisée par los Perses et qui, au moment de partir pour l'extrêmo Orient, no s'est pas, bien certainement, occupé des types ou des légendes de monnaies destinées aux populations indigènes - qu'Alexandre, dis-je, eût authorisé Mazaïos à continuer, sous son nom et sous sa responsabilité, les émissions nécessaires aux transactions des Syriens et des Ciliciens entre eux, à condition de les conformer au nouveau poids de la monnaio royale? Quelque solution que l'on adopte et malgré l'obseurité qui plane encore sur ce sujet, la difficulté ne me paraît pas assez grande pour refuser de reconnaître dans le mot מדרי le nom du satrape Mazaïos. Quand son nom et en même temps eolui de Baaltars disparaissent, la série continuo, d'abord sans changement. Puis le Baal, devenu sans donte le Zous des Grecs, preud une pose un peu variée et alors commonce une longue suite de variétés, suffisante à remplir tout lo temps quo la Cilicio resta an pouvoir d'Antigone et de son fils Démétrius, pour continuer et se terminer sous les premiers Sélencides.

M. Imhoof-Blumer a déjà remarqué se que les symboles ot les monogrammes rattachent cette sério de tétradrachmes au lion aux doubles dariques d'or dont ils somblent être les divisions et aux monnaies d'Alexandre, qui terminent la première série de Mazaïos.

Cette remarque peut nous mettre sur la voie de découvrir la raison d'être des deux séries contemporaines et parallèles que je viens de décrire. La première se com-

Monasies Grecques, p. 376.

poso des mounaies royales, frappées par le dynaste Tarcamos, par le satrapo Mazaïos, qui lui succéda, et enfin par Alexandre le Grand et ses auccesseurs.

A la seconde appartiennent les monnaies de la ville de Tarse et celles qu'ont fait battre dans l'atelier de la capitalo lo commandant en chof des forces perses, Pbarnabaze et Mazaïos quand il fut devenu satrape de Syrie. dono fort possible quo les monnaica de Tarcamos, pareilles à celles de Pharnabazo et celles do Mazaïos, au type du lion, ne sont pas à considérer comme des monnaies royales, mais commo des émissions faites par la ville ou par la province ct qui ne portent le nom du dynaste ou du satrape que comme les bronzes frappés par les villes d'Asie, sous l'empire romain, portent la tête et le nom de l'empereur régnant. En toat cas, les tétradrachmes au lion, les doubles dariques, et autres monnaies à types archaïques, comme nous vorrons tantôt, n'auraient pas continué d'êtro mises en circulation pendant plus d'un demi siècle après la chato de l'empiro perse, si ces pièces n'avaient pas été frappées par une autre autorité que celle qui faisait battre la monnaie royalo.

III.

La troisième aérie, qui ne contient que deux mennaies au nom de Mazaïes, se compose de tétradrachmes, drachmes, et fractions de drachme, copiés servilement d'après ceux d'Athènes, et qui se distinguent souvent à peine de lours prototypes. Sur quelques-una pourtant la légende est autre et des symboles ou monogrammes étrangers s'observent dans le champ.

J'ai donné la liste de celles do ces pièces qui m'étaient alors connues dans le Numismatic Chroniclo de 1877, p. 223—226, n. 12—21, 25, ot depuis j'en ai vu et acquis d'autres encore.

Ici je no décrirerai quo celles de Mazaïos et une autre, toute nouvelle:—

- Tête de Pallas, portant le casque athénien, à cimier et des hoocles d'oreilles, à droite. Style négligé.
 - Rev.—Choo ette à droite, la tête de face. Derrière pousse d'olivier et creissant. Devant ⊈, אס retrograde (≲ ∪) et לאן ש, אסף, la dernière lettre indistincte.
 - R. 6. Empreinte au British Moseum. (Pl. VI. 9.)
- 2. Autre, sans yn, le jod de la lègende indistinct.
 - R. 6/5. 16.95. Coll. Imhoof-Blumer. Monn. Greeq. p. 369, 63. Choix, Pl. V. 177.
- 8. Autre, devant O et אווף, מזרר ou מזרר ou מזרר. R. 6. Empreinte au British Museum. (Pl. VI. 10.)

Le flan du n. 2 est très épais, et les bords sont coupés droit comme ceux des doubles dariques d'or et des tétra-drachmes de Tarse, au lion, sans légende. Cotte forme de flan, jointe au monogramme et à la lettre grecque, pois au mem et au yo, retournés à la manière grecque, obligo de placer ces tétradrachmes, aux types d'Athènes, aussi tard que possible, dans les dernières années du gouvernement de Mazaïos, et bien probablement après 331, quand il était satrape de Babylone.

Cette idée m'est venue par l'étude des monnaies suivantes, provenant de la grande trouvaille des bords de l'Oxus.

- 4. Tête de Pallas, comme sur les n. 1—3, mais de heo style.

 Derrière 2.
 - Rev.—Chonette, pousse d'olivier et croissant, comme sur les n. 1—3. Devant AOE.
 - A. 6. 16.85. Coll. Cunoingham. Jenra. Asiat. Soc. of Bengal, 1881, I. p. 174, n. 82, Pl. XVIII. 1.

R. 4. 7.84. Cunningham, n. 33.

,, 4. 6-98 fraste. Nam. Chron., N.S., xix. 1879, p. 10, Pl. I. 7. Le monogramme effacé.

- 6. Baaltars assis.

Rev.—Lion, à g. Dessus ancre des Séleucides et P. Dessous croissant et le monogramme du n. 4.

R. 6. 16-78. Cunningham, l. c., p. 176, n. 42. Un exemplaire de la coll. de M. Waddington, décrit par M. Imhoof, Monn. Grecq. p. 378, n. 44, no diffère que par une légère variante dans la composition du monogramme.

AR. 6. 15-18. Brit. Mns. (Pl. VI. 7.)

Même types. Au-dessus du lion ancre, dessous le même monogramme.

R. 6. 15-70. Coll. Imhoof-Blnmer. Monn. Grecq. p. 878, n. 41.

Or comme le monogramme en question se rencontre sur des monnaies aux types d'Alexandre, 50 et sur celles de Seleucus I. et d'Antiochus I.,60 il me paraît parfaitement démontré que des tétradrachmes aux types d'Athènes ont été frappés en Orient jusque sous le règne d'Antiochus I. Il n'y a donc aucun obstaclo à admettre qu'il en a été do même sous Alexandre, et qu'à défaut de types propres à Babylone, le satrape se soit contenté de copier les tétradrachmes athéniens et les statères qu'il avait autrefois frappés à Tarse.

Ce qui me confirme dans cette opinion, c'est la légende du n. 3. Ici nous n'avons plus מודר, 61 Mazaïos, mais,

Müller, Alexandre, n. 1656, classe IV. et aillenrs.

⁶⁰ Cnuningham, l. c., p. 177, n. 50, 51. Nnm. Chron., N.S. viii., p. 102, Pl. VII. Syr., п. 9; Cat. Brit. Mus., Kings of Syria, p. 9, п. 12—14.

a Comme le jod n'est pas distinct snr les n. 1 et 2, il se pourrait que la légende fut la même que celle du n. 3.

ou plutôt החום (Mazaros). Or Arrien es nous apprend qu'-Alexandre, après aveir quitté Babylene, dent il avait laissé le geuvernement à Mazaïes, vint à Suse, où résidait le satrape perse Aboulitès. Celui-ci resta on possession de sa eatrapie, mais Alexandro lui adjoignit Archelaos, eemme stratège, et Mazaros, cemmo commandant de la garnison qui occupa l'acropole do Susc.

C'est ce Mazaros que je propeee de reconnaître dans la légende du tétradrachme, n. 3, qui aurait ainsi été frappé à Suse, peu après 331, probablement pour la solde des Grecs dont la garnisen était composée. Peurquei, me dira-t-on, no battait-on pas monnaie au nem et aux types d'Alexandre? C'est, ce me semble, parcequ'Alexandre n'a créé une nouvelle mennaie pour son nouvel empire qu'après en avoir terminé la conquêto. Jusquo là il se sera contenté d'introduire le poids attique, et aura laissé aux villes libres d'Asie et aux satrapes de l'intérienr le soiu de pourvoir aux besoins de la circulation journalière. ci se mirent à copier les monnaies les plus courantee, tétradrachmes d'Athènes, statères do Tarsc et autree peut-être, comme un eiècle plue tard les villee libres d'Asie copiaient les tétradrachmes d'Alexandre pour aveir une mennaie qui fut acceptée en Europe aussi bien qu'en Asie.

Outre ces cepies plus ou meins ecrviles des monnaies athéniennes, il y a uno série d'eboles et de fractions d'obele, à la même tête de Pallas, maie sur lesquelles la chouette du revers est remplacée par une tête de Bésa, de face, semblablo à celle que neus avons rencontréo dans la

⁶³ Anabase, III. 16, 9. 'Αλέξανδρος—καταλιπών σατράπην μὲν τῆς Σουσιανῆς 'Αβουλίτην, ἄνδρα Πέρσην. Φρούραρχον δὲ ἐν τῆ ἄκρα τῶν Συύσων Μάζαρον τῶν ἐταίρων καὶ στρατηγὸν 'Αρχέλαον τὸν Θεοδώρου.

série précédente, n. 5.63 Voilà donc la transition entre les monnaies ciliciennes et les copies serviles des monnaies d'Athènes.

M. Erman, qui les a fait graver, considère toutes ces pièces, à la tête de Bésa, comme frappées par les Arabes et je ne voudrais pas soutenir une opinien contraire. Mais il ne s'ensuit pas qu'il faille chercher ces Arabes hors des limites de la cinquième satrapie de Darius. Quand Théocrite 64 dit que Ptolémée Philadelphe s'est rendu maître d'une partie de la Phénicie, de l'Arabie, et de la Syric, καὶ μὴν Φοινίκας ἀποτέμνεται, 'Αρραβίας τε καὶ Συρίας, il désigne par ces trois noms l'ensemble de cette même satrapie, d'accord en cela avec Hérodote,65 qui nous apprend que les places maritimes sur la côte entre Gaza et Jenysos, ville proche de Rhinocorura, étaient en possession des Arabes; et avec Xénophon,66 dans lequel (I)dcrnès est nommé satrape de Phénicie et d'Arabie. Peut-être est-ce à ces Arabes que les monnaies en question doivent être assignées.

IV.

Outre ces trois séries il y en a encore une quatrième. C'est celle qu'aatrefeis j'ai proposé d'attribuer à Siden.⁶⁷

Je ne savais pas alors que מודי désignât le satrape de Syrie et de Cilicie et j'avais objection à adopter la proposition de Brandis, qui classe cette série à la Célésyrie, parce-

Erman, Zeitschr. f. Num. ix. 1882, p. 298, T. vi. 4-9; Num. Chron., 1877, p. 228, n. 36.

⁶¹ Théocrite, XVII. 86.

⁶⁵ Hérodoto, III. 5: τὰ ἐμπόρια τὰ ἐπὶ θαλάσσης μέχρι Ἰηνύσον πόλιος ἐστι τοῦ ᾿Αραβίου, ἀπὸ δὰ Ιηνύσου αἴθις Σύρων. Num. Chron., l. c. p. 293.

cs Anabase, VII. 8, 25.

⁶⁷ Num. Chron., 1877, p. 195—214.

que ce classement ne rend pas compte du type du vaisseau, voguant sur les flots et qui, sur les plus anciens exemplaires, inconnus à Brandis, est à toutes voiles.

Co n'est pas là un type approprié à une ville, située sur l'Oronte ou sur l'Euphrate, à Damas, à Hamath ou à Thapsaque. 63

Aussi je reste persnadé que cette série doit son origine à une des villes de la côte et qu'ello était destinée à circuler en Phénicie aussi bien que dans l'intérieur de la satrapie. Car celle-ci, la cinquième de Darius et l'ATTITU (TICUT) des textes hébreux) 69 ou Transeuphratique, comprenait tout le pays depuis Posidion jusqu'à l'Egypte: Célésyrie, Phénicie et Palestine ot en outre l'île de Chypre, comme il a été dit plus haut. Le type du navire a donc pu symboliser les forces navales et la puissance maritime, par lesquelles la satrapie surpassait toutes les autres, sans qu'il soit nécessaire de chercher le lieu d'émission dans la ville de Sidon dont lo rei commandait la flotte perse, surtout puisque c'est à Acé que cette flotte et l'armée se réunirent en 374.70

Ce qui surtout m'a fait changer d'opinion c'est un exemplaire des deubles statères décrits N. Chr. l. c. p. 201, II. 1; Head, Coins of Lydia, pl. II. 4—6, que j'ai cu l'occasion d'acquérir depuis peu et sur lequel les légendes, au droit et sous le navire, sont plus distinctes que de coutume.

C'est co qui m'a permis de constater que les lettres sont araméennes ou plutôt qu'elles ne sont pas phéniciennes et

71 Navire sur un quai, devaut un mur flanqué de cinq tours.

⁶⁰ Brandis, Münzwesen, pp. 232, 233; Head, Ceinage of Lydia and Persia, p. 43.

⁶⁰ Hérodete, III. 9. Esdras, 4, 10, 16; 8, 86; Néhémie, 2, 7, 9; 8, 7.

⁷⁰ Diedere, XV, 41. Της δε των Περσων δυνάμεως αθροισθείσης εις πόλιν Ακην-ών ήρχε Φαρνάβασος.

qu'ainsi l'attribution aux rois do Sidon ne peut plus être maintenue.

Du reste jo ne vois aucun motif de changor l'ordre dans lequel les divers groupes dont se composo la série ont été disposées. Tout co qu'il y a à fairo c'est de changor les dates assignéos, dans le Num. Chron., aux différentes émissions et de les reculor d'un quart do siècle environ.

Le premier groupe, p. 200, 201, I. n. 1—6, Head, pl. II. 1—3, serait donc frappé sous Darius II. (424—405).

Le second et le troisième, p. 201, II. 1—5, Head, pl. II. 4—12 ot p. 202, III. 1—6; Head, pl. II. 15—17, sous Artoxerxès II. (405—359).

Le quatrièmo, p. 209—212, IV. 1—11, Head, pl. II. 18—20, III. 1—9, depuis l'accession d'Ochus jusque sous Darius III. (359—333).

En effet, au lieu de faire commencer les monnaies datées, énumérées sur la table, p. 214 (sous Sidon) et qui constituent ce quatrième groupe, en 332, l'an 1 d'Alexandre, il suffit de les faire commencer en 359, l'an 1 d'Ochus, pour obtenir une concordance satisfaisante entre les dates associées au nom de Mazaïes et l'époque où ce satrape doit uvoir été en tête de la Transeuphratique.

Son nom so lit sur les pièces suivantes:-

R. 7. 25-64. Brit. Mus. (Pl. VI. 11.)

Les premières émissions sont d'un style passable; les dernières d'une exécution si mauvaise qu'il faut bien les ranger à la fin de la série.

Mazaïos paraît dono pour la première fois on 350, ou 349 si la date 10 (ou 11) qui n'est pas très distincte sur l'empreinte que j'ai devant moi, et qui ne l'est pas non plus sur l'original comme M. Head me l'assure, a été bien lue par nous. Le trait horizontal — (10) me paraît certain.

Puis on le retrouve en 19, 20 et 21 du règne d'Ochus (341-339), l'an 1 et 2 d'Arsès (338 et 337), enfin sans date, probablement sous Darius III. (336 suiv.).

Il y a en outro un grand nombre d'exemplaires sans le nom de Mazaïos. Ils portent les dates 1 à 10 et 13 du règno d'Ochus (359-350 et 347). Ces pièces ont dû être frappées sous l'autorité du prédécesseur de Mazaïes, Bélésys, quoiqu'on n'y lise pas son nom, mais seulement les lettres my, my ou mm.

Il me paraît fort probable, à présent, que ces lettres, dont le sens m'échappait autrefois,72 sont les initiales des noms

⁷² Num. Chron., 1877, p. 218.

d'officiers monétaires 'y et 'z, 'y et 'y, 'n et 'y, qui présidaient deux à deux à trois différents atcliers de monnayage.

Ces émissions parallèles, dans les mêmes années, me font supposer que les trois ateliers sont à chercher à Tripolis, capitale politique de la Phénicie et composée de trois villes distinctes, l'une des Aradiens, les antres des Sidoniens et des Tyriens. Le satrape et le stratège résidaient dans la ville des Sidoniens et là aussi était le paleis, qu'occupaient les rois de Perse, quand ils visitaient la Phénicie. C'est du moins co qui semble ressortir des expressions dont se sert Diodore.⁷³

D'après cette hypothèse, les monnaies en question auraient été frappées à Tripolis et notamment dans la ville des Sidoniens, par le satrape du roi de Perse. Ainsi s'expliquerait l'absence des monnaies de la ville de Sidon ellemême, les légendes plutôt araméennes que phéniciennes, le type du naviro qui convient si bien à Sidon et enfin l'interruption subite do ce monnayage au moment de la révolte de la Phénicie et la reprise après la ruine de Sidon

³ Diodore, XVI. 41: πόλις ἀξιόλογος—Τρίπολις—Τρεῖς γάρ εἰσιν ἐν αὐτἢ πόλεις—ἡ μὲν 'Αραδίων, ἡ δὲ Σιδωνίων, ἡ δὲ Τυρίων. 'Αξίωμα δ' ἔχει μέγιστον αὐτη τῶν κατὰ τὴν Φοινίκην πόλεων, ἐν ἢ συνέβαινε τοῦς Φοίνικας συνέδριον ἔχειν καὶ βουλεύεσθαι περὶ τῶν μεγίστων. Τῶν δὲ σατραπῶν καὶ στρατηγῶν ἐν τῇ Σιδωνίων διατριβόντων κ. τ. λ.—τὸν μὲν βασιλικὸν παράδεισον, ἐν ῷ τὰς καταλύσεις οἱ τῶν Περσῶν βασιλεῖς εἰώθεισαν ποιεῖσθαι—διέφθειραν.

et la rentrée du pays sous le joug des Perses. Car entre l'an 10, 350 (ou 11, 349) et l'an 19, 341, la table que j'ai dennée, p. 214, mentre une grande lacune de huit années, dans lesquelles en ne rencontre que quelques bronzes des années 11 et 12, 349 et 348, à la tête du roi de Perse, Ochus, sans lettres ni légende, et quelques oboles de l'année saivante 13, 347 aux initiales zy et yn.

C'est que dans cot intervalle la Phénicie s'était révoltée, Bélésys et Mazaïos, les satrapes de Syrie et de Cilieie, avaient été défaits par le roi de Siden, Ochus était venu en personne à la tête de l'armée des Perses, Siden, trahio par son roi, avait été brulée par ses habitants et l'Egypte avait dû se rendre et rentrer sous le joug des Perses en 344.

Dans les entrefaites Bélésys avait été succédé par Mazaïes et les dates des mennaies semblent prouver que cette nomination a eu lieu vers 350^{74} et que Diodere a eu raison on plaçant le commencement de la révolte en 351. D'après les bronzes aux dates 11 et 12, Ochus aurait résidé en Phénicie en 349 et en 348, et la ruine de Siden serait à placer dans cette dernière année. Il est à noter que la série datée des mennaies de Pymiathen, le rei de Citien, présente une lacune entre 348 et 342. Les Cyprietes s'étaient aussi révoltés.

Plus d'uno difficulté reste, sans doute, à résoudre et les hypothèses que j'ai proposées ne seront pas toutes acceptées, mais, après tout ce qui vient d'être dit, il n'y a

⁷⁴ Il se peut teutefois que le nom de Mazaïos ne se lise sur les distatères des années 10 ou 11, que parcequ'il se trouvait alors en Phénicie pour aider Bélésys à comprimer la révolte et qu'il n'a succèdé à ce dernier que plus tard, vers l'an 19 par exemple. De nouveaux exemplaires de ses mounaies, à dates plus distinctes, permettront de trancher la question.

pourtant pas d'obstacle sérieux, ce me semblo, à adopter la traduction Mazaïos, proposée par M. Halévy pour le mot ישם ou ישם et à classer toutes les monnaics, sur lesquelles ces lettres sont inscrites, à Mazaïos, satrape de Cilicie et peut-être de Chypro, de 362 environ jusque vers 350, puis satrape de la Transeuphratique et de Ciseuphratique, en même temps que de la Cilicie jusqu'après 336 et peut-être jusqu'à l'arrivée d'Alexandre en Cilicie, 333 et en Mésopotamie, 331; enfin, satrape de la Babylonie de 331 jusqu'à sa mort en 328; un des plus hant dignitaires de la cour de Perse. Sa longue carrière doit avoir été fort honorable, puisqu'il resta en faveur près d'Alexandre et que ses fils Antibelos ou Artibolos et Hydarnès le fureut après lui. 75

A moins donc que les bronzes de Mazaïos, mentionnés par M. Imhoof-Blumer, Monn. Grecq., p. 369, n. 38ª, mais qui n'ont pas encore été décrits, ne soulèvent des obstacles nouveaux, jo crois quo les numismatistes peuvent déjà admettre, sans scrupules, le satrape Mazaïos parmi les dynastes dont ils ont à enregistrer les séries monétaires.

TARSE.

Puisque la grande majorité des monnaies, dont il a été question dans cet article, est sortie des ateliers de Tarse, il m'a semblé qu'il y aurait quelque intérêt à ajouter, sous forme d'appendice, la liste des plus anciennes monnaies de la ville, liste toute provisoire du reste et sans doute très incomplète, mais qui remplira le but dans laquelle elle a

²⁵ Arrien, H. 21, 1; VII. 6, 4. Droysen, Gesch. d. Hell. i. 1, p. 369, 374-5; i. 2, p. 253.

été dressée, si elle engage les numismatistes à en combler les laounes et à y joindre les monnaies nouvelles ou méconnues qu'ils rencontreront, jusqu'à ce qu'un jour Tarse devienne le sujet d'uno monographie, comme M. Imhoof-Blumer en a écrit une sur Mallos.

Seconde Moitié du Sixième Siècle.

Le type d'Hercule se retrouve sur un statère de Mallos, do la coll. de Luynes, frappé en même temps que celui-ci. Ce type est copié d'après celui des monnaies d'or de Syracuse, émises sous Denys l'ancien, vers 400, et gravées par Cimon. En 387 Denys viut en aide aux Lacédémoniens et coutribua à faire conclure la paix d'Antalcidas. C'est bien on ce moment, ce me semble, que l'adoption des types du tyran sicilien doit avoir eu lieu en Cilicie, plutôt qu'en 393, quand Conon et Euagoras tentèrent en vain de gagner Denys à l'alliance d'Athènes.

le carré creux bien défini ou remplacé par un champ légèroment creux, on s'aperçoit bientôt que les mêmes types se répètent à intervalles, après avoir été remplacés par d'autres sujets qui, à leur tour, sent repris plus tard.

Ainsi le combat du roi centre le lion, sur le n. 4, ne diffère que peu de celui du n. 11; le cavalier des n. 6 et 7 se voit plus tard sur le n. 14.

Pourtant je n'ai pas réussi à arranger cette série de manière que les pièces aux mêmes types restassent réunies et quo les groupes ainsi formés se succédassent regulièrement. Teujours la dernière pièce d'un groupe était plus récente et de style moins archaïque que la plus ancienne du groupe suivant. Il a donc bien fallu entremêler les types. Le nombre des monnaios de Tarse, qui me sont connues, n'est probablement pas suffisant et la série n'est pas assez complète encore, pour tenter un classement définitif. Peut-être aussi semmes uous, ici aussi, en présence de plus d'une série d'émissions centemporaines et parallèles, frappées simultanément par le dynaste indigène et par la ville ou le satrape du roi de Perse.

Dans cette incertitude, je me bernerai à émettre une seule hypothèse. Il me semble que le personnage à cheval des n. 6 et 7—et peut-être aussi des n. 8 et 10—et qui sur le n. 7 paraît très âgé—est le rei Syenuesis, qui régnait sur la Cilicie, lors de l'expédition de Cyrus le jeune. D'après les renseignements que Xénephon et Diodore neus donnent sur sen compte, il paraît avoir été âgé en 401. Son règne se placerait donc entre 430 eu 420 et 400 ou 390, surtout s'il a été le petit-fils du roi Syennesis qu'Héredete, V. 118, mentionne en 490 et qui semble être identique avec le Syennesis, fils d'Oroméden, qu'Hérodete, VII. 98, nemme parmi les commandants de la flotte perse, en 480.

Je préférerais assigner au second Syennesis les années 430 à 400, afin d'obtenir un laps do temps suffisant pour y placer un successeur, antérieur à Tarcamos qui, comme il a été dit, paraît avoir été dynasto de 380 à 360 environ.

C'est à ce prédécesseur de Tarcamos que je voudrais donner les statères n. 14, sur lesquels le dynaste paraît joune, autant que les exemplaires que j'ai vus permettent d'on juger, ne trouvant aucun motif de les assigner à Tarcamos lui-même.

A la même époque reviennent encore les monnaies n. 11, 12, 13 et 15 et celles de la seconde série, p. 123, n. 1 et 2.

Espérons que do nouvelles recherches et la découverte do documents iuédits, permettront bientôt de dissiper quelque peu l'obscurité qui plane encore sur la numismatique de Tarse, mieux que je n'ai réussi à le faire dans cet essai.

J. P. Six.

AMSTERDAM, arril 1884.

PAPAL MEDALS OF THE FIFTEENTH CENTURY.

PAUL II. (PIETRO BARBO), 1464-71.

On the 31st of August, 1464, Cardinal Barho succeeded the astute Piccolomini, assuming the name Paul II, and in the following September he was crowned Pope with all the pomp he loved so well. The scion of a nohle house at Venice, that of the Condulmieri, young Pietro was through his mother the nephew of Eugenius IV; upon hearing of his uncle's election to the papal chair, he relinquished the gains of a Venetian trader for the gown ecclesiastic, and it cannot be considered that he made any sacrifice; it was no unusual occurrence in those times, hut at the early age of twenty-two the nephew found himself a Cardinal Deacon. His own election as Pope, twenty-four years later, was generally esteemed popular, for he had hy affahility of manner, and an unfeigned desire to please everyhody, gained beforetime everybody's suffrages. His roign, however, left no great mark hehind it; as Pope, he was more successful at home, when restricting himself to domestic politics, than in foreign enterprises. character, personally, the account which Platina, his contemporary, has handed down to us, must be received with some degree of reserve, hecause Platina suffered far too severely at Paul's hands, to permit us to regard that writer

as an impartial witness; while therefore we cannot afford to lose the historian's evidence, we must be prepared to make allowance for the possibility of his projudico.1

Paul possessed by nature gifts calculated in a great dogree to add grace to high position. In stature tall, with features accounted extremely handsome, people were impressed by his presence, just as their goodwill also was conciliated by his happy freedom of manner. Far from being parsimonious, as has been said, he was even lavish in expenditure, but then he was not less lavish in acts of charity. Although many were wishful to see the show of the Roman Court curtailed, he wished rather to increase it. Show gratified him. Ho liked to be seen and admired. The receptions which he accorded to the Emperor Frederick IV, and to Borso d'Este, Duke of Mantua and Ferrara, were really royal in their magnificence. It was he who assigned to the Cardinals the red "berretta;" in consistory he gave them seats raised above the rest; he forbad ecclesiastics other than cardinals to wear the "red hat;" and in sustentation of the importance of that dignity, he gave to the poorer members of the College, what is called to this day "il piatto;" while for himself, tho Pontiff, amongst other trappings of State, he provided a magnificent tiara, loaded with the most costly jewels. Grand in person, at a church ceremony he must have moved amidst them all, august as a second Aaron. How

^{1 &}quot;Erat enim Petrus Barbo natura blandus, arte humanus, ubi opus ast. Praeterca, cum precando, rogando, obtestando, quod vellet, consequi non posset, ut ad faciendam fidem precibus lacrymas adderat. Hanc ob rom Pius Pontifex hominem 'Marium pientissimam' appellari interdum per jocum solebat."—
Historia Platinas de Vitis Pontificum Romanorum. Coloniae Agrippinao. Anno MDCX.

could such a man be expected to starvo a pageant and curtail expense! Two spots darken Paul's reign: one, that really savage treatment which was dealt out to the historian Platina (who tells the story at full leagth), because Platina contested the Pope's right to abolish certain places about the Papal court, that the possessors had duly paid for; another was his persecution of "the Academy," a society of learned men, which having affected somewhat faatastically under the new influences, when (so to speak) Greece crossed over into Italy, classical names and modes, thereby strangely laid itself open to charges of heresy, and the Pope's displeasure.

After a reign of nearly seven years, Paul died suddenly in the night of July 25th, 1471, "nemine vidente," at the ago of fifty-three. He had been holding a Consistory, then dinner was served, and he appears to have eaten so freely of two very large melons, a fruit of which he was extremely fond, that it was thought ho died of the excess.²

The tomb creeted to his memory in St. Petor's, is admirably figured in Litta's "Famiglio Celebri Italiane," vol. ix; the work of Mino da Fiesole, it occupied two years in construction. Vasari says, "It was at that time considered the most magnificent and most richly decorated sepulchro that had ever been erected to any Pontiff whatever." I believe it is now to be seen in the old subterranean church of the Vaticaa.

Let me commend the memory of this Popo to the

² "Varia ciborum genera sibi apponi volebat, et pejora quaoque sempor degustabat. Clamabat intordum nisi quod expectebat ex sententià oi apposita fuisseut.... Quibus ex rebus, ortam crediderim apoplexiam illam, quà e vità sublatus est, nam duos pepones, et quidem praegrandes comederat, eo die quo sequente nocte mortuus est."—Plutinu.

Numismatic Society, not so much because he was a patron of art, but on account of his tasto for coins. "Vetustorum numismatum erat amator," writes Venuti; and according to M. Artaud ("Histoire des Sonverains Pontifes Romains"). Paul himself possessed a large number, and was able, without reading the inscription upon a coia, to tell in a moment to what personage it ought to he assigned. This taste had originated in that day with Cyriac of Ancona, a learned antiquary and numismstist. To gratify the taste artists were soon forthcoming. Vasari asserts that Vollano of Padua executed a medal of this pontiff, and M. Armand cites Raphael of Volterra to show that Cristofero Geremia of Mantua did so likewise. Among the authentic medals of Paul II that have come down to our time, which these may he, we are not able to determine; hut leaving this uncertain, I shall place those first in order which seem authentic, while the productions of a later day, or its reproductions, I shall place last. He struck two which hear date 1455, that is to say nino years before he became Pope.

- Obr.—PETRYS · BARBYS · VENETVS · CARDINA-LIS · S · MARCI. Bust of the cardinal to left, hareheaded. See Plate VII.
 - Rev.—HAS · AEDES · CONDIDIT · ANNO · CHRIS-TI · MCCCCLV. The palacs of Venice, huilt by Cardinal Barbo at Rome, topped with two square towers, one at each end. Size 9, by scale of Mionnet.³
- 2. Samo obverse.
 - Rev.—Shield of Arms of the Barbi family, azure, a lion rampant, or, over all, a bend, argent. Size 9.

³ Where practicable, the scale of Miennet is referred to. Bonanni sizes all medals alike, and therefore helps us less than he might have done by his engravings.

These types reappear when he became Pope, with later dates, and the necessary change from a cardinal's hat to a pope's tiara, and the crossed keys. A similar type appears also among the reproduced medals, of size 12 (No. 20, vol. ii. page 34. Armand). I consider that this reproduction of the type must he attributed to Paladino's hand, for the tiny asterisk which divides the words of the legend, in place of the ordinary point, allies it with other work of that medallist.

This representation of an edifice in Rome which has now disappeared is exceedingly interesting. Built for the Popc in 1455, hy Francesco dol Borgo di S. Sepolero, as existing documents show, and not, as Vasari said, hy Giuliano da Majano, it stood withdrawn from the Corso by hut a little space. Paul has been charged with robbing the Coliseum to get stones for this palace -well, there was precedent in plenty for such spoliation; hut a different story is told in Vasari, which is just as likely to be true. The towers at either end must have given the building the look of a feudal fortress. Within its walls Borso d'Este' was lodged, when he was received at Rome with extraordinary state. The palace was only pulled down in 1857, and then twenty of these medals, enclosed in an carthen vessel, were found in the cellar walls, both one type and the other being represented in the find. In connection with this discovery it is curious now to read Venuti's quotation describing the way in which Paul placed these same medals there in the foundations of the palace four hundred and two years hefore. "Numismatum amater, posuit, antiquos imitatus, in fundamentis numismata, quae cudi curaverat.

See No. 27, Mr. Keary's "Guide to Italian Medals."

Num. Chron. N.S. Vol. IV. Pt. VII.

cum propria offigie, et his verbis, Petrus Barbus, Venctus, Cardinalis Sancti Marci," &o.5

Closely connected with these "HAS AEDES" medals, is another, which is figured in the "Trésor de Numismatique," Plate II. 6, "Médailles des Papes." Presenting the same obverse, you have as a reverse.

S. ANNO · CHRISTI · MCCCCLXX · HAS · AEDES · CONDIDIT. The "tribuna" of the ancient Vaticaa basilica, with the words TRIBUNA · S · PETRI oa the exterior arch; in the exergue ROMA. Size 11.

This medal preserves for us a view of the old apsidal termination of the huilding, where stood the altar; that "tribuna," however, though oaly commenced under Nicolaus V by Rosselino, and completed by Paul II at his own charges in a costly way, was subsequently removed by Sixtus V (1587).

The medals which now follow seem allied to the foregoing, generally, in point of size and in rudeness of work. They are all casts.

- Obv.—PAVLVS · II · VENETVS · PONT · MAX. Bust of Paul to left, barebeaded, and in the stiff collared "pluviale."
 - Rev.—HANC · ARCEM · CONDIDIT · ANNO · CHRISTI
 · MCCCCLXV. The pontifical arms, with the tiara, bat without the keys.

Thus described in Venuti, of his size 4, which corresponds with 12 of Mionnet's scale, this reverse is figured in Bonanni, No. XVIII., but which "arx," or fortress,

^{6 &}quot;Nuaismata prope infinita ex auro, argento, acreo, sua imagino signata, sine ullo senatus consulto in fundamentis aodificiorum suorum more voterum collocabat."—l'latina.

is meant to be here represented is not clear. Paul built several; probably it is that at Todi (the ancient Umbrian town Tuder), on the read to Perugia which he built, as much a bridle for a eeditious people, as a protection for his frontier. Under the walls of another fortress, Arx Casciae, Venuti tells us a medal of this type was found in his time.

- Obr.—PAVLVS · II. · VENETVS · PONT · MAX. Bust to loft, barcheadod, pluvialo with ornamented collar (Arabesque work), and the "rationale," which was a kiad of large brooch, on broast.
 - Rev.—The Apostlee Paal and Poter sitting at the base of a rock, from it flows a stream, to which sheep flock to drink. Above is seen a Lamb with nimbus; the Lamb bolds a chalice. At either side a palm-tree. In exergue, PABVLVM SALVTIS. Size 12.

This is figured in Bonanni No. V., but an example ie to be seen in the British Museum collection, and I know another, in the possession of Dr. Frazer of Dublin.

The "pabulum" referred to is that religious aliment which the Pope supplied to the Syrian Maronites, whose Archbishop had sent to Rome for Roman guidance. In the palms on either side there is obvious allusion to some Eastern land.

- Obv.—PAVLVS · VENETVS · PONT · MAX. Tho bust to left, barebeaded, ae before.
 - Rev.—The Pope giving audience. Deosculation. In the oxergae, AVDIENTIA · PVBLICA · PONT · MAX. (British M.) Sizo between 11 and 12.

The figure kneeling and kiseing the Popo'e foot, accompanied by others also kneeling, has been the subject of much conjecture. Is it Borso d'Este? Vennti is

probably right in regarding it as no one person in particular, and seeing only in the reverse Paul's good-nature in giving audience to all comers. Platina, however, was ill-natured enough to question the advantage of these audiences: "His Holiness was too fond of hearing his own voice, to allow him to listen to any other." He also tells us of a strange habit which Paul had, even as Pope, of using the night as most people use the day, taking his meals, transacting business, giving these audiences, then—"nihil enim fore nisi noctu agebat."

- 7. Obv.—As in the other, according to Venuti.
 - Rev.—LAETITIA SCHOLASTICA. Female figure, resembling "Spes" on Roman coins, holding in right hand a flower; beside her stand two children. In the exsrgue, A.BO. [figured in "Trésor ds N., méd. coulées et ciselées en Italie aux XVe et XVIe Siècles"]. Sizs 12.

What the letters in the exergue may signify, has puzzled the learned. Bonanni conceived they stood for ACCADEMIA BONONIENSIS, and were to be understood to refer to certain privileges granted by tho Pope to that University. Venuti pertinently remarks on this, that no mention of such privileges has ever been made, and suggests, though with a "perhaps," that the name of the artist who struck the medal is to be sought in the A.BO. We must wait for the real explanation. Paul, by his persecution of the Academy at Rome, has been represented by writers of the time as unfriendly to learning; and Platina accuses him of telling people that reading and writing alone were sufficient for their children. "Romanos adhortabatur ne filios diutius in studiis literarum paterentur satis esse si legere et scribere didicissent."

8. Obr.—PAVLVS · SECVNDVS · PONT · MAX. Head bare, bust to left, as before.

Rev.—RILARITAS PVBLICA. Female figure standing, in her left hand a cornacopiæ, a palm-brauch in the right; at her feet two children. Size 9.

This medal is in the British Museum and also in my own collection; it will remind us by the legend, and by its rude imitation of classical coins, of the "Hilaritas Aug." a reverse of the Emperor Hadrian. There is yet another medal of Paul's bearing that legend, which, though rather larger in modulo, one might be tempted to put down as a veriety of the above type, from which it differs only in this, that the female figure stends alone. Venuti does so class it (Nos. IX. end X., p. 26), hut with a remark added, which heing acted on, et once seems to push his No. X. into a very different class. For, at the right foot of the female figure (see the engraving in Bonanni's plate, No. IX.) will be recognised the well-known ermorial badge of Dol Monte, Pope Julius III (1550), "tres montium ecervi." Whatever may he the obverse, I consider that the medal must be one of thet mongrel sort, which is composed by combining one Pope's obverse with another Popo's reverse. M. Armand places this No. X. of Venuti among the "Médailles de restitution" (vol. ii. p. 34), as wo might expect he would; and in my opinion its workmauship is not earlier than that of the seventeenth century, possibly belonging to the series of medals produced then hy Ferdinand St. Urbain, resembling the "Victrix easta Fides" of Nicolaus V end the "Omnes reges servicnt Ei," of Calixtus III, of which series we shall come across others presently.

Again there is another medal of Paul's, which I only know from Venuti's description, and Bonanni's ongraving,

No. XVII., about which I entertain suspicion, though I see M. Armand includes it in his list, No. 18, vol. ii., p. 33; for legend on the obverse it has "PAVLVS. VENETVS · PP · II · PO · MA · PACIS · FVN : " and for reverse "CONVIVIVM · PVB · ERGA · POPVLVM · ROMANVM," with two cornuacopies, and hetwixt them, the word ROMA. Though spurious, at all events this medal has distinct historical reference to one marked feature in Paul's reign, and may well follow the "Hilaritas" type. All three point to his fondness for giving public entertainments to the Romans, and the hilarity of the populace on being jovially treated. Venuti gives us a long extract from a life of the Pope, written hy Canesius, Bishop of Castro. of all which Paul did in this way, and Platina noting one festival in particular in the year 1466, has left on record how food was then cheapened; he also tells us of the races established under Paul's auspices, which were run along the Corso, from the arch of Domitian to the Palazzo di Venezia, races of all sorts, all sorts of people taking part in the fun, and laughing so as hardly to he ahlo to stand. "Curehant (sic), senes, adolescentes, juvenes, Judaei, ac seorsum, pastillis primo quidem pleni, quo tardiores in cursu essent. Currchant et equi, equae, asini, buhali (huffaloes, or, as somo say, antelopes) tauta cum omnium voluptate, ut omnes prae risu pedibus stare vix possent."

9. Obv.—PAVLO · VENETO · PAPE · II · ITALICE · PACIS · FVNDATORI · ROMA. The Pope, bareheaded, bust to right, in "pluviale."

Rev.—The Arms of the Pontiff (sometimes within a wreath), the tiara, and crossed Keys.

This medal is found in the British Museum and the South Kensington Museum collections. The unusual YOL, IV, THIRD SERIES.

fineness of the lettering is to be remarked. The shape is elliptic, and from point to point sizes a little over 13 of Mionnet's scalo. Paul early set himself to secure tho pacification of Italy, in order that war against the infidel might the better progress, so that the medal may be supposed to represent Romo'e recognition of his penceful zeal. The Republics of Venice and of Florence, the King of Naples, and Sforza, Duke of Milan, were the parties to be reconciled; accordingly in 1468, there was issued a papal edict, "Ut liherius justissimum hellum;" and on St. Mark's Day in that year, in the church of St. Mark's, at Rome, the Pontiff himself officiated at a solemn service, when the representatives of those Powers saluted with the kiss of poace; but it was short-lived joy, for new difficulties sprang up and choked all hopo of peace. Number V. in Venuti constitutes a variety of this type, which hardly seems entitled to separate place.

We come now to the most important medal of Paul's reign. M. Armand (vol. ii. pp. 33, 34), describes it as not cast, but struck, like a coin in feeble rolicf; in so describing it, M. Armand differs from all other writers; assigning it, however, to this Popo's time, not merely to the later portion of the fifteenth century.

10. Obv.—+ SACRVM · PVBLICVM · APOSTOLICVM · CONCISTORIVM · PAVLVS · VENETV · PP · II. The Pope enthroned, under a "haldacchino," or canopy, wearing his tiara; at either side, the cardinals; in front of the Pope, and facing him, ecclesiastics; facing the eyo, officials, three scated, two standing. Bohind all, the cardinals, and the people, whose heads alone are visible. Beneath all, the papal arms, tiara and crossed Keys. See Plate VII.

Rev.—+ IVSTVS · ES · DOMINE · ET · RECTVM · IVDICIVM · TVVM · MISERERE · NOSTRI · DO · MISERERE · NOSTRI. The Doom. Our Saviour, coming in Judgment, is eurroanded by the heavenly host; on either side, eaints and doctors of the Church. Two seraphs support a cross, on which is hung a crown of thorne. Beneath, an altar with the instruments of the Passion, the general Resurrection,—the Virgin and St. John the Baptist in adoration. Size 19. (Figured in Litta, vol. ix.; also in "Trésor N., Médailles des Papes.")

The medal is thus heavily crowded with detail. A coupling of NE in Domine, and of other letters, must not escape observation. The form of the baldacehino is in the etyle of the fifteenth century. Venuti mentions the medal as "very rare." Both he and Bonanni speak of it as cast. The best example of it known to me is in the British Museum; but there is another good one at South Kensington. Mr. R. C. Fisher, of Florence, possesses another, and a fourth, hy his courtesy, is now in my own cabinet. These are all in low relief, of hronze, but it must be noted how M. Armand speaks of having seen one in gold.

The event in Paul's reign, which has been thus grandly commemorated, was the holding of a sacred Consistory in Rome, 1466, at which ecclesiastical censures were fulminated against George Podiebrad, the Hussite King of Bohemia. By its ruling, King George'e subjects were absolved from their allegiance, hie kingdom granted to the King of Hungary, and a numerous army, drawn together hy profuse promising of Indulgences, marched against George, promptly to give effect to this sentence. The army was ignominiously defeated, the action of the Consistory was altogether haffled, and its anathema fell

harmlessly as "fulmen brutum." The subject of the medal's reverse, so chosen, had a reference, easily perceived, to the future Judgment, and such a choice of subject was quite in harmony with the feeling of the age.

- Obv.—PAVLVS · II · PONT · MAX. The saints Poter · and Paul.
 - Rev.—PAVLVS PP II. The Pope enthroned, a cardinal on either side, scated. Five figures kacoling before the throne. Deosculation. In the exergue, CONSISTORIVM PVBLICVM. Size 12.

This medal, somewhat resembling the "Audientia Publica," appears figured in Bonanni, No. VIII. Ho and Venuti agree in believing these five kneeling figures to represent an audience granted by the Pope to the children of Thomas Palaeologus, the brother of the last Emperor of the East. There were three, Andreas, Helena, and Zoe, or Sophia. There is some foundation for such an opinion, because Paul had received these princes graciously, and provided for them liberally.

- Ohr.—Head of Paul, obverse and roverse, to right. Tiara, ornamontal border in relief.
 - Rev.—PAVLO · VENETO · PAPE · II · ANNO PVB-LICATIONIS · IVBILAEI · — ROMA.

From motives of policy, not religion, several of Paul's predecessors had reduced the prescribed number of years, so as to produce a recurrence of the Jubilee more frequently, and their policy was acceptable to the people of Rome, for the jubilee with its crowd of pilgrims brought no small gain to traders. Paul himself lowered the number still further, to twenty-five years, perhaps in expectation of seeing the jubilee himself, but if so, expectation was vain, for life failed him before the day arrived.

This medal, elliptic in form, was struck on the publication of his Bull, in 1470, one year only hefore death surprised him. It is not noted in Bonanni, but an example occurs in the British Museum collection.

- 13. Obr.—PAVLVS · II. · VENETVS · PONT · MAX. Bust to right, the Pope bareheaded, wearing "pluviale," on the collar of which are worked the effigies of SS. Peter and Paul. On his breast the "rationale" (pectorale sacrum), on which are eeen displayed the Pope's arms.
 - Rev.—A wood, out of which rushes a wild hoar, which is being speared by a horseman; dogs join the chase, intermixed with wild animals, and a beater is seen in the distance; in the air hirds are flying. At the foot of trees on right, three minute letters—G·P·F (fecit); in the exergue, SOLVM·IN·FERAS·PIVS·BELLATUR·PASTOR·X. Size 12.

With this medal we pass right away from those which claim in any degree to belong to the workmanship of this period. M. Armand includes it in the "Médailles de restitution," hut he does not assign it to Paladine, as I conceive the letters and the character of its work entitle us to do. The small initial letters apparently he has not noted; but neither did Bonanni or Venuti. The work may he compared with No. 2, of Calixtus III, "Hoc vovi dee," where the letters, G. P., occur. This reverse contains allusion, not a far-fetched one, to the Pope's energetic action against the Bohemian Hussites, and in particular, against George Podicbrad their King, who naturally to Papal view, was "the wild hear out of the wood," of the Psalmist (lxxx. 13).

The portrait on the obverse of these medals is rather more pleasing than that seen on those medals which are

This roverse will be found to occur again under Pius III.

-Trésor de N. (Papes), Pl. III. 9.

actually contemporary. In the sixteenth century the processes of medallic art had improved, yet it is impossible for us to feel that this portrait can quite do justice to those good looks with which Paul is credited by those who knew his appearance and have described it. Their description conflicts with this retreating forchead, heavy nose, and lips somewhat disagreeably compressed. Paul, conscious of his fine appearance, and somewhat vain, is said on the day of his election to have occasioned some perplexity to the electing cardinals, hy announcing his intention to assume the name "Formosus," handsome. They overruled his wish; but had they not done so, he would not have been the first of the name, for at the close of the ninth century, one Formosus, Bishop of Porto, ruled the Church, as Pontiff.

- 14. Obv.—PAVLVS · II · VENETVS · PONT · MAX. Bast, as in others.

The person whose name appears on the reverse was the Pope's 'friend and chief physician. Gottifred built a

175

house for himself in the Piazza Navona, where the church of St. Agnese now stands, and when this huilding was sold hy his heirs and pulled down in the year 1692, one of these medals was discovered among the foundations. An example of it occurs in the British Museum collection.

SIXTUS IV. (FRANCIS DELLA ROVERE), 1471-84.

Francis Della Rovere, a Franciscan, General of the Order, Cardinal of St. Peter ad Vincula, a man learned, eloquent, and "hy nature made to govern," was the choice of the Conclave which met in Rome, August 9, 1471. His hirth was humble, but the fisherman's son of Savona experienced no difficulty, as he claimed to be descended from the noble family of Della Rovere, when once he was invested with the "Fisherman's Ring;" nor as Sixtus IV., does any one now dispute his claim to he remembered among "the great Popes" of the fifteenth century. Unhappily that greatness depended on his aggrandisement, and aggrandisement depended on the free play of the worse side of his nature. In that period, the papacy was often held hy family-founding occlesiastics, and Sixtus, though by no means the most successful of them, takes his place amongst them. He had nine nephews, and to their indulgent uncle each one of them lay under the most ample obligations.7 But let us remember that arrant nepotism did not scandalize the fifteenth century in any appreciable degree. When Lorenzo di Medici,8 "the wisest man in Italy," wrote to

^{7 &}quot;Sixtus eaim suorum amaatissimus ac indulgentissimus omnium jadicio est existimatas."—Onuphrio Panvinio.

8 Mr. Kcarv's "Guide to Italiaa Medals," p. 16, No. 84.

Innocent VIII, urging him to provide for his own, he certainly had some interest in the provision, but his remenstrance, founded on "zeal and duty," was only expressing that which men, inferior to Lorenzo, commonly felt.9 No one, however, even among friendly writers attempts now to extenuate the flagrant abuses of opportunity in that reign. M. Artaud writes kindly, but he has described Sixtus as "affligé si démesurément de la maladie du népotisme." That malady required for its indulgence two things, increased taxation, and acquisition hy war;10 and from war as a means of exalting the papacy and his own family, Sixtus drew much strength, often to the discomfiture of an enemy, but always to the discomfort of harried Italy. It is quite true he did some good there by putting down a number of petty usurpers, but then by the same stroke had he not doubled his own rovenuo? and further, if upon his accessioo, in the usual communications with the Princes of Europe, his proposals were eager for peace, so that these Princes in common with him might combine against the Turk, was it not also truc that by this time the Turk had become a piece on the chessboard of European politics, to be moved by the hand of a political Pope, who felt that he could take with it something better in exchange? Strango to say, when in 1480, by ancboring off Otranto, the fleet of Mahomet II threw Italy into consternation, it did more through terror for the pacification of Italy, than was done for it by Sixtus in the whole of his reign. His complicity with the Pazzi conspiracy at Florence in 1478, is a question which has often been debated. Too large for me to enter on in these

^{*} Ranke's "History of the Popes," vol. i., p. 83.

^{10 &}quot;Ad arma conversus, quibus maxime deditus fuit. Vectigalia nova iuvenit, vetera auxit."—Onuphrio Panrinio.

pages, it is enough to say that it has been decided differently by different writers, and as an incident of the time, is the subject of a well-known contemporary medal, by Antonio Pollajnolo, the seulptor.11

LORENZO AND GIULIANO DI MEDICI.

- Obv. An octagonal scaffolding representing the pillars of the Duomo; above, the bead of Lorenzo de Medici towards right; below, priests ministering at altar, and outside the enclosure, conspirators with swords drawn, and others, Lorenzo escaping. LAVREN-TIVS MEDICES, and, below the head, SALVS PVBLICA.

Let us turn to matter that has something in it which concerns us English. In the Archives at Venice there are sundry letters to this Pope from our king Edward IV.12 The first, dated August 10th, 1471, is merely a congratulation on the Pope's election; another, dated February 24th, 1476, is more interesting, because it touches on the state of things which was then springing up here in England, in reference to a reforming of the Church. "Shortly before we assumed this sceptre," writes the English King, "there arose a monstrous promoter of iniquity and perdition, one Reginald Pecock,13 of yore

" Calendar of State Papers and Mannscripts relating to English affairs in the Archives of Venice," vol. i., 1864.

¹³ Peccek, in the year 1457, had been cited before Kemp, Archbisbop of Canterbury, for beresy, and bad to read his recantation at Lambeth, and at Paul's Cross. He died a prisoner at Thorney Abbay.

considered Bishop of Chichester; the writings and treatises composed by him, multiplied in such wise that not only the laity, but churchmen and scholastic graduates searcely studied anything else. We heseeth you then to despatch Apostolic letters, hy whose authority proceedings may be instituted. Given at our Castle of Windsor, in the year of grace, according to English reckening, 1475. Signed, your Holiness' most devoted son, Edward, King of England and France."

Though possessing but little knowledge of art, as a story in Vasari shows,14 Sixtus patronized art as a Popo ought to do. With the help of the architect. Baechio Pintelli, he built the Sistine chapel in the Vatican, and a palace in the Borgo Vecchio. The painter Perugino was by him invited to Rome, "to his great glory," says Vasari. So also was Ghirlandajo. More than this, he was munificent in relief of distress, in the repair of churches, in the founding of the only Foundling Hospital at Rome, in his enrichment of the treasures of the Vatican library. May not these things count as some "set-off" against the offences of his strong nature, ambitious and unscrupulous as it was? His reign of thirteen years came to its close quickly. In 1484 war was waged against the Venetians. The Pope, the King of Naples. the Florentines, and Lewis Sforza were apparently the closest allies, and were triumphing, when suddenly Sixtus was disconcerted by finding that peace had been made by them-mado without him, nay, in distrust of him. so the diarist records in conclusion, "on the evening of the 10th of August, he was seen at Vespers with his hands clasped together, and very sad;" at once he took

¹⁴ Life of Cosimo Roselli.

to his bed, and on the 12th he died. When the Cardinals assembled to choose a successor (wrote the contemporary conclavist), "all spoke ill of him, nor was there any man to say a word in his favour, save a certain Franciscan friar. Many verses wore made against him, perhaps hecause he had always been the enemy of literary men, and of all who lived good lives." 15

Vindictive Roman bile could always find an outlet in the carmen mordax, yet the bite of the two couplets which I quote is not actually venomous, like that of others which might be quoted:

"Die unds, Alecto, pax ista refulsit, et unde Tum subito reticeut praelia !--Sixtus obit."

Tell us, Alecto—peaceful heams are shed, Wheuce comes this hush in war?—Sixtus is dead.

"Non potuit sacrum vis ulla extinguere Sixtum, Audito tandem nomine Pacis—obit."

To take his life, her atmost Warfare tries, The name of Peace is heard, and Sixtus—dies.

From M. Armand's account of the medals of Pictro da Milano 16 (1461—85), it would appear that one of Sixtus by that artist is unknown now, but it was equally unknown to Venati and Bonanni. We possess, however, certain authentic medals of Sixtas as Pope, which were known to both those writers.

the tiara on his head. At B. Museum, and at S. Kensington. Size 12. Armand, i., 62, 1., figured in Trésor de N. (Italie). Bonanni, Pl. XXIV., 3.

The Popo's feeling towards these Saints was well known. He regarded St. Francis as his patron. This medal may be considered a "coronation medal," the prototype of others which occur in subsequent reigns. The day of his coronation was very nearly becoming the day of his death, for through the officious conduct of the pontifical guard, a popular tumult rose up as the Pope passed along the crowded streets from the Vatican to St. John's Lateran, stones were thrown, and he was for a few moments in serious danger. On the removal in 1635, of the finely executed sepulchral monument, received by Antonio Pollajuolo, to the chapel of the Sacrament, one of these medals was found "in cadavere."

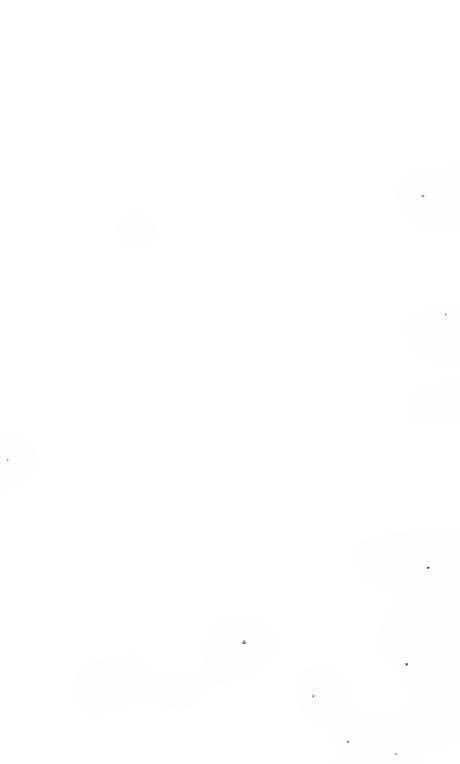

- 2. Obv.—SIXTVS: IllI r PONT MAX SACRICVLTOR.

The ruined bridge over the Tiber, called hy the ancients "Pons Janiculensis," was restored by Bacchio Pintelli for this Pope in preparation for the jubilee, and from that time, indeed by his direction, it was known as the

¹⁷ See engraving "Famiglie Celebri Italiane." Del Conte Pompeo Litta. Vol. ix.

PAPAL MEDALS.

"Ponte Sisto." "Pontem voterem Janiculonsem . . . a fundamentis magnà curà et impensà ex Tibertino lapide restituit, suoque de nomine Xystum vocari jussit, opus sanè omni antiquo principe dignum." (Onuphrio Panvinio.) The foundations of the new bridge were laid in May, 1483—and under the stone were thrown medals of . this type. The legend on the reverse points to a carefulness on the Pope's part to see to all such public improvements; and the following quotation in Venuti, from Raphael of Volaterra, sustains the legend-even Augustus had found Rome of brick, and made it marble, so Sixtus found it clay and turned it into brick. "Templa insuper vetustate obsita, omnia restituit, Romam denique ex luteă lateritiam fecit, sicut olim Augustus ex lateritiă marmorcam fecerat." It will be seen that allusion is made to these restorations in the legends of other medals.

This medal is figured in Dr. Friedlander's "Italian Medals of the Fifteenth Century," Pl. XVII., also in the Trésor de Numismatique (Médailles des Papes), Pl. III., 3. M. Armand describes it under the name of the medallist, Camelio, vol. i. p. 116—9, and draws attention to its remarkable resemblance to the "Audientia Publica" of Paul II, without, however, asserting more than that medal was perhaps the model for this. Camelio was a Venetian, engraver for the Mint at Venice, 1484—1523.

The question raised about the figures kneeling at their audience with the Pope is answered by supposing they represent the royal personages who were received at Rome in the time of Sixtue. Christian, King of Denmark, Sweden, and Norway, 18 the King of Bosnia, Charlotte, Queen of Cyprus, Ferdinand, Kiug of Naples, and his eldest son, the Duke of Calabria.

us to follow Dr. Friedlaender in ascribing this medal of Sixtus to Guazzalotti's hand. The legend on reverse is a quotation from the Æncid, vi. 854, the words of "Pater Anchises;" they were taken to set forth here the Pope's energy in repelling the Turkish host from Italy, or else his action in dealing with those associated together against him after the Pazzi conspiracy, and his constancy therein. They were again used in the following century on a medal of Sigismund II, King of Poland, by Patavino (Armand, i. 140—2), but to no one could they be more pertinently applied than to Sixtus. At Sir William F. Douglas's sale in May, 1883, a medal of this type, "very fine," sold for £10.

Rev.—IVL CARD NEPOS IN OSTIO TIBERINO.
View of the fortified towers of Ostia. Sizs 12.

In the British Museum and in my own collection. It is figured Trésor de N. (Italie), Pl. XXIV., No. 4, and described hy Armand, ii. 62—4. In point of workmanship it is rudeness itself; the letters expand a little at the extremities. It was struck by the "Cardinal nephew" Julius (afterwards Pope Julius II), to acknowledge his uncle's readiness in assisting him in war by the construction of this fortress at Ostia, of which place the "Cardinal nephew" was the eastellan.²⁰

Vasari informs us how Giuliano Sangallo, the architect, was employed there for two years, Julius "eausing him

²⁰ In the South Kensington collection there is a medal of Julius as Bishop of Ostia, IVIJANVS · EPS · OSTIEN · CAR · S · P · AD VINCYLA. Fortifications of Ostia.

to do everything which his art could accomplish for the improvement of the place." The architect was no novice, so his work stands there to this day, consisting of massive semicircular towers, united hy a curtain, and defended by a ditch; upon its gates remain the arms of the Della Rovere.

Here I conceive we lose sight of the medals which actually belong to this Pope's reign, though it will not be easy to say how much later than his reign is that which now follows. While Venuti classes it among the "Numismata noviter cusa," it is carlier than Paladino's medals (figured in Bonauni, 1699) which come last.

- 6. Obv.—SIXTVS · IIII · PON · M · ANO · IVBILEI.
 Bust of Pops to last, tiara, &c.
 - Rev.—GLORIOSA · DICTA · SVNT · DE · TE · CIVI-TAS · DEI. [Psalm lxxxvii. 3.] The Pops, silver hammsr in hand, accompanied by three attendants, is striking the "Holy Door." Size 12.

This appears figured Trésor de N. (Italie), Pl. XXIV., No. 5. The workmanship is peculiar and coarse, as also is the lettering. The representation of the ceremony differs in various dotails from the types adopted later. The medal is described in Armand, vol. ii., 62, 2, and is placed under "Rome, et les Etats Romains." Though the earliest of this class of Jubilee medals, even Bonanni is the one to say it cannot be of the time of Sixtus, because the coremony it commemorates was instituted later; it helongs to the sixteenth century. We come now to some medals of Paladino's.

Ohr.—SIXTVS · IIII · PONT · MAX. Bust to left.
 The Pope wears tiara, &c.

Rev.—The Pope, attended by cross bearer and many mitred bishops, is bending forward, breaking through the masonry which has closed the doorway. Above his head, a cloud, from which rays of light shine down into the opening; cherubim are seen above it. On the left, a kneeling crowd. In the exergue, CITA · APERITIO · BREVES · ÆTERNAT · DIES. On the sill of the door, G · PALADINO. Size 12.

Figured T. de N. ("Papes") and in other books; described in Armand, vol. i. 297, 17. I am indebted to Artaud for an explanation of the legend in the exergue, which may be thus translated: "An expeditious opening lengthens short days." At the first institution of the ceremony, the pontiff's labour, a hammering down of the masonry piecemeal, was very tedious. Later on, it came to be exchanged for a simple plan, arranged overnight, by which almost at a blow the stones fell down, and without more ado the Pope entered the Basilica. This reverse appears again on medals of Alexander VI and Clement VII.

G. Paladino, whose signature appears here, is said to have worked about the close of the sixteenth century, and to have produced a series of papal medals of the fifteenth century, just as Giambattista Pozzi produced a series from St. Peter to Alexander V (1410). Dr. Friedlaender, in a paper written on the works of Andreas Guazzalotti, as long ago as 1857, calls attention to another difference in the medals of Pozzi and Paladino, namely this, that while Pozzi gave portraits of his Popes which are purely imaginary, Paladino copied for the most part from originals which may be depended on. I have not come upon any mention of Paladino in the older writers. Molinet. Bonanni, and even the more careful Venuti, appear never to have observed his signatures, for other medals were signed with his initials, and others again, without any signature at all, must he attributed to him; but I agree with the reviewer of M. Armand's book ("Numismatic Chronicle," Third Series, No. II. 1883), in believing that a further acquaintance with these "Médailles de restitution" will lead us to eject some which now stand in M. Armand's list of the Paladino series, for they lack the characteristic marks of his hand. This I have already ventured to do with the "Redde cuique suum" of Eugenius IV, as well as with the "Claves regni celorum." If one cannot say who did produce these, we can say that it was not Paladino. The following is a complete list of those medals which are signed by him, so far as I know them.

	Legends of Reverse.	Signature.	On Medals of Popes.
	Cita aperitio aeternat breves dies	G. PALADINO	Sixtus IV. Alexaader VI. Clemeat VII.
2.	Solum in feras Pias bellatur pastor	G. P. F(ecit) .	Paul IL Pius III. (T.N. "Papes")
	Hoc vovi Deo	G. P	Calixtus III. Pius V.
4.	Ne maltorum sabruatur secaritas	G. P	Calixtus III.
5.	Ecce sic benedicetur homo.	G. P	Innocent VIII.
	Sub ambra alarum tuarum.	G. P	Pius III.

If I were asked what is the feature which characterizes Paladiae's work, I should say, it is its staring want of proportion, whenever he essays to delineate the human form, or the forms of animals. It amounts to the grotesque, and stamps him as the "inferior artist" he is called hy Dr. Friedlaender. Contrast the height of the

portal, on this medal of Sixtus, with the height of the bending Pope; observe the ill proportions of the ox in the Borgia shield, the size of the horse's head in the "Solum in fcras" mcdal, of the huge hands and heads in those of Ianocent VIII and Pius III, and the case is clear.

- 8. Obv. SIXTVS · IIII · PONT · MAX. Bust to left, tiara, and, on the "rationale," the Della Rovere arms, an oak-tree eradicated.
 - Rev .- ANNO · IVBIL · ALMA · ROMA. "The Holy Door; " above, an effulgence of light from behind a clond. Beneath, the date 1475, evidently altered from 1450, at some expense of the surface. The numerals are in relief, and older in style than the work they date. Size 12.

This reverse, mutatis mutandis, is a fac-simile of the reverse of Nicolaus V, No. 4. Four Basilicas in Rome have a "Porta Santa;" but this, a door in St. Peter's, on the right of the great central door, which is marked by a cross in the middle, and usually walled up, is the "Porta Santa" broken open by the Pope in person on the Christmas Eve of a Jubilee year. The Pope begins the ccremony by striking the door three times with a silver hammer, and it is constructed so as to fall almost at the stroke. The ceremony was not instituted until the reign of Alexander VI, at the beginning of the sixteenth century. An interesting account of it, as seen by an eycwitness, is to be found in a letter from J. Jackson to his uncle, Samuel Pepys, dated Rome, Dec. 25, 1699.21

9. Obv. -- SIXTVS · HIII · PONT · MAX. " Effigies cam tiară et pluviale,"—Venuti.

Another of the Jubilee medale. My description is taken from Venuti's and from Bonanni's engraving. I am unable to say more than that M. Armand places this under Paladino's name.

- 10. Obv.—SIXTVS · IIII · PONT · MAX. Bust to left, tiara, &c.
 - Rev.—FRAN · DE · LA · ROVERE · DI · SAVONA · A · MCDLXXI. The arms of the Della Rovere, azure, an oak, eradicated, and with the branches interlaced, or, surmonnted by tiara and crossed Keys. Size 12. Engraved in Litta; figured T.deN. ("Papes"), Pl. III. 1, and placed by M. Armand among the resterations of Paladino.
- 11. Obv.—SIXTVS · IIII · PONT · MAX. Buet to left, tiara, &c., as on the last.
 - Rev.—ETSI · ANNOSA · GERMINAT. The Della Rovere arms, as upon the preceding medal, eurmounted with the tiara and crossed Keys. Size 12.

This reveree appears also among the reverses of Julius II, with an application in the words of the legend which here of course is wanting. M. Armand apparently has not seen this medal; had he seen it, I think he would have classed it also among the restorations of Paladino.

ASSHETON POWNALL.

VI.

NOTICE OF A COLLECTION OF OROATS OF ROBERT III. OF SCOTLAND (1390—1406).

THE coins which I forwarded for the inspection of the Numismatic Society were drawn from various sources, and were hrought together into one collection with the view of affording a representative, although not exhaustive, exhibition of the numerous varieties of types and legends.

Accordingly in the following catalogue care has been taken to set forth correctly the legends, the symbols or marks dividing the words of these legends, and the types of the various coins, so as in this way to indicate even the slightest differences which occur between the pieces.

Naturally, the examples from the metropolitan mint, Edinhurgh, are most numerous, and present no less than sixty-three varieties, and include among them the only half-groat in the collection, a rare and unpublished coin. The coins of Perth are well represented, and number twenty varieties. It is supposed that the Perth mint was, in the latter part of the reign and during troublous times, transferred to Dumbarton, where a light coinage was struck; but no groats of this mint are available for exhibition at present. The groats of Aherdeen number no less than thirteen, and afford as many fine varieties of this rare and scarce mintage.

An attempt has been made to catalogue the coins in what is thought to have been the chronological order of their issue, but in the absence of contemporary records of the coinage this arrangement can at the best be only problematical.

THOMAS MACKENZIE.

DORNOCH, 16th February, 1884.

MISCELLANEA.

Coins of the Commonwealth .- Tho late Rev. Mr. Chrietmas, in hie article on "English and Aaglo-Gallic Coine," Num. Chron., N.S. vol. i., 28, steted that the Commonwealth half-crowu of 1655 was then in the collection of Mr. Wigan, as also wae the chilling of 1657, and he further remarked that of the latter, Mr. Lindeay had another specimen. I exhibit the two coins referred to ae having heen in the possession of Mr. Wigau, both of which are now in my collection. I also exhibit another ehilling of 1657, which I acquired come little time cince, and which ie undonhtedly genuine. Mr. Wigan'e coin in its general appearance differs comewhat from mine, but after very careful examination I am of opinion that that eleo is genuine. There is no chilling of this rare date in the National collection, and in the last edition of Hawkine (p. 372) it is etated that this piece and the sixpence of 1659 rest upon the anthority of Mr. Tutet, and thet an occurate exemination of the pieces mentioned would probably lead to the detection of some frand like that upon the Muceum chilling of 1659, and upon the sixpeace of 1650. In the same work it is stated later on that a chilling of 1657 was eaid by Mr. Tutet to he in the Hunter collection. I have not seen this coin, but heving regard to the piecee now exhibited, I of course differ from the learned anthor in his assumption that ehillinge were not coined in the year 1657. With respect to the half-crown of 1655, the one in my possession is certainly not oue of Stapley's forgeries referred to in the Public Intelligencer of the 26th October, 1655, an extract from which was communicated by Sir Henry Ellis to this Society in 1837, and which I now reproduce. "Thie Abraham Stapley is a false coiner of money, for in his house at Deptford were found eeveral false coining irone for half-crowne, and false halfcrowns coined with the date 1655. And this ie to give notice to all persons whatsoever that shall receive any of the said money of Stapley'e dated 1655, there being none of that date in hie Highnees'e mint coined to this day, the 26th of Octoher." Sir Henry Ellie etated his belief that none were coincd eince, as he had inquired for each in numeroue cahinets, and alwaye without success. I have seen one of Stapley's

forgeries; it is of hase metal covered with silver plating, and the workmanship also would have led the veriest tyro to a correct conclusion with regard to its want of anthenticity. My coin is I believe a genuine one, and its weight and other incidents confirm this. It may be true that no half-crowns were coined up to the end of October, 1655, as stated in the Public Intelligencer, but there is nothing to show that they were not coined afterwards, and the extreme rarity and, so far as I know at present, uniqueness of this coin would proceed from the fact that within the two months remaining of that year very few would of necessity have been struck or issued.

H. MONTAGU.

NOTICES OF RECENT NUMISMATIC PUBLICATIONS.

The Revue Numismatique, 3rd ser., tom. i., 3rd and 4th parts, contain the following articles:—

J. P. Six. On the Classification of the coins of Cyprus. A most important and highly suggestive article comprising all that is known of the interesting series of coins belonging to the nine ancient cities of Cyprua: (i.) Salamis, (ii.) Citium with Idalium, (iii.) Marium, (iv.) Amathus, (v.) Curium, (vi.) Paphos, (vii.) Soli, (viii.) Lapethus, and (ix.) Ceryneia. When we call to mind how few years have elapsed since the late George Smith of the British Museum discovered the key to the interpretation of the them mysterious Cypriote characters, which had haffled the ingeneity of students for more than twenty years, there is good reason to congratulate enrolves on the progress which has been made in this branch of numismatics. M. Six's latest contribution will be indispensable to all future workers in this field.

A. Boutkowski. Inedited Autonomous and Imperial Greek coins.

E. Muret. Coins of Lydia. In this paper the writer has undertaken to class the coins of the Imperial period, but without the head of the Emperor, to the various reigns to which they belong. This, we need hardly say, is only possible in those cases where the same magistrate's name occurs, both on so-called autonomous and on Imperial coins. There remain also a considerable number of Lydian coins hearing magistrates' names which are anterior to the age of Angustus. These it is quite impossible to classify in exact chronological order.

E. Babelon. Letter to Dr. J. Friedlaender on a Roman Republican Semis, attributed by Mommson, *Hist. Mon. Rom.*, vol. ii. p. 319, to the moneyer M. Ahurius Geminus, B.C. 134—114. This coin according to M. Babelon is in reality a coin of M. Fahrinius, of which the inscription M. FABRI NI has been altered hy a modern forger to M. ABYRI NI. Dr. Friedlaender, in his reply to M. Babolon, stated that he saw no reason to doubt the authenticity of the inscription on the specimen in the Berlin Museum.

M. Deloche. On unpublished Merovingian coins of Angou-

lême.

E. Gariel. On Carlovingian Coins,

L. Blancard. On the coins called Liliati or Caroloni (Gillats or Carlins) of the Angevin kings of Naples, first issued in a.D. 1302.

G. Soblumberger. On Byzantine Seals.

J. Ronyer. A jeton of Jacques Charmonle, "Changeur dn Trésor," temp. Louis XII. and Francis I.

The Zeitschrift für Numismatik, hand xi., heft iii., contains the following articles:—

Th. Mommsen. Restitution to Berytus in Phoenicia of a coin attributed by Eckhel, Mionnet, and Do la Saussaye (after Vaillant) to Ruscino in Gallia Narhonensis.

H. Jackel. On the Frisian wede, a woollen garment, as a

medium of exchange, equivalent to twelve silver pennics.

M. Bahrfeldt. On the Masera find of Roman Republican denarii.

F. Bardt. On the Gross-Briesen Find of Bracteates.

J. Friedlander. On the Medals of the Florentine Artist Nicolaus Forzorius.

Geschichte des aelteren römischen Münzwesens bis eirea 200 vor Christi, from the posthumous papers of Dr. Karl Samwer, edited hy M. Bahrfeldt. Wien, 1883.

This is a treatise which cannot fail to awaken the interest of all students of the growth and development of the early Roman coinage. In the conclusions at which the authors have arrived, after mature study of a mass of material which has never yet heen placed at the disposal of metrologists, they have been led to differ essentially not only from all the older writers on the same subject, but from no less an authority than Mommson. The commencement of the Roman coinage on the Lihral system is fixed by Mommson as having taken place in the time of the Decemvirs n.c. 451. Bahrfeldt and Samwer reject the evidence addneed by Mommson in favour of so early a date, and chiefly

en the ground of the late style of the head of Janus, and of the prow on the earliest asses, place the commencement of the Roman aes grave in the first half of the fourth century B.o. The writers also show most satisfactorily that the earliest asses were de facto as well as de jure Libral, consisting of 12 ounces and net of 10, as Mommsen supposed, to whom the heavier specimens were unknown. This original As of 12 ounces sank, however, in the course of a very few years to about 10 onnces. at which stage it remained nearly stationary down to about B.o. 310, as we infer from the fact that the Roman colony of Luceria, founded B.C. 314, coined its money on the 10-onnce standard. Between n.o. 310 and 290 the weight of the As sank to shout 71 ounces, and hetween B.o. 290 and 268, during the wars with the Etruscans, the South Italians, and Pyrrhus, it fell still lowor, viz., to less than 3 onness. The writers show that throughout the whole of this period the reduction was a gradual one, and that the semi-libral and quadrantal reductions inferred by d'Ailly and de Salis had no legal status. The first real legal reduction took place in n.o. 268, when the Roman coinage was reorganized and the denarins of 72 to the lb. weight of silver was first issued. The reduction in the weight of the As then legally sffirmed was according to our anthors Sextantal, and not, as Mommson supposed, Triental, the denarius being equivalent to 10 asses of 2 ounces each, and the proportionate value of silver to copper as 1.120. We shall be interested to learn whether Prof. Mommson will have anything to say in reply to tho weighty arguments adduced by Bahrfeldt on this subject. Between n.o. 268 nnd 241 Bahrfeldt gives lists of silver denarii and Sextantal bronze coins bearing identical moneyere' symbols. Again, M. Bahrfeldt differs from Memmsen with respect to the date of the reduction in the weight of the denaring from 70 to 60 grs., in other words from to to the lb. This reduction Memmsen makes contemporary with the uncial reduction of the As n.o. 217. Bahrfeldt places it as carly as B.c. 241.

In n.e. 217 the As was legally reduced to the weight of 1 ounce, and the denarius was tariffed at 16 of these uncial asses, the proportionate value of silver to copper being now fixed at 1.112. The above brief notice of Mossrs. Samwer and Bahrfeldt's interesting treatise will be sufficient to point out that numerous and important questions have been again raised, which since the appearance of Mommsen's standard work have been generally regarded as finally disposed of. We commend the book to the careful study of the metrologist, but we doubt whether the last word has yet been said on this obscure and intricate chapter of Roman numisuantics.

B. V. H.

VII.

THE COINS OF THE AXUMITE DYNASTY.

So little is known of the early annals of Eastern Ethiopia, that the interest aroused by the few relics of the coinage of its rulers that have reached our times belongs rather to the region of archæology in general than to the more limited domain of numismatics. So small in extent is the ground covered by the specimens which have of late years been discovered, that it has been difficult, if not impossible, to treat the monetary system of ancient Ahyssinia as a subject of separate study. It has been necessary to regard each coin, as from time to time specimens have come to light, as a gloss, so to speak, upon the meagre records of the Abyssinian chroniclers, rather than as a part of a consistent whole. It cannot be said that hitherto very fruitful results have followed from the researches of the archeologists who have worked upon this difficult subject. cannot be a matter for surprise when we reflect upon, not only the paucity of the materials at command, but also the rude and imperfect character of the legends, which are nearly the only means of interpreting the history of the These inscriptions are couched in a Græco-Coptic character of a dobased type, and are executed by artists who in almost overy case must have been ignorant of the Greek language, and who worked through the eye alone.

Of the gold coins known, I think I am right in saying that there is but one which hears a fairly-written, intelligibla Greek inscription (Pl. X. No. 1). The others are either misspelt, or fail in conveying an intelligible meaning to the understanding. In describing the coins figured in Plate X., the majority of which are now published for tha first tima, I make no pretension to having reached a more advanced stage than my predecessors. There are difficulties involved in the study of these coins which I feel myself unable to conquer, but which I do not helieve are insurmountable. As materials multiply, I am convinced that a satisfactory solution of the enigmas that now puzzle us will be arrived at, and it is rather with the view of assisting in the attainment of this end hy hringing new acquisitions to the notice of archæologists than of offering suggestions or explanations myself, that I venture to publish tha coins in question. I confine myself to thesa which bear Greek inscriptions, partly because those with Ethiopic legends bolong to a later and distinct series, and partly because no recent discoveries of coins of this class hava been reported.

The first to make a serious study of the Axumite coins was the late M. Adrien de Longpérier, who in the Revue Numismatique for 1868 published a careful description of the coins known up to that date. In the elucidation of the legends he was assisted by M. Antoina d'Abbadie, who regarded the words of which they were composed as epringing from a Kamite sourca, that is to say, the languaga spoken by the Agao, or aboriginal inhabitants of Abyssinia. This hypothesis has not received the support of subsequent writers on the subject, nor does it seem susceptible of bearing serious examination. Although the Axumite sovereigns preferred to employ the Greek character for the

legends of their coins, thore can be little doubt that the language of the court, if not of the people in general, was Ethiopic, which was closely allied to the Himyaritic of the opposite coast of South Arabia, if not originally identical with it. M. Longpérier was followed in his researches by Dr. Dillmann and M. Joseph Halévy, both of whom contributed by some valuable suggestions to our knowledge of these coins. The net results of their investigations have been summed up in an extremely able manner by M. E. Drouin in the Revue Archéologique for 1882. Although I do not concur in all of M. Drouin's conclusions, I cannot refrain from testifying to the value of his work, which has done much to smooth the path of subsequent inquirers.

The gold coins of this series belong to two classes, one consisting of pieces struck anterior to the introduction of Christianity into Ethiopia, and the other of those struck subsequent to that event. They are all of one general type, which, in order to obviate the necessity of repetition in describing the coins separately, I shall detail here. The obverse bears the bust of the king turned to the right, encircled by two ears of a grain resembling barley. On the head is a radiated crown with four points, apparently placed above a fillet, which is tied behind, and in the hand is a sword or seeptre, pointing to the right. The bust is draped, and the figure in coins belonging to the post-Christian era is generally surrounded by a dotted or plain circle. The reverse bears a smaller bust, also turned to the right and encircled by two ears of barley.

¹ Die Aufänge Axumitisch. Reiches, 4to., 1879, pp. 226 sqq.
² Mělanges d'épigraphie sémitique, 1874, pp. 126—46.

³ Les listes royales éthiopiennes et leur autorité historique, 1882.

On the head is a round tiara or diadem tied hebind, and apparently with an ornament in front, and in the hand is a hranch of olive or some other hacciferous plant. The præ-Christian coins hear upon their margins the well-known symbol of a crescent and globe; the post-Christian replace this hy crosses, which are generally placed at the four cardinal points, and interrupt the legend in an arhitrary way, thus adding to the inherent difficulties of its interpretation.

The earliest coin of which specimens are known bears the following inscriptions:—

Obr.—ΑΦΙΛΑΌ BACIΛΕΥΌ.

Æer.—Α≨WMITWN ΒΙΟΙΔΙΜΗΛΗ.

Several gold specimens of this type have been figured and described,4 and the British Museum also possesses a copper coin which has not hitherto been published (Pl. X. No. 13), and which varies from the others in the fact of the head on the obverse being en face, instead of in profile. The inscription, which is perfectly legible, does not differ from that in the gold specimens, and it also bears tho crescent and globe in both margins. The name of the king has been variously read as Aphilas, Aphidas, Aridas. and Aqilas. A careful examination of the coins will, I think, substantiate the first of these readings, but this does not remove the difficulty of identifying the monarch. In the lists of the Ethiopian kings we find in Period I., List A, No. 16, a Filya, AAP: and in B, No. 20, a Sufelya, has: both of whom lived in pra-Christian times, but at a date too remote for the style of the coin. M. Halévy suggests the Semitic root han: hafela,

⁴ Dronin, op. cit., Pl. XX., Nos. 1, 2, 3.

which in the form is still employed in Arabic in the sense of congregatus fuit populus. I profer to look on the name as the Greek form of the Ethiopic Af-ilah, the mouth of Ilah, which in the analogous forms of Sa'd-ilah, or Sa'd-ilat, &o., is often met with in Himyaritic. A similar compound is used to this day in Abyssinia in the honorary title of Afa-negûs, or mouth of the king, a royal officer whose husiness it is to communicate between the king and his subjects.⁵

The inscription on the roverso bas in vain exercised the ingenuity of arcbeologists. It bas not yet been settled whether it applies to the smaller crownless head or not, or whether the head in question belongs to a Cæsar or presumptive successor, to a vicercy of Arabia, or even to a royal consort. The sword in the king's hand would seem to connote the military functions of the Hakim, or head of the State. Does the branch in the hand of the figure of the reverso indicate the more peaceful duties of a civil officer? It is difficult to answer the question until we know more of the Etbiopic system of government than can be gleaned from the bare annals of the Abyssinian historians. It may, however, be remarked that the two heads figure in the same manner on the Sabran or Himyaritic coinage, and that, as will be shown farther on, there are good grounds for supposing that the smaller head represents the beir to the kingdom, and ex-officio viceroy of el-Yemen.

³ I follow Dilimann's classification of the lists of the Ethiopian kings. The first period extends from the earliest times to . Bāzēn, in whose reign Christ is said to have been horn; the second to Ela-Abreha, under whom Christianity was introduced into Abyssinia; and the third to the accession of the Zagé dynasty and the temporary extinction of the Salomonians.

The legend BICIAIMHAH has been read by Rnppell as an abbreviation or corruption of BACIAEYC AIMIAN, Dimian having heen takeu as the name of a viceroy of el-Yemen under the Axumite sovereigns. This hypothesis, although it has received the support of competent archæologists, does not, in view of the very clear epigraphy of the inscription, and the historical difficulties involved in its acceptance, seem to me to he tenable. M. Halévy is probably nearer the truth when he recognises an Ethiopie phrase in BICIAIMHAH. I heliove mysolf that it is a territorial surname of the sovereign, formed in the same mannor as the lagabs of so many of the Himyaritic monarchs. BICI is, as M. Halévy has pointed out, the Ethiopio -Ωλή.: a man, and is equivalent to the Himyaritie H or the Arabio . In the Axum inscriptions, the King Ela-'Amcdâ is styled Beësè Halên, a phrase which has been interpreted by Dillmann as equivalent to φιλέλλην, a common surname of the Græcized sovereigns of Asia. I would, however, prefer to recognise in Halên, cho4: a local name, possibly the ancieut Κολόη of the Periplus, the modern Halai. In the same manner, the royal names compounded with Beësè in the Ahyssiuian lists, such as Beësè Bâzên, Beësè Sarq, Beësè Tsawêzâ, may, I think, he referred to localities which careful research might yet find it possible to identify. It is not unlikely that ΔIMHAH has some rapport with the modern province of Dembea.

[•] Bázé, for instance, is the indigenous name for the island which is usually known under the Semitic appellation of Masawwa' (مصرة) or Massowah. This word literally signifies "the space across which a man's cry can be heard," and refers to the distance between the island and the mainland.

A silver-plated coin in the British Museum (Pl. X. No. 14) is also distinguished by the symbol of the globo and crescent. The legend is illegible, only fragments of the word BACINEYC on the obverse, and A \(\sum \text{WM}\) on the reverse, heing discernible.

The earliest coins with Christian emblems arc, in my opinion, thoso of King Okhsas. M. Halévy, in the memoir which I have cited,7 states that when he was at Aden he received a gold coin as a present from Colonel Miles, having the inscription OYCAC BACINEYC on the obverse, and OEOY + EYXA on the reverse, and he compares the royal name with that of ADAP: Auseya, Period I., List B, No. 11, and derives it from the primitive form ADA: a gift, which is often found in the nomenclature of the inhabitants of the Arabian peninsula. I have not seen a figure or east of M. Halévy's coin, but I can scarcely doubt that it is of the same type as those depicted in Plato X. Nos. 1 and 2. Of these, the former, which is in an excellent state of preservation, was lately found near Aden, and was presented by the Resident, Brigadier-General Blair, to the Museum of the Bombay branch of the Royal Asiatic Society. The other was also discovered near Aden some years ago, and was presented by Colonel Miles to the Royal Asiatic Society of London. The legends are as follows :---

OKHSAS.

1. Obv. -+ OXCAC BACINEYC.

Rev. -+ HEOY EYXAPICTIA.

[Pl. X., No. 1. Bombay Museum.]

Halèvy, Mélanges d'épigruphie, p. 140.

2. Obr. -+OXC+AC B+ACIA+EYC.

Rev. -+ OEOY EYXAPICTIA.

[Pl. X., No. 2. R. Asiat. Soc.]

The reverses of these two coins are identical; the obverses vary slightly, as in No. 2 the marginal inscription is cut up into four segments by crosses at the cardinal points. Although the Greek orthography is perfectly correct, it is in these coins that we first see that degradation of the alphabet which often throws such difficulty in the way of the decipherment of the inscription. letter B is sometimes written B, sometimes 3, sometimes C; C and E are written indifferently C and D, and A is written A and W. Tho letter X is, however, perfectly recognisable on both these coins, and the theory that the name has any connection with Aus therefore falls to the ground. I venture to suhmit the opinion that the king Okhsas is identical with the Bakhasa of the following group of coins. The letter f in the Amhario language has frequently the sound of the modern Greek B; Ababa, a flower, being, for instance, pronounced Avavá; ûb or ubit, beauty, as av, avit, &c. In the ear of the foreign diesinker, the initial labial may easily have dropped, and the result would be the transmutation of the Ethiopic Bakhasa into the Greek Okhsas. I complete this hypothesis hy suggesting that the coins with the Greek form of the regal name, and with the Greek inscription, "The grace of God," on the reverse, were intended for external use. while those with the Ethiopic form of the name, and with vernacular inscriptions in Greek characters on the reverse, were designed for the internal currency of the kingdom.

I next come to a larger group of coins, all of which hear upon the obverse the name of Bakhasa or Sin Bakhasa.

In the regal lists we find the name of nhh: Bahasa, in Period I. List A, No. 8. It is true that this king belongs to one of the præ-Christian dynasties in the lists; but this point is of little importance when we consider that the names were handed down hy oral tradition alone, and that the lists were apparently drawn up without method hy the Ahyssinian chroniclers, several names derived from the Holy Writings being found among the pagan monarchs. Before proceeding to describe the coins of Bakhasa I may mention that all of which I have notes were discovered in South Arahia, in the vicinity of Aden. The two following appear to he the earliest in date:—

BAKHASA.

The two first syllables of the inscription in the obverse have been read as BAC + CIA, for BACIAEYC, but I think without good grounds. BAC is, no doubt, an abbreviated form of BACIAEYC, and CI4 would appear to be a title of the king, for which no adequate interpretation is yet available. With regard to the legend on the reverse, Dr. Mordtmann has pointed out, with much plausibility, that the combination IANAAO is identical with the common Himyaritie surname \$\Phi\Cappa, \text{iii.}, and it was probably employed either as a designation of the king

Neus himyarische Münzen, 1880, p. 9.

himself, or of his heir-apparent. The two other words $\in \omega + BIC +$, offer greater difficulties. BIC is doubtless a short Greek form of f is and f is doubt-should probably be read, f is may either be a local name or an Ethiopio word signifying wealth or property.

The following group of coins varies in the inscription on the reverse:

4. Obv.—Ib. Rev.—1b.

[Pl. X. No. 6. Brit. Mus.]

Obv.—Ib.
 Rev.—Ib.
 [Pl. X. No. 7. R. Asiat. Suc.]

6. Obv.—Ib., with the letter ∧ over the crown.

Rev.—Ib.

[Pl. X. No. 8. Col. Prideaux.]

I have carefully examined all these coins, and have no doubt that the inscriptions are identical, notwithstanding the slight variations in the formation of the letters B, €, and C that I have previously remarked upon. The legend of the obverse cannot easily be interpreted, hut I am inclined to read it as BAC + ACA + €CB + AHA +, the first syllable being the usual abreviation of BACIAEYC. The signification of the second I am unable to explain; but the two last I venture to read as €CBAHA, Esbaël, a royal name equivalent to the more common form Elesbaa, or, in Ethiopic, AA: AS-AA: in Greek, Έλεσβάας, meaning, God has brightened. The Ethiopian king Ela-Atsbeha is thought, on good grounds, to be identical with one of the kings under whom Christianity was first intro-

duced into Abyssinia, and be was probably one of the two brothers, Aizanas and Sazanas, to whom the Emperor Constantius II. (337—361) addressed, in the year 356, a letter, which is still extant. This belief is supported by the numismatic evidence which will be shortly touched on.

The next coin of Bakhasa to which I would draw attention bears almost precisely identical inscriptions on both sides. It was found a few years ago at Hazki, a village in the vicinity of Adeu, and is now in my possession.

This piece was published by me, without a description, in the Transactions of the Bengal Asiatic Society, vol. 1. (1881), Pl. X. No. 8. I have now restored the inscription, which in places has received rough treatment. The coin probably belongs to a period of Bakhasa's reign when he exercised solo sovereignty over both the southern coasts of the Red Sea.

The last of the gold coins of Bakhasa which are represented in the plate was acquired by the Berlin Museum in 1879, and has been figured in the Zeitschrift für Numismatik, vol. vii. Pl. IV. I have been favoured with a cast of this interesting piece, the legends of which I read as follows:—

Obr. -+ CHI+BAX+ACA+BAC. In front of the head, W.

Rev.—+ HEZANA BACIAEYC.
[Pl. X. No. 10. Darlin Museum.]

³ Drouin, op. cit., pp. 24 sqq.

The name of the prince on the reverse has been hitherto read as NEZANA. I am, however, inclined to think that it is the same name as that which appears on No. 11, and that the coin was struck during the lost years of King Bakhasa, when Ezano or Aizanas was virtually sovereign of the Axumites.

In addition to the gold coins of Bakhasa, several copper coins of that prince are in existence, which have hitherto been incorrectly attributed to a certain King Asael, or Asahel. These coins bear on the obverse the bust of the king turned to the right, crowned, as on the gold coins, and bearing in the hand a long sceptre surmounted by a cross. M. Drouin remarks that the reading, Asahel, is certain, if note is taken of the fact that the sign + which follows the first letter is the cross in question. This is quite true, but previous commentators have read the legend as beginning from the top of the coin, instead of from the left-hand bottom corner. The reverse bears a Greek cross within a circle, surrounded by a legend:—

8. Obv.—BAX + ACA.

Rev.-TOYTO APECH TH XWPA.

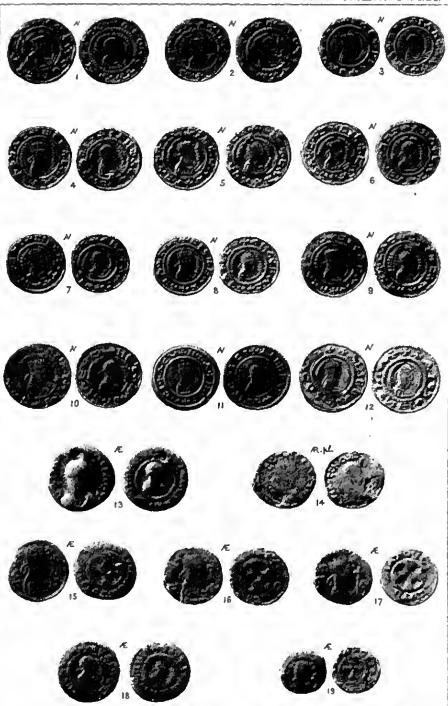

[Pl. X. Nos. 15, 16, 17.]

The legend of the reverse, which is in nearly every instance misspolt (TOTYO, TOYT, &c.), is represented on the Geëz coins of a later date in the formula, AAHA ANA ARTY: "May it be a pleasure to the peoples!"

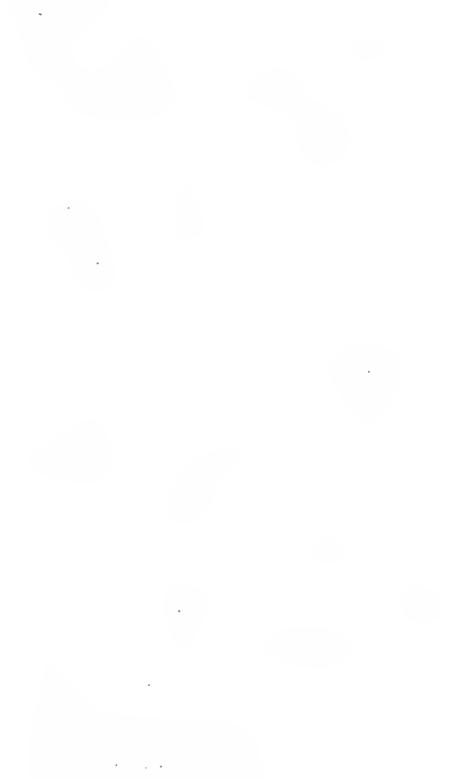

The coin which I am now about to describe was also found near Adon, and is in excellent preservation, the inscription being as fresh as when it issued from the mint. The legends read as follows:—

AIZANA.

1. Ohr. -+ HZA + NA B + ACI + AEY. Over the

COINS OF THE AXUMITE DYNASTY.

Rev.—+ AAHH + AΣω + MIT B + ICI. [Pl. X. No. 11. Col. Prideaux.]

This coin was probably struck after the death of Bakhasa, when Ezana or Aizana, who had previously reigned in conjunction with his father (v. No. 10), became, as he styles himself on the coin, sole monarch of the Axumites. What the designation BICI AAHH may mean I am unable to say; but, as in other cases, it has probably a local signification. The date of the letter from the Emperor Constantius II., viz. A.D. 356, approximately fixes the period of Aizana's reign. It was this king who celebrated his victories over the adjacent provinces of Ethiopia in the well-known Greek inscription which was discovered by Salt in 1805. In this document Aizana calls himself "the son of the invincible Arês," vîos θεοῦ ἀνικήτου 'Αρεωs, a mero façon de parler, for the king was undoubtedly a Christian, although I think numismatic evidence is against his being the first chief who renounced paganism, this honour in all probability being more justly due to his predecessor Bakhasa. I may add here that in Period 2, List B, the name of the father of Abreha and Atsbeha (the latter identical, as I think, with Aizana) is called Senfa or Saifa Ar'ad. This may suggest an explanation of the syllable, Sin, Syn, or Sni, which precedes the name Bakhasa on his gold coinage.

The following coin belongs to a king who has been hitherto unknown. It was found near Aden a few years ago:—

Atên.

1. Obv.—+++AIHB BACIAEY.

Rev.—+++AIOCOIENENA.

[Pl. X. No. 12. Col. Prideaux.]

In the List A of the Second Period, No. 24, we find an Ela-Aīha, and this coin may perhaps he attributed to the prince in question, who, however, lived, according to the compiler of the list, at a date anterior to the introduction of Christianity into Ethiopia. I must admit my inability to interpret the legend of the reverse.

The only remaining prince of whose gold coinage any remains are extant is the one whose pieces bear the inscription + Γε + Pc + E + M on the reverse, and on the obverse +BACIAI AZωMI. M. Halévy has, with great plausihility, assimilated the name of this monarch with those which figure in the lists as Germa Asfaré, or Germa Safar, and has proposed to read it Γε P(MA) CEM, "fear of the (divine) name." The analogy of this with other Ethiopic names, gives great weight to M. Halévy's suggestion.

There are several copper coins in existence bearing on the obverse a bust, turned to the right, and surrounded by two ears of barley, and on the reverse a smaller hust within a circle. The reading of the legends is not very clear, but it appears to be as follows:

1. Obv. -+ OYAZHBAC BACIAEYC.

Rev. -+ TOYTO APECH TH XWPA.

[Pl. X. No. 18. Brit. Mus.]

M. Halévy compares this name with Wazha (Period I. List A. No. 12). According to this list King Wazha reigned only one year, and that at a period long prior to the introduction of Christianity. This latter circumstance is not of much moment, but if the duration of the monarch's reign was as short as tradition reported it to be, it is

difficult to account for the comparatively large number of his coins that have been found. I have more inclination to agree with M. Drouin's suggestion that Ûlzêbas is an ignorant moneyer's corruption of the common names Ela-Atsbeha or Ela-Tsebâh, which occur frequently in the regal lists.

In addition to the coins which bear royal names, copper pieces are occasionally found which simply have the title BACINEYC round a small head on the obverse, and the legend TOYTO APECH TH XWPA on the reverse round a Greek cross (Pl. X., No. 19). These of course it is impossible to identify, or to attribute to any one of the numerous monarchs who fill the legendary lists.

W. F. PRIDEAUX.

VIII.

COINS STRUCK BY HANNIBAL IN ITALY.

So far as I know no one has attempted to determine what coins were issued by Hannihal when in Italy. He must ohviously, in paying a large army of mercenaries, have used money vory largely. Indeed the employment of mercenaries was in ancient times one of the especial occasions for minting eoins. M. Six has shown that the generals of the Persian Empire hardly ever issued coins in their own names except on the occasion of a military expedition; and Mommsen maintains that the early gold money of Rome owed its origin to military needs.

What money then did Hannibal use? Very probably he did not scruple to use any that he found current in the regions which he occupied, including the denarii of Rome herself. The Carthaginians can scareely be said to have had a national coinage, most of their types heing taken from the Greek issues of Sicily. They would therefore feel the less scruple in using coins hearing the types and legends of other races. Hannihal may also have issued in Italy some of those electrum pieces of the weight of 45-42 grains (2.90-2.70 grammes), which hear on one side the head of Persephone, and on the other a horse standing or trotting. These coins, alike in the hadness of their style and the haseness of their metal, bear signs

of belonging to some of the last times of Carthaginian independence; hut whether they are found in Italy I do not know.

There is, however, a set of the coins of Campania which appears to me to bear clear traces of the influence of Hannibal. They are the electrum coins placed by general consent at the end of the Romano-Campanian series, which may be thus described:—1

Obv .- Beardless janiform head.

Rev.—Zeas in quadriga, holding sceptre and hurling thunderbolt; Victory holds reins of chariot.

El. Wt. 3·10 to 2·58 (48-40 gr.)

That these pieces were minted at Capua, and that they belong to the last times of Campanian eoinage, is recognised in Mommsen's great work; but that writer does not bring them into special connexion with Hannihal. Several facts, however, seem to me fully to establish that connexion:—

(1.) Mctal and weight are the same in these eoins as in the above-mentioned late issues of Carthage. Electrum

¹ D'Ailly, i., Pl. XLVI., 4, cf. p. 189.

² Trans., vol. iii. p. 229, &c.; vol. i. p. 264.

as a materiel was usual in all the later Carthaginian issues; in Italy it was quite exceptional. The monetary standard is that called the Phonician, somewhat debased. The weight of the Capuan coins is absolutely identical with that of the Cartheginian issue. But this weight does not occur elsewhere in Italy. The earlier coins of Capua are some eight grains heevier and of pure gold. The Roman gold coins of Hannihal's times, those hearing an eagle on the reverse, are struck of the weight of 3, 2, and 1 Roman scruples, that is, 52.5, 35, and 17.5 grains. But these electrum coins contain no exact number of Roman scruples. Mommsen 3 indeed suggests that they contain 21 scruples of electrum, or 2 of pure gold, deducting 20 per cent. as alloy. But there is obviously something arhitrary in this supposition. With equal justice we might deduct 25 per cent., or any other proportion.

(2.) The typos show Carthaginian influence. They are imitated, it is true, from earlier coins of Capua—silver coins, be it observed, not gold—which bear the name of Rome and the types of Janus head and quadriga of Zeus. But in the copying, instructive changes are introduced. The name of Rome is entirely dropped. We might, perhaps, have expected to find in its place the name of Capua, es the city in its convention with Hannihal expressly reserved its autonomy. But the Capuans may for some reason have stopped short of that extreme assertion of independence alike of Rome and Carthege. The quadriga of Zeus seems to he a type especially affected by the Capuans, and not by any means forced on them by

³ Trans., vol. i. p. 264.

⁴ Livy, xxiii. 7.

Roman influenco; indeed it is not originally a Roman type at all. There could, therefore, be no reason why they should drop the type when striking in independence and defiance of Rome. But it is in the obverse type of our electrum coins that we see clearest traces of Carthaginian influence. For the head there, though apparently an imitation of the beardless head of Janus, is not so really. It is decidedly female in character: 5 and not merely so; each of the faces corresponds in the closest degree in outline and character with the head of Persephone on late electrum coins of Carthage, and above each face clearly appear the two ears of corn which mark the Carthaginian head. Thus we have here no head of Janus, but a janiform head of Persephono, the accustomed doity of the Carthaginian money.6 The doubling of the head is evidently a concession to local customs of mintage, as the Capuan mint was so accustomed to janiform repro-And abstracting this difference, only one sentations. romains, or seems to romain. Persephone on the Carthaginian coins wears invariably the feminino ornaments of necklaco and earring; and these apparently do not figure on its Capuan copy. I would, bowever, remark in reply, first that the absence of the carring in the second ease is not quite certain, and secondly that the janiform arrangement does not well lend itself to female adornment. At any rate this trifling difficulty is not strong enough to cancel the positive evidence which shows that

⁵ D'Ailly remarks this, i. p. 188, but considers the appearance fallacious.

A janiform female head occurs on the coins of Syracuse at an earlier period. See Head, "Coinage of Syracuse," Pl. VI.. 15. It is the more important to note this because the types of coins of Carthage are so often suggested by those of Syracuse.

the intention was to produce a double femalo head crowned with corn.

It is I think clear that these electrum coins were issued at Capua during the subordination of that city to the Carthaginians under Hannibal. And we thus gain, not merely an interesting illustration of history, but an important fixed point for determining the dates of other Italian issues.

PERCY GARDNER.

A HOARD OF ANGLO-SAXON COINS FOUND IN ROME

ANO DESCRIQED BY SIG. DE ROSSI.

A VERY interesting find of Anglo-Saxon coins has lately hoen made in Rome. It has been described by the Signor Commandante De Rossi, by whose kind permission I am able to lay before the Society the following account of the find, abridged from that of Signor De Rossi, such portions of his valuable paper as are not concerned directly with numismatic questions being emitted.

During some excavations which were being carried on near the House of the Vestals, at the foot of the Palatine, a hoard of coins was discovered, enclosed in an earthenware vessel. It consisted of 830 Anglo-Saxon pennics, ranging in date between 871 and 947, that is to say, of coins which to all intents may be accounted contemporary. Together with these English pieces were two denarii of Pavia, ono of Ratishon, and one of Limoges, all of the end of the ninth century, or the first half of the tenth, and finally, one solidus aurcus of the Byzantine emperor, Theophilus (829-842). It is evident that the find forms a single treasure, collected probably by one person within a very short period, not hoarded for a number of years. It is to be noticed that the find does not include one coin of Rome, which seems to preclude the idea that it was amassed in that city. Everything, in fact, points to the conclusion that the main body of the picces consisted of what were called in this country Peter's Pence, Rom-feeh, or Rom-scot. The denarii of Limoges and Ratishon

might very well have made their way into England, and have formed part of the treasure collected. There would be nothing peculiar in the presence of the Byzantine gold coin in the heard, for, as we know, the Byzantine solidi passed current over the whole of Western Europe at this time, supplying the place of a native gold coinage to these lands, much as the Persian daries passed current in Greece proper, and furnished its cities with the higher currency, which their native mints did not produce.

Had, then, these coins been found quite alone we should have said, with something like cortainty, that they had been brought hither by some pilgrim from England, deposited by him and lost (probably through his death) before they could be delivered to the representativo of the Pope. This idea is negatived, however, hy the discovery with the coins of a fibula, unique in this respect, that it bears upon its two facets the inscription, + DOMNO MA + RINO PAPA (sic) (for Domino Marino Papæ). Popo horo referred to is undoubtedly Marinus II., who reigned from 942 to 946. The exidation on the hroseh and on some of the coius is so exactly the same, that there can be no question of their having formed parts of one and the same deposit. The hrooch is, says Signor Do Rossi, so far as the shape alone is concerned, of a kind that might have been worn by any soldier or official of the Papal court. The chief distinction between the dress of such persons and the dress of the clergy lay in the fact that, whereas all alike wore the short cappa plurialis, which had succeeded to the earlier Byzantine chlamys, this cloak was worn by the clergy, as it still is by the higher orders of them, fastened in front, whereas by the laity it was fastened upon the shoulder by means of a brooch. But no such brooch has hitherto been found with the name of the Pope upon it. It caunot, therefore,

he supposed that such wore worn by a largo class of Rather is it probable that their use was confined to the most intimate officers of the household. It is fair to suppose that the possessor of this fibula was entrusted with the receipt of a part, at any rate, of the Peter's Pence; that for some reason or other this particular receipt was kept separate from other batches, was buried by this officer, and thus lost sight of. With regard to the reasons which may have led to its interment, Signor De Rossi points out that during the pontificate of Marinus II. Alheric, Prince of the Romans, was at war with Ugo, King of Italy, the Pope being upon the side of the former. Ugo extended his troops as far as Rome, of which he attempted to gain possession by corrupting the citizens. Peace was not made between the two rivals before 946. It is highly probable that at a moment of panic the coins in question were buried.

Whatever else, then, may be doubtful about this treasure, there can, I think, be little question that it consists almost entirely of Peter's Pence. So far as I know, it is the first find of which so much can be said. It is worth while, therefore, to recall some of the circumstances in which this tribute was levied at this time. Signor Do Rossi says: "Cardinal Garampi wrote a special dissertation upon the original institution of this pious tribute, which dissertation was read in Rome in 1750, and was one of the latest labours of that learned man. It is preserved in the Codex Vaticanus Latinus, 9022, from which I have drawn some of the following facts. The excessive devotion of the Anglo-Saxons of this period to the Apostle Peter brought a very large number of pilgrims from that nation to Romo, and many of their kings even, from the seventh century enwards, made the journey to Rome in order to pay their devotion to the tomb of the chief

of the apostles. Ceadwalla, King of the [West] Saxons, chose to be baptized in the font at the Vatican, and, dying at eighty in the white vestments of haptism, was huried in the hasilica of St. Pcter, 689. King Ini came to Rome about 725, chose never to depart thence, resigned bis kingdom, and in like manner died near the tomh of the great apostle. The same pilgrimage was made hy Offa I., Siric [King of Essex], Offa II. [there is, however, no foundation for this statement, as Archdeacon Pownall has pointed out in the pages of this Journal], and Coenred. Other Anglo-Saxon kings came to Rome in the eighth and ninth The hospitium of the Saxons, and their constantly growing colony round the gates of the Vatican, outdid anything of the sort which could be shown hy any other nation. So much so that the earliest portions of the Leonine city were the burgus Anglorum and the vicus Saxonum. For the maintenance of such an important hospice, and as a gift of devotion to the basilica of the apostle and to the Pope, the Peter's Penco was instituted at the ond of the eighth century, or the beginning of the ninth [by Ini, King of Wessex, according to some; Bishop Stuhbs thinks more probably by Offa, King of Mercia, circ. 787]. It consisted of the contribution of a denarius from the head of each family possessed of a cortain quantity of land. This contribution was in full vigour at the time of the above-named deposit during the pontificate of Marinus II., and mention is made of it in the laws of Edward I. [the clder], whose coins are very numerous in this hoard. Garampi points out that at the end of the tenth century (998) the annual tributo was calculated at a fixed sum of 300 marks of coined pennies. The mark was equivalent to 160 pennies, so that the above treasure, a little above 5 marks, was equal to the contribution of more than eight hundred families."

From all which it appears that in the ninth ceutury there was as large an English colony in Rome in propertion to that of other nations, as there is in the nineteenth century. Our modern pilgrims pay their tribute too, but it is to hotel landlords rather than to the basilica of St. Peter's.

To the above account, given hy Signor De Rossi, I will add all the passages that I know of in the early English laws which speak of this Rom-feeh. (See also Stubbs' Const. Hist.).

Gif hwâ Rom-feeh ferhealde, gylde lah-slit mid Denam wîto mid Englam.

(If any one withhold the Peter's Penny, he shall pay the Danish mulct if a Dane, the English fine if an Englishman.)

—Laws of Endweard (the Elder) and Guthrum, 6, § 1.

peôdunge we heheôdad ælcum cristeaum men he his cristeadôme, and cyric-sceat and Romfeoh and suhl-ælmessan. And gif hit hwâ dôn aelle, sý he âmânsemed.

(We order of every Christian man by his Christianity to pay his tithe, and the church-money, and Peter's Penny and the plough-penny [paid hy every hide of land for the poor]. And if any one will not do this let him be excommanicated.)—
Eadmund's Laws, i. 2.

And sý wle heor's-penig i agifen be Petres mæsse-dæge, and se pe hine tô pâm andagen gelæst awhbe, læde hine tô Rome and pær te eaean xxx pænega and bringe penne pouon swutelunge pæt he pær swå micel betæht hahe.

And poane he ham cume, gylde pâm cynge hund-twelftig scillinga.

(And let every hearth-penny be given en St. Peter's mass; and if any one has net given it hy that day he shall carry the same to Rome and 30 pennies mere, and hring thence the preef (shewing) that he has paid so much. And when he comes home he shall pay the king 120 shillings).—Eadgar's Laws, ii. 4.

And Rem-feeh he Petres mæssan and ciric-sceat to Martinus mæssan.

The word hearth-penny is here used for the Rome-fee; semetimes it is used for the plough-penny.

(Aud the Peter's Pence at Peter'e mass and the church-money at Martinmass.)—Æthelred's Laws, vi. 18.

Et ut detnr de omni caruca denarius vel denarium valens et omnis qui familiam habet efficiat nt omnis hyremannns euns dot unum denarium quod si non habeat det dominns ejus pro eo, et omnis thaypns decimet totum quicquid habet.

(Let there be given from every hide of land a penny or the worth of it, and let every head of a household see that every one of his tenants pays a penuy; and if he have it not, let his lord pay it for him, and let every thane pay the teuth of what he has.)—Æthelred's Laws, vii. 1, § 2.

** The heading of this chapter is "De denario sanctæ ecclesiæ daudo ot decimatione Thayuorum." It may refer to the Peter'e Pence; more prohably to the plough-penny. The last sentence, of course, refers to the tithe. In the A.-S. version, however, uo mention of Peter's Penco ie to he found (cf. Aethelred vii. Append. 5). The word hyremannus (for hiredman, eee A.-S. vers.), ie one possessing varions significations. "Tonant" is perhaps the hest translation that can be given here.

And Romfeoh gelæste man æghwilco geare he Petres mæssau, aud se pe pæt nelle golæstan, sylle par to oacau xxx peuinga and gilde phm cyninge cxx scill.

(And let the Peter's Pence he paid every year at Poter's mass, and if any one will not give it, he shall pay in addition 30 pence, and to the king 120 shillings.)—Ibid., viü. 10.

The provision in Cnut's Laws (i. 9) is almost identical with this last,

De deuario Sancti Petri qui Anglice dicitnr Romoscot.— Omuis qui hahnerit xxx denariatas vivæ pecuniæ de suo proprio in domo sna, lege Anglorum denarinm Sancti Petri; ot lege Danorum dimidiam marcam.

§ 1. Iste vero eummouiri dehet in festivitate sanctorum Apostolorum Petri et Pauli et ultra festnm Saucti Potri ad Vincula uon detineatur.

§ 2. Si quis vero cum detinuerit, ad justitiam regis clamor deferatur, quoniam ille denariue oleemosiua regis est, et justitia regis reddere faciat deuarium ot forisfacturam regis et episcopi.

§ 3. Et si quis plures domos hahuerit, do illa uhi residens fnerit festo Apost. Petri et Pauli, reddat denarium.

A77

(Every one who chall have 80 pennies-worth of live-stock

of his own in his holding, by the English law shall give the St. Poter's Penny, hy the Danish half-a-mark.

§ 1. Moreover, this is to be collected (applied for) at the feast of the Apostles Peter and Panl (June 29), and is not to be kept back beyond the feast of St. Peter ad Vincula (Ang. 1).

§ 2. But if any one does keep it back, the complaint is to be hrought note the king's court, seeing that this penny is the king's charity; and the king's court shall order the payment of

the penny and the fine to the king and the bishop.

§ 8. And if any one was in possession of several honses, the ponny shall he given (shall be assessed) for the house in which he resided at the time of the feast of St. Peter and St. Panl.)—
Eadweard Confessor's Laws [Codex Harl.], 10.

57, § 1. And we willa's, pret relc Rompanig heô gelast he

Petres mæssan to pam hisceopstôle.

§ 2. And we willas, pæt man namigo on ælcon wæpengetæce ii trywe pegnaa and ænne mæssepresst, pæt hi hit gegaderian and eft ågifan, swå hi durran to swerian.

58. Gif cyninges pegn offe anig landrica hit forbæbbe

gilde x healf-marc, healf Criste, healf cynge.

- 59. Gif hwilc tunesman unigne panig forbele of the forhabbe, gilde so landrica pone panig and nime unne oxan ut pam men; and gif landrica put fergime, ponne fo Crist and cyning to fulre bote xii or.
- 57, § 1. And we order that every Peter's Penny shall he paid at the hishop'e seat at Peter's mass.

§ 2. And that in every wappentaks two true thanes and a mass priest shall be named, who shall collect it (the Rome Penny) and deliver it up according to oath.

58. If a king's thane or any landlord (squire) refuse the penny, he shall pay ten half-marks, half to Christ and half to

the king.

59. If a townsman keep hack or refuso the penny, the landlord shall pay the penny and take an ox from the man; and if the landlord neglect to do this, then let Christ and the king receive the full penalty of 12 ore (39 sb.).—Northumbrian Priests' Law.

The general upshot of this is that the Peter's Pence was a yearly tax of a penny levied on each household (on each free household, that is to say). It was due on the feast of St. Peter and St. Paul (June 29th); but there having been some lexity in the collecting of it the latest

day on which it could be paid came to be the feast of St. Peter ad Vincula (Aug. 1st). In some of the onactments we see further restrictions on the collection of it, as that it was not to be paid by a head of a household who had less than thirty pennyworth of live stock. In the case of tenants or vassals the lord was made responsible for their payment of the tax. The fines levied for neglect to pay the tax are various—30 pence to the Pope, and 120 shillings to the king, being the most usual.

The other taxes, or, as we might better call them, rates, levied by the Church were the tithe for the support of the olergy, and the suhlælmessan, or plough-penny, the poor-rate of a penny levied on every hide of land.

Before proceeding to speak of the points of interest bolonging to the coins of the find in themselves, there is one other fact to be gathered from the general nature of the hoard considered as a relic of the Peter's Pence. This is the fact that it contains no specimen of the pennies which bear the legend, ser PETRI, and which were once supposed by numismatists to have been struck for the special purpose which the coins of this find fulfilled. That theory has already been pretty well abandoned. But this find may be considered to put the question finally at rest. The pennies with the name of St. Peter could have had no connection whatever with the annual tribute to Rome. They were, we may say, certainly struck simply by the foundation at York, which was dedicated to St. Peter, and of which the Minster Church is the relic. This is exactly parallel to the case of the St. Edmund pennies, which were-in the beginning, at any ratestruck only by the monastery at Bury St. Edmunds.

I will now add the list of the coins as it is given by Signor De Rossi.

Résumé.

It will be seen that the find gives us the names of many new monoyers and of some new towns; new, that is, as regards the kiags under whom their coins were struck. The following is the list of these which do not occur in Mr. Kenyon's edition of Hawkins's Silver Coins, not taking account of mere differences in writing the same name.

Enward the Elder.—Now Moneyers: Adalbert, Aguez, Badda, Beornwulf, Bonus Homo (a very remarkable signature—for Goodman, I suppose), Durlac, Eardulf, Earnvlf, Eavvlf (though we are not bound to suppose all these last three the names of different persons), Etila, Garulf, Gundbert, Hadebald (Harebald?), Heaer..., Heremfretia (perhaps same as Hoienfred—Ken.) Hirebald (if not the same with Hadebald), Magnard, Marbert, Odo, Pastor (another Latinization probably), Tuda, Pinegear (Winegear), Samsun, Stear.

AETHELSTAN.—Moneyers: Abonol, Aenle, Aethelvlf, Berngar, Biorhtvic, Cenbreht, Cioenec (?) Cvnvlf, Da-(u?)riant, Fvam (= Ekvam?—K.) Fulrad, Eadlild (Eadgild), Eardvlf, Etolsigo, Efdenelm (Eftbenelm), Herebeav, Ildebert, Inga, Ingelbert, Manning, Robbard, or Robbard (= Renard?—K.), Sanduc, Sibares, Sprohene, Wilebald, Wilro (Ulrie), Durlae (Dorlfo?—K.).

Names of cities.—The inscription, Cantun Urb, is remarkable. The coins placed by Signor de Rossi under Dorchester belong to Canterbury. Cussan civ may be for Cyssancesster civitas. The suggestion was, indeed, my own, though the attribution must be considered but doubtful. I have far less hesitation in attributing Darker to Darentmutha (Dartmouth). This was also my sugges-

tion, and has been adopted by Signor Do Rossi. The legend is given in Hawkins's (ed. Kenyon), but it has not been assigned to any town. The mints of Hertford, Lewes, Maldon, Shaftesbury, do not occur in Konyon among the mints of this reign.

EADMUND.—Moneyers: Abenel Abheav, Beorwold (this may be the same as Byrnwald, Deorwald, Diarwald, which also occur), Berhtred, Byrnwald, Diorwald, Eadlild, Edirebel, Efgeulf, Einard, Elaet, Elferd, Elfwald, Giongbald (?), Gis, Grimwald, Hadebald, Hereman, Hldeomert (?), Iedvlf (Acdulf?), Nainma (?), Obelrices, Osferd, Osmund, Osvlf, Prim, Raegonold (= Regenulf?—Ken.), Rodheriht, Rodearn on Norwich, Sigwoldes, Stofhan, Telia, Varengod, Wulfric.

ANLAF.-Moneyers: Arnulf, Nove.

SITRICE CYNVNC: Radvlf.

PLEGMUND (Archbishop): Aedelfred.

C. F. K.

ON THE MEDIÆVAL TYPE OF FRONT-FACED SEATED FIGURE.

From the earliest period the type of seated figure occurs on reverses, the figure in some cases, as on coins of Alexander the Great, representing Zeus, and in others, as on those of Imperial Rome, the Emperor, but until the decadence of the Roman Empire always in profile.

The oarliest example I have of the front-faced type is on a denarius of Gratian, 361—89; the next is on a Byzantine solidus of Justinus II., 565—78, but, like the front-faced portraits on obverses, it is of unusual occurrence at this period, and transitional from the classic profile type to the medieval front-faced one.

The general adoption of the latter type of figure dates from the eleventh century, at which period several examples of it occar on the solidi of Constantinople. Very few countries then had a gold coinage, and these solidi, or "bezants," circulated extensively heyond the limits of the Byzantine empire to supply that deficiency, and to this the almost simultaneous adoption of the type by various countries may prohably be attributed.

The usual Byzantine type was Christ in the act of benediction, executed in a style superior to that of any existing contemporary coinage; and the strong religious feeling

J. J. Less.

then prevalent cenduced to the imitation of that which was doubtless much admired.

Fig. 1, Pl. XI., a solidus of Isaac I., 1057—59, is an example of this type; fig. 2 is a rude imitation of it, struck in Bulgaria by the Czar Swiatoslaw Jaroslawicz hetween 1073 and 1078; on both of the foregoing coins the figure is that of Christ, hut on a penny of Edward the Confessor 1042—56, (Hawkins, 228), it is that of the king.

Of the twelfth century, fig. 3, Lee II. of Armonia, 1185—1218, and fig. 4, Henry VI. of Germany, 1190—97, respectively represent those monarcha.

In the next century the type multiplies; on fig. 5, a Venetian matapan of the Dogo Pietro Ziani, 1205—28, and fig. 7, a Servian coin of Stephen IV., 1272—75, the original Byzantine idea is retained; but on fig. 6, a soldine of Milan struck during the republican period, 1245—73, its patron, St. Ambrose, takes the place of Christ, as does the king on the gold penny of our Henry III. which was struck in 1257.

Of the fourteenth century, fig. 8 is the real au lien of Louis de Male, of Flanders, 1346—84, representing the Count; hut fig. 9, Andronicus II., of Constantinople, 1325—28, has the original Byzantine type of Christ; this type is also retained on the Venetian ceins, as is that of St. Amhrose on those of Milan; while on fig. 10, Robert I., of Naples, 1309—43, the king is represented.

During the fifteenth contury Venico retains the original type of the thirteenth (shown in fig. 5), and Milan that of St. Amhrose; sometimes, however, as in fig. 11, a coin of the Duke John Maria, 1402—12, the Saint, instead of hlessing, hrandishes a scourge (in allusion, it may be, to Christ driving the money-changers out of the temple).

Fig. 12, of Pisa, is a gros d'argent of the French King

Charles VIII., as "Pisanorum liherator," struck in 1494, and has a representation of the Virgin and Child.

Of the sixteenth century, fig. 13 is a testoon of Louis II. (Fieschi), Lord of Lavagna (a dependency of Genoa), 1528—32, representing St. Theonestus, Martyr; fig. 14 is a thaler of Ernest of Bavaria, Archbishop of Salzburg from 1540 to 1554, representing St. Rudbertus, and fig. 15, a testoon struck at Ancona, by Pope Paul IV., 1555—59, has St. Peter in the act of benediction.

The type now becomes very unfrequent, its place being taken either by some less conventional design, or, as is more frequently the case, the arms of the respective sovereigns by whom the coins were struck.

JOHN G. HALL.

XI.

A GOLD SOLIDUS OF LOUIS LE DÉBONNAIRE.

I HAVE the pleasure of ealling the attention of the Society to a remarkable gold coin which has recently been discovered in the Isle of Man. The circumstances of its finding are as follows. In the churchyard of Kirk Maughold are indications of the existence of some very ancient structure, to investigate the nature of which some exeavations, an account of which will appear in a forthcoming number of Mr. Llowollynn Jewitt's Reliquary, were commenced in the month of June in the present year and are intended to be further carried on. The coin. which through his kindness has been submitted to me, lay in one of these excavations under a small heap of white pebbles, along with some fragments of hono, and close to the remains of some foundations of a building. It would appear that around the spot there were remains of several early interments of hoth hurnt and unburnt bodies as well as fragments of pottery.

The coin may be thus described :--

Obv. -D.N. HLVDOVVICVS IMP AVG. Laureate bust to the right, the shoulders draped.

Rev.—DDNVAVG--CTYIOTLN. Draped femalo figure standing with arms extended, and holding between them a kind of beaded cord.

Wt. 68 grains.

The workmanship of the obverse though somewhat rude is foreible. The hust is narrow and upright, and somewhat resembles that on some of the pennies of Coenvulf of Mercia, who for a few years at the end of his reign was a contemporary of Louis, whose own reign extended from a.p. 814 to 840, though he had been associated with his father Charlemagne as Emperor in 813, and had been King of Aquitaine from his hirth in 778. The workmanship of the device on the reverse is of inferior execution, and it is difficult to understand the significance of the cord, which in cemhination with the two arms has the eppearance of a how extended transversely across the standing figure.

The gold coins of Louis le Débonnaire are by no means common, though specimens exist in the British Museum and in other cahinots. The best executed type may be described as follows:—

Obr.—D.N. HLVDOVVICVS IMP. AVG. Lanreate and draped bast to left.

Rev.—MVNVS DIVINVM. A plain cross in the centre of a laurel wreath, with ribbons below, and a small circular ornament at the junction of the two branches forming the wreath.

Of this there are several more or less 2 harbarous imitations on which the head frequently occurs to the right instead of to the left, and the legends are sometimes almost unintelligible. It is somewhat remarkable that two coins of Louis should have heen found in England at nearly the same time, but one of these barbarous coins was lately dug up near Lewes, in Sussex, I helieve during

¹ See Rev. Num. vol. ii. Pl. VIII. 2. 3 Op. cit., Pl. VIII. 8.

the course of the present year. The head is to the right and extremely rude in its execution. The legend on the obverse can hardly be recognised, and that on the reverse besides being barbarous has been abbreviated to HVIID-OVIIVI. The weight of this coin, which is now in my own collection, is 67 grains, that of the Isle of Man coin being 68 grains, or very nearly the weight of the ordinary Byzantino solidi of the period. The weights of the two coins described in the Revue Numismatique are 132 and 77 French grains respectively, so that one of them may be a double solidus.

Notwithstanding the known existence of at least four or five of the solidi of Louis in 1837, M. Cartier, in his dissertation on the coins of the second race in France, does not accept them as forming part of the currency, but regards them as either trial-pieces, such as some of our Angle-Saxon gold coins seem actually to have been, or as specially struck for distribution by way of largesse at the time of the association of Louis in the empire with his father, or when he was a second time proclaimed Emperor after his father's death.

It seems more probable that there was an actual coinage of French solidi during the reign of Louis, and that though the issue may have been limited, enough were struck for them to become subjects of imitation not only in Frence but in neighbouring countries.

The solidi of Leo V., Michael II., and Theophilus, who were contemporaries of Louis le Débonnaire, are by no means rare, and though in their full-faced busts they essentially differ from those of Louis, yet their existence proves that in the Empire of the East a gold currency

³ Rec. Num. vol. ii. p. 256.

was in full force, so that the coinage of an analogous circulating medium in the West is a priori probable. The prototype, however, of the Western coins must, I think, be sought in the Western gold coins of the fourth century, rather than in the contemporary Eastern solidi. The narrow, upright bust, and the cross or Christian monogram in the centre of a wreath are both of frequent occurrence on Roman coins of that period, though it is perhaps impossible to specify the coin which was actually copied in the case of the coin now under consideration.

One is strongly tempted to assign some definite meaning to the legend on the roverse of the Kirk Maughold coin, so as in some manner to localise its issue. I fear, however, that the most probable interpretation of the legend is that it is merely a barbarous reproduction of VICTORIA DD NN AVGG, though the figure can hardly be that of Victory, hut may be an original design of the chief engraver of the mint of Louis le Débonnaire.

The presence of such a coin in the Isle of Man must I think be attributed to its having been brought there by some of the Viking settlers. Coins of Louis have ere now been found in Norway. In the find at Eger described by Professor Helmboe in Grote's "Blätter für Münz-kunde," wore two such associated with a number of other coins and with gold ornaments. M. Cartier speaks of the coins as being of gold, but a reference to the Blätter makes me entertain doubts whether they were not of silver. One of them was struck at Arles, and had therefore travelled very far from its original home.

JOHN EVANS.

XII.

OBSERVATIONS ON TWO MEDALS OF SULEYMAN I. AND TAHMASB II. OF THE SUFI DYNASTY.

A FEW months ago I received from a friend, together with several coins, two medals which he had purchased in Persia from some persons of the lower class, who were wearing them at the time on their arms as amulets; and when they were given to me, each had two loops soldered on for the purpose of the string passing through them to fasten on to the arm, whilst one had traces of a loop on the margin, as if it had been suspended from the neck. The earliest of these medals belongs to Suleyman I., son of Abhas II., the eighth monarch of the Sufi dynasty, who reigned on the Persian throne from 1666 to 1694, and weighs 572.5 grains.

The second medal bears the name of Tahmasb II., grandson of Suleyman and son of Huseyn, whose nominal reign lasted from 1722 to 1732, and weighs 390 grains, being larger and thinner than the preceding. Both medals are of nearly pure silver, and the legends, which are partly in Persian and partly in Arabic, are finely executed and in excellent preservation. In vol. vii. of the Journal of the Asiatic Society, p. 416, Mr. Prinsep gives the drawing of a medal of Huseyn, dated A.H. 1118,

A.D. 1706, weight 844.3 grains, and Mr. Marsden also describes a largo silver medal of Huseyn, A.H. 1121, A.D. 1709. With the exception of these two medals, I am uot awaro that any others belonging to the Sufi dynasty have ever been found or numismatically observed upon.1 Tavernier speaks of these medals as having been principally coined in silver and thrown amongst the people at the coronation; but as neither of the coins of Huseyn nor that of Suleyman hears the dates of their respective coronations, it may be inferred that they were not only coined on such occasions, but were also struck in honour of some memorable event that occurred during their reigns. This would be more probable than that they were, as suggested by Mr. Prinsep, struck on the royal hirthdays. The troublesome times in which those monarchs lived is also, I think, against such an asaumption.

The date on the medal of Suleyman is a.n. 1099, a.n. 1687, and it is a curious coincidence that in this year Sultan Suleyman, the son of Ibrahim, ascended the masnad at Constantinople. The reign of Husoyn was much more disturbed than that of his father Suleyman by invasion both from the east and the west, and it is quite possible that in the vicissitudes which attended the fortune of these times, events may have occurred adding a temporary lustre to his otherwise unenviable position, which, like most oriental magnates, he sought to commemorate hy the distribution of medals, which might also be the means of popularising and ingratiating him-

The British Museum contains a few specimens of the reigns of Suleyman and Huseyn, including that of the latter king described by Marsden.—R. S. Poole.

self with subjects ever ready to transfer their allegiance to those who seemed best calculated for the time to advance their interests. In A.H. 1135, A.D. 1722, the Afghan chief, Meer Mahmood, having ropulsed the Persians on all sides, completely routed them at Gulnahad, under the walls of Isfahan, and the capital, after enduring the horrors of famine for several months, was obliged to capitulate, Huseyn transferring the royal aigrette with his own hands from his turban to that of his conqueror Mahmood. Thus the rule of Porsia, which for two hundred and twenty years had been in the hands of the Sufi dynasty, passed to the Afghans; for though Tahmash II., who was in the west at the time, vainly endeavoured to assert his rights, we find that he had little power of his own, heing at last almost entirely in the hand of Tahmash Kooli Khan (Nadir Shah), who finally deposed him in 1732.

It is not clear how the medal of Tahmash came to ho struck at Korman. Truo, Isfahan was in the hands of the Afghans, but Tahmash was in the west at this time, and unfortunately there is nothing in the logends to explain the circumstances under which it was struck.

The following are the legends on the two medals, with their respective translations.

1. Obv.

Area.—The Shiah profession of the faith.

Margin.—The names of the twelve Imams.

1'59

سليمان بنده شاه ولايت ضرب اصفهان بنده شاه ولايت

"Suloyman, servant of the lord of the welee-ship (Ali). Struck at Isfahan, 1099."

Margin. - Couplet:

"Since I struck the love of 'Ali on the metal of my soul By the grace of God the world submitted to my sway."

2. Obv.

Area. - Shiah formula.

Margin.—"God bless Mohammed and Ali," &c., the other eleven Imams being enumerated, Mohammed, the 12th, being called the Mahdi.

Rev .- Couplet :

"Tahmash the Second struck in gold of pure quality: There is no hero but Ali, no sword but Zulfikar. Struck at Kermau, 1185."

E. LEGGETT.

Kierrachee.

ADDITIONAL NOTE BY R. S. POOLE, ESQ., LL.D.

The medal of Tahmasb II. is dated in the year when he was proclaimed at Kazvin. It affords the only evidence we have that his authority then extended eastward of Isfahan, where Mahmood ruled. The Shiah inscription, with its warlike defiance, is specially directed against the Sunni Afghan.

The author's remark that the Persians were fickle to the Sufis is not borne out hy history. This medal, struck far away from the Sufi Shah's territory, is a fresh proof of their fidelity.

MISCELLANEA.

Accedomaros.—In a paper published in the Numismatic Chronicle, in the year 1856 (vol. xviii., p. 155 ff.), Mr. John Evans was the first to read upon cortain British gold coins, most of which horo only a fragmontary inecription, the legend ADDEDOMAROS. In that paper and in hie Coins of the Ancient Britons, p. 363 ff., Mr. Evans contonded that this word must, on account of its termination, he Gaulish, and that it was likely to be the name of a chieftain rather than of a tribe. Of the history of this British prince, whose dominions must have lain in the eastern counties, it is unlikely that we shall ever loarn much more; hut as a confirmation of the substantial correctness of Mr. Evans's reading and explanation of the logend ADDEDOMAROS, it eeems worth while to call attention to the fact that among the names which the recearchee of M. Adolpho Pictet (Revue Archéologique, N.S. xi., p. 8), and of M. A. de Longperier (Œurres, tom. iii. p. 849 ff.), have added with cortainty to the Ganlish onomasticon is that of Atepomarue, a word which would eecm to he the same as the Addedomarcs of the coins. Atepomarue appears to have been a not uncommon Gaulieh name (cp. also the name 'Ατεπόριξ, Rev. Arch. N.S. xi., p. 111). Aristides of Miletus, in a fragmont precerved hy Plutarch (Fragm. hist. Graec., ed. Müller, 1851, tom. iv. p. 320) mentione a king of the Gauls who hore this name Ατεπόμαρος Γάλλων βασιλεύς; and a paesage in the Pseulopluturchea (de Fluviis vi. ed. Didot) records the existence of another Atepomarue, a Ganlish chief who founded Lugdunnm. Atepomarus has also heen recognised (Longpérier, op. cit.) ae a Ganlish name in several inscriptions, in one case as heing the name of a potter. Perhaps the name of our British Addedomaroe would be more correctly given as Atedomaros, or, better, Atopomaros. The D'e in the first syllable of ADDEDOMAROS are written on the coine in varioue ways, ranging (as Mr. Evans has already pointed out) from the Roman D through the Saxon D to the Greek O. This would seem to point to ATE-a frequent Gaulish prefix—as the true form of the name; possihly too the D in the syllable DOM should be read as P (POM), though, so far as the specimens in the British Museum are concerned, the coins are not decisive upon this point. For some remarks on two other Gaulish names—Epaticus and Eppillus—which appear on British coins, the reader may be referred to Pictot's article in the Rev. Arch. vol. x., N.S., pp. 312, 313.

WARWICE WROTH.

RECENT NUMISMATIC PUBLICATION.

A Gnide to the Coins of Great Britain and Ireland, in Gold, Silver, and Copper, from the Earliest Period to the Present Time, with thoir Value. By Major W. Stewart Thorburn. With Numerous Illustrations. London: L. Upcott Gill, 170, Strand.

This comprehensive and at the same time cheap little work ie well calculated to supply a want often felt hoth hy collectors and casual possessors of coins. What is this coin worth? is a question constantly arising, and, so far as such a question can he answered without the inspection of the coin hy-an expert, Major Thorhnin'e work will furnish the reply. Under the different heads of English, Scottish, and Irish coins, and those of our colonies, lists are given of nearly all the denominations at present known, to which are attached the prices realised for each at the different coin-sales in London and Edinburgh during the last thirty years. So much depends upon the condition of a coin and the particular state of competition for it at the time of its sale, that any scale of prices can only be regarded as approximato; and the great range of pricee specified in this work for different specimens of the same coin, or for different varieties of the pieces of the same denomination and of the same monarch, fully exemplifies the nucertainty of any absoluto valuation. But the general result of an examination of the prices quoted in these lists is to leave a fair impression on the mind of the relative abundance or scarcity of the several coins enumerated. The lists of the Scottish and Irish coins are very full, and supply an amount of information es to value which it would be difficult to find elsewhere. The illustratione vary somowhat in their degree of merit, but on the whole are good. A complete index both to the text and the illustrations adds to the completeness of the work, which we recommend to all British numisuratists, and especially to young collectors.

J. E.

XIII.

THE SANTORIN FIND OF 1821.

In the month of September, 1821, there was discovered in the island of Sautorin (the ancient Thera), a large hoard consisting of seven hundred and sixty Greek eilver coins, of archaic style, probably of the seventh and sixth centuries s.c. A memorendum as to the contents of this hoard was fortunately made at the time hy that careful coin-collector, Mr. H. P. Borrell, and was subsequently published by him in the Numismatic Chronicle for 1843-44 (vol. vi. pago 134; cf. ib. page 47). Though Greek numismetists are not unaware, of course, of the existence of this memorandum, it has happened, owing to the extreme brovity of Mr. Borrell's descriptions and the absence of any accompanying illustrations, that the Santorin find has had hut little attention bestowed upon it. I have, therefore, brought together in the present paper epecimens of all the types of coins which I believe to he indicated in Mr. Borrell's memorendum, giving photographs of them and full descriptions. And I should be glad to think thet numismatists may be induced thereby to offer further suggestions as to the attributions of these coins from Sentorin, and also -what is still more important-thet any collectors who happen to have coins of similer types may be led to stete what they know as to the provenance of their spe-VOL. IV. THIRD SERIES.

cimens. Several coins from the Santorin hoard passed into the Borrell and Payne Knight collections and have now found a resting place in the British Museum. With regard to some of the specimens in my Plate I cannot, indeed, eay positively whether or no they are actually from the hoard, but at any rate they correspond in type and fabric to coins mentioned by Mr. Borrell, and so will serve our purpose of laying once more hefore the numiematist this interesting island-treasure.

Before examining the items of Mr. Borrell's memorandum it will be useful to quote it in its entirety:—

"41 Silver, type half horso; some to the right, others to the left. Rev.—A double indented square; one much larger than the other; in each a large star.

47 Do. half lion. Rev.-Rude square.

1 Do. Do. Rev.-Rude squaro, a star in the centre.

2 Do. large fish's head, and the tail of a fieh ahove. Rev.—Rude indented square.

14 Vase, with bunch of grapes to each handle, and an ivyleaf above. Rev.—Indented square, divided in unequal compartments. Naxue? Mionnet, in his Supple-

ment, gives them to Teos, in Ionia. 8 Dove flying. Sicyon.

1 Cock. Carystus?

1 Boar's head.

82 Do. half eize. Lyttus Creta?

28 Two dolphins. Phidon. See my notice.

2 Goat upon a fish.

1 Plain vase, without handles.

541 Ægina.

1 Head of Silenus. Rev.—Rude indented square. Naxus? (From Mr. Payne Knight's collection, now in the British Museum.)

760 Total."

A. 41 Silver, type half horse; some to the right, others to the left. Rev.—A double indented equare; one much larger than the other; in each a large star.

Several epecimens of these coins (which are of the

weight of Æginetan Didrachms) are in the British Museum. They present two distinct types:—

- 1. Obv.—Forepart of horse r.; hencath it, nncertain letters. Rev.—Star within an incuse square; below it, in a smaller incuse square, star.
 - R. ·8 Wt. 184 grains. Brit. Mns. (from the Borrell coll.) [Pl. XII. No. 1.]

(Similar specimens in Brit. Mus. weigh 183 grs. and 186.3 grs. respectively.)

- Obv.—Fore part of horse l. (apparently no letters beneath).
 Rev.—Floral pattern within an incuse square; helow it, in a smaller incuse square, star.
 - At. '9 Wt. 178 grains. Brit. Mns. (from Borrell coll.). [Pl. XII. No. 2.]

(Cf. a similar specimen photographed in Head, Guide to the Coins of the Ancients, Plate II., No. 20; wt. 181.5 grs. Brit. Mus.: Nun. Chron., 1881, Pl. I. No. 11; wt. 179.5 grs. Brit. Mns.)

The British Museum also possesses a hemi-drachm (A. 55, wt. 43 grains) with types similar to No. 2, but without the smaller incuse square on the reverse. It was formerly in the Payne Knight collection, but does not appear to have occurred in the Santorin heard.

The fact that the coins in the hoard are almost all uninscribed renders their attribution difficult. From the find-spot of the hoard, and from the presence in it of a largo number of Æginetan coins, we must suppose that it contains specimens of the currency of the Ægesn islands, of the Peloponnese, and, possibly, even of northern Greece. Our coins with the half horse do not by their types con-

¹ Einzelne Exemplare dieser; Münzen haben unter dem Pferdetypus eine Aufschrift (scheinbar drei Buchstahen, von denen die letzten heiden—∧P oder—∧1 gelesen werden könnten." Imhoof-Blnmer in Zeit, f Num., vol. iii. p. 276.

nect themselves with any island of the Ægean. They have been attributed to Maronea, to Cyme in Æolis, to Erythræ in Ionia, and (owing to a mistaken reading of Sestini's) to Clazomenæ.2 The fifth century coins of Maronea³ present a resemblance in typo to those now under discussion, though the attribution thus suggested cannot be regarded as certain: the Æolic and Ionian attributions have been well shown by Dr. Imhoof-Blumer. to be, on several grounds, extremely unsatisfactory. At present, indeed, without further knowledge of the provenance of other similar coins, the attribution of theso specimens must be admitted to be little better than guess work.

- B. 47 Half lim. Rev.—Rude square, Half lion. Rev.-Rude square, a star in the centre.
 - 1. Obv.-Fore part of lion, l., looking hack.
 - Rev.-Rudo incuse squaro, quartered and (apparently) divided diagonally.
 - R. '75. Wt. 183.4 grs. Brit. Mus. (from the Payne Knight Coll.). [Pl. XII. No. 8.]

(Another similar in Brit. Mus. from the same collection, weighs 182.9 grains.)

[1.* Obv.-VAO fore part of lion l., looking back. Rev .- Similar to No. 1.

R. 8. Wt. 1855 grs. Brit. Mus. (from the Borrell coll.). Found in Milo. [Pl. XII. No. 4.]]

(A similar specimen in the Brit. Mus., from the Woodhouse collection, weighe 180.8 grains.)

² Cf. Imhoof-Blumer, l. c. p. 276 (notes).

³ Brit. Mns. Catalogue, "Thrace," p. 129, No. 4. The coins helonging to the period hefore the expedition of Darius have obv., fore part of horse; rev., incuse square; see ib., Nos. 1-8.

HE CANTODIN CON

		14	
			<i>:</i>

- 2. Obv. Fore part of lion, 1., looking hack. Rev. - Ornamsatsd star within incuss square.
 - R. 8. Wt. 183.8 grs. Brit. Mus. (from Payas Knight coll.). [Pl. XII. No. 5.]

All these coins, if we judge by the similarity of their fabrie and of their obverse types, must be assigned to the same period; possibly, however, the epecimen with the star for reverse may be somewhat later than the specimens which have only a plain incuse square. Coins with the type of 1° do not seem to have occarred in the Santorin deposit: Mr. Borrell states that some were found in the island of Mile (a few years subsequent to 1821), together with other coins "bearing the same types [as those in the Santorin find, but which] were evidently of more modern date." The inscription on the obverse of 1* ought to give us the key to all the coins in our class: it was read by Mr. Borrell OAY or AYO.5 Possibly, as Professor Percy Gardner has suggested, it is OVA (retrograde, $= \Gamma v \theta$ —), in which case it might be thought to indicate Gythium, the sea-port of Laconia: so far as the types are concerned, Miletus, or better, the Thracian Chersonese (cp. B. M. Cat. Thrace, p. 182, Nos. 1-4) would seem to have the best claim to the coins.

- C. 2 Large fish's head, and the tail of a fish above. Rev.-Rude indented square.
 - 1. Obv .- Head of fish l.; ahove, fish's tail.

Num. Chron., Vol. vi. (O.S.), p. 134.

 ⁴ VΛΟ konnte aach für Ωγυ . . . stehea, die Gammaform A wird auf Münzsn von Gortyaa, Argos a.s. nicht selten gstroffen." Imhoof-Blumer, Z. f. N. III., p. 278 (note 8). The attribution to Olas in Crete proposed by ds Laynes eeems oat of the question.

- Rev.—Rude incuse square (probably intended to be quartered and divided diagonally).
- R. ·8. Wt. 227 grs. Brit. Mns. (from the Borrell coll.).
 [Pl. XII. No. 6.]
- 2. Obv.—Similar. A. . 85. Wt. 216.5 grs. Brit. Mus. (from the Bank of England coll.).
- 8. Similar. A. 8. Wt. 219.5. Brit. Mus. (from the Payne Knight coll. = (?) Cadalvene, Recueil de mêd. greeq., Plate II. 28.

These three coins will serve to represent to us the coins with similar types in the Santorin hoard, though it is not certain they actually come from it. If No. 3 is, as it seems to be, the same coin as Cadulvene's Fig. 23 in Plate II. of his Recueil, it was found (in 1821) in Milo (cp. ib. page 174). With regard to our No. 1, I find from a note in Mr. Borrell's MS. catalogue of his own collection that it too was discovered in Milo. The provenance of No. 2 is not known to me, but possibly it is one of the two coins with fish's head and tail found in Spotorin. There can be little doubt that we have on the obverse of these coins the "complete abridgment" of a fish -its head and tail. The head was thought by De Luynes to be that of a raven, and he attributed a specimen in his collection to Ialysos in Rhodes; the form of the incuse squares of these coins is, howover, quite unlike that of the incuse reverses characteristic of Rhodian coins (cf. e.g., Head, Guide, Pl. III. 30 and 32)6. At present, the find spot of these coins seems rather to point to their being the

⁶ Brandis, Das Münzwesen, &c. p. 479, inserts De Luynes' coin under "Rhodos, Ialysos (Kleinasiatischer Fuss)," but says, "Die Zntheilung ist sehr zweifelhaft, sie rührt von Lnynes her, der in seiner Sammlung die Münze, unter Vergleichung von Müller's Fr. h. Gr. IV. 405 Ialysos beigelegt hat."

eurrency of one of the Cyclades, hut an attribution to Melos itself would perhaps he hazardous.

- D. 14 Vase, with bunch of grapes to each handle, and an ivy-leaf above. Rev.—Indented square, divided into unequal compartments. Naxus? Mionnet in his Supplement, gives them to Teoe, in Ionia.
 - Obv.—Kantharos; from each handle of which a bunch of grapes is suspended; above, an ivy-leaf.

Rev. Incuse square divided into four compartments.

R. '8. Wt. 191 grs. Brit. Mus. (from the Woodhouse Coll.). [Pl. XIL No. 7.]

Cf. Head, Guide, Pl. VI., No. 84, wt. 187 grains (Kantharos wreathed with ivy), and Das Königl Münzkabinet (Berlin), Nos. 9 and 10; without wreath?

These are the well-known coins now generally assigned to the island of Naxos. They usually have the body of the Kantharos wreathed with ivy, but as Mr. Borrell makes no mention of the existence of a wreath on the specimens described in his memorandum, I have thought it better to photograph a piece in the British Musoum which seems to be without the wreath—unless, indeed, that object has merely become obliterated. It would appear, however, from some remarks by Mr. Borrell published in the Num. Chron (vol. v. pp. 177, 178), that one at any rate of the Santorin coins was provided with the ivy-wreath, so that perhaps this may have been the case with all. Coins with the wreathed kantharos occurred in the well-known Myt-Rahineh trouvaille of sixth century Greek money.

- E. 8 Dove flying. Sicyon.
 - 1. Obv.—Eagle flying r.

⁷ Revue numis., 1861, p. 421; Pl. XVIII. 8.

Rev .- Incuse square quartered and divided diagonally.

R. '75. Wt. 196'6 grs. Brit. Mns. (formerly in the Borrell and Payne Knight collections). [Pl. XII. No. 8] = Head, Guids, Pl. VI. No. 36.

Mr. Borrell considered the bird on these coins to be a dove, and supposed them to be "the earliest essays of the Sicyonian coinage" (Num. Chron. vi. (O.S.) p. 132.). But the hird seems rather to be an eagle, and it is more likely that these specimens constituted the earliest money of the wealthy island of Siphnes, preceding the archaic, but not primitive, inscribed coins of that island with, obv., female head, rev. eagle flying.

F. 1 Cock. Carystus?

I have been unable to make out from this description what coin is intended.

G. 1 Boar's head.

Obv.-Boar's head r.

Rev.—Rude incuse square (apparently not divided into compartments).

R. '85. Wt. 223 grs. Brit. Mus. (from the Borrell coll.). [Pl. XII. No. 9.]

This coin is of rudo globular fahric and much resembles the pieces with fish's head and tail (our class C). Like them it is above the right of the Æginetic didrachms in this find.

H. 82 Boar's head, half size. Lyttus Creta?

1. Obv.-Boar's head r.

Rev.-Rude incuse square.

R. 55. Wt. 64.5 grains. Brit. Mus. (from the Borrell coll.). [Pl. XII. No. 10.]

- Similar; incnse square, divided? Fahric somewhat less Inmpy than that of No. 1.
 - At. '65. Wt. 64.4 grains. [Pl. XII. No. 11] = Head, Guide, I. A. 33; Pl. III. No. 33.
- [3. Obv.—Boar's head r.

Rev.-Incuso square.

At. 35. Wt. 7.2 grs. Brit. Mus. (from the Borrell coll.).]

The British Museum possesses several specimens of Nos. 1 and 2. No. 3 evidently belongs to the same class, though it is not, apparently, from the Santorin hoard. Mr. Head in his Guide (loc. cit.) has attributed No. 1 to Lycia, with a query; in the Guide to the Berlin collection,8 on the other hand, two similar specimens are given to Lyttus (in Crsts), on whose coinage a boar's head is a familiar typo. Mons. J. P. Six⁹ also writes strongly in favour of this attribution, and considers the pieces to be thirds of the Æginetan stater. He points out that Baron Prokesoh-Osten obtained ten specimens of this class direct (apparontly) from Crots. It must, however, be borns in mind that similar specimens have been found in Cyprus (Catal. Huber, No. 700), and, as our present find shows, in Thera. Specimens similar to our No. 3 have been found in the island of Seriphos.10

- I. 23 Two Dolphins. Philon.
 - 1. Obv.-Dolphin swimming I.; hensath, a smaller dolphin swimming r.

^{*} Das königl. Münzkabinet, p. 54, Nos. 12, 18 (wt. = 4, 15, and 4, 1 grm.).

In a letter to myself written in July, 1884.

¹⁰ Prokesch-Osten, Nichtbekannte Europ.-griech. Münzen, Pl. III. Nos. 50, 51, under Lyttus. The boar's head on No. 50 has been mistaken for an eaglo's head.

Rev.—Incose square quartered and divided diagonally.

R. 8. Wt. 1898 grs. Brit. Mos. [Pl. XII. No. 12.]

(Other specimens in Brit. Mus. weigh 198.7 grs.; 188.4 grs.: for similar coins of. Das k Münzkabinet, p. 54, No. 7, "Unbestimmt, eine der Inseln der ügöischen Meers;" Cadolvene, Rècueil, Pl. H. No. 24, &c.)

Mr. Borrell (Num. Chron. vol. vi. (O.S.), p. 42 ff.), wos of opinion that these specimens were the coins "minted by the Æginetæ for Phidon, King of Argos." Without going this length, we may admit that the suggestion that these coins formed the earliest currency of Argos seems at least worthy of consideration. Cadalvone thought that these pieces were octually struck in Ægina itself, heing led to take this view by the similarity between the incuse square of the dolphin coins and those of Ægina with the tortoise; and also by the fact that he had procured several specimens of the former from Ægina.

Mr. Borcley Head has further suggested to me that if these coins are of one of the Ægean islands—and their find-spot, so for as it is at present known, would seem to indicate this—they might with probability he essigned to Delos. That island can hardly be supposed at that early period to have been without a currency of its own, and the type of the delphin would be not unsuitable as a symbol of its god Apollo.

- J. 2 Goat upon a fish.
 - Obr.—Goat r., looking back, with r. foreleg bent; beneath, dolphin.
 - Rev. Incose square divided into (6 ?) compartments.
 - R. 85. Wt. 190.1 grs. Brit. Mus. (from the Borrell coll.). [Pl. XII. No. 18.]
 - Another, similar. Wt. 1877 grs. Brit. Mus. = Head, Guide, I. B. 85; Plate VI. 85. "Parcs."

The attribution of these coins to Paros seems a probable one.

K. 1. Plain vase, without handles.

Obv. -- Amphora.

Rev. -- Incuse square, quartered and divided diagonally.

R. 8. Wt. 184.2 grs. Brit. Mns. [Pl. XII. No. 14.]

(Another similar specimeu in Brit. Mns. weighs 186.2 grs.).

It is perhaps one of these coins of Carthæa in Cees that is intended by Mr. Borrell, though the vaso certainly has small handles.

L. 541 Ægina.

These were apparently all didrachus. Mr. Borrell has not described the form of the incuse square on the reverse of the specimens, and we cannot be certain, therefore, whether the reverse had the square quartered and divided diagonally, as is the case with the coin in our Plate XII. No. 15 (wt. 192 grs., Brit. Mus.), or whether it consisted of five triangular sinkings (as on Pl. XII. No. 16, wt. 185.2 grains. Brit. Mus.); or whether, again, the find included specimens of both these classes. The British Museum obtained many of its early Æginetan Didrachms from the Borrell collection, all of which, I find, have the five (or four) triangular sinkings for reverse. It would, however, be somewhat hazardous to infer from this circumstance that none of the class with the quartered and diagonally divided square occurred in the find.

[&]quot;I gather this from some observations appended to Borrell's memorandum (Num. Chron. l. c.)—"All the coins of the Santorina deposit, excepting the 82 small with the boar's head, agree pretty nearly with each other in weight, which shows them to have been adjusted to the Æginetan standard, of which they must have been didrachms."

- M. 1 Head of Silenus. Rev.—Rude indented square. Naxus? (From Mr. Payne Knight's collection, now in the British Museum.)
 - Obv.—Head of Satyr r. with pointed beard and long pointed car.
 - Rev.—Rude incuse square (quartered and divided diagonally?).
 - Al. '85. Wt. 211'5 grs. Brit. Mus. (from Payne Knight coll.). [Pl. XII. No. 17] = Gardner, Types, Pl. III. 19. Naxos?

WARWICK WROTH.

XIV.

SEVENTEENTH CENTURY TOKENS IN THE BRITISH MUSEUM, NOT DESCRIBED IN BOYNE'S WORK.

THE British Museum collection of English Tradesmen's Tokens of the Seventeenth Century has been hitherto arranged alphabetically under the names of the issuers; as, however, this arrangement has proved, especially of late, to be inconvenient to collectors who wish to consult readily the tokens of some particular county or town, it was determined by the Keeper of Coins to re-arrange the whole collection in geographical order, under counties and In earrying out this duty we have compared localities. every specimen with the descriptions in Boyne's Tokens issued in the Seventeenth Century, and have noted in the following list all such specimens as are not to be found in that work, or which constitute varieties of tokens there published. Although some of the tokens included in our list may have been described by local collectors in publications subsequent to Boync, we have considered it advisable to publish all the British Museum tokens not mentioned by Boyne, in order that our list may form, so far at least as the National Collection is concerned, a complete supplement to his well-known work. don Tokens in the Museum are not here referred to, as they were arranged under "streets" many years ago by Mr. A. W. Franks, who published in the Num. Chron.

(N.S. II. pp. 81-103) all the specimens not described by Boyne.

C. F. KEARY. WARWICK WROTH.

LIST OF TOKENS.

The asterisk (*) denotes that the Token is quite new to Boyne; specimens without the asterisk are varieties of Boyne.

¹ This rare loaden token was purchased in 1880 from Mr. Webster, the coin dealer, and bears every mark of genuineness. Though not of the seventeenth century, it is here insorted and reproduced on account of its interest as the forerunner of the Town-pieces of that century. It is known that Elizabeth granted a license to the city of Bristol to issue Farthing Tokens in copper, and Ruding (Annals, i. 848) conjectures that this took place soon after the year 1574, though the exact date is unascertained. Possibly, however, the official issue of Bristol Tokens did not take place till a later period, for our specimen, which seems to be the pattern of a Town-piece put forth by anthority, bears the date 1591. In May, 1594, an order was sent to the Mayor and Aldermon of Bristol to call in all the private tokens which had been stamped and attered by divers persons within that city without any manner of authority (Ruding, Ann. ii., p. 218).

MISCELLANEA.

DATA FOR MAKING ALLOWANCES IN WEIGHT FOR CORROSION OF METALS.—Compounds of metal met with, alone or alloyed:—

	Specific Gravity (a).	Fraction of Specific Gravity of the Metal.	Weight of Metal in the Compound.	Weight of gain in the Com- pound.
Chloride of silver (nsnal)				
AgCl	5.55	•53	·758	$\cdot 247$
Sulphido of silver, AgS.	7.2	-69	·871	129
Black oxide of copper,				
CuO	6.5	.73	.799	.201
Red oxide of copper, Cu,O	5.75	.64	888	.112
	-			
Sulphide of copper, Cu,S	5.8	.65	-799	·201
Green carbonate of cop-				
per, CuO, H ₂ O,Cu, CO ₂	3.8	•42	575	•425
Blue carbonate of copper,				
CuO, H,O, 2 Cu, CO,	8.8	.42	•555	.445
Oxide of tin, SnO	6.95	.95	.787	.218
Carbonate of lead (nsnal)	*			
Pb CO,	6.46	•56	.774	.226
	_			
Sulphate of lead, Pb SO.	6.80	.55	.736	.264
Sulphide of zinc, ZnS .	4.1	•60	670	•330
Carbonate of zinc, ZnCO,	4.4	•64	•520	•480

Let P = per cent. of rolume remaining metallic; p = per cent. of compound in the whole volume. S = sp. gr. of metal; s = sp. gr. of compound; g = gain of compound.

Then $\frac{ps}{ps+ps}$ of the present weight is compound, and

 $\frac{p \cdot g}{P \cdot S + p \cdot g}$ is the gain of the whole weight, to be deducted from present weight.

E.g., a piece of copper, eight-tenths metal, one-tenth rod

oxide, one-tenth green carbonate.

Then $\frac{(10 \times 5.7 \times .112) + (10 \times 3.8 \times .425)}{(80 \times 8.9) + (10 \times 5.7) + (10 \times 3.8)}$ per cont.

of the weight is gain = 2.77 per cent., or 10 grains in 860.

Roughly it is sufficient for small percentages to work the above example thus:—

10 per cent. volume oxide = about 6.4 per cent. of weight, gain .7 per cent.

10 per cent. volume carbonate = about 4.2 per cent. of weight, gain 1.8 per cent.

(Total gain 2.5 per cent., which is probably as near as the volumes can he estimated.)

Observe the gain hy carbonate of lime or eand encrusted. It is equal to about one-third of its volume of metal in weight.

Observe the lossee hy solution of carbonate of lead, or hy scraping.

WM. FLINDERS PETRIE.

Find of Roman Coins in Willis.—The following is a short description of a small find of Roman Imperial silver coins which were recently dug up on Manton Downs, near Marlhorough, Wilts, very close to the spot where a number of pewter dishee (twelve) and other articles of Roman manufacture were discovered a day or two later.

The silver coins wora all found close together. Several of them have been so clipped or curtailed in size, that the legends and mint marks have almost or entirely disappeared; otherwise they are in very good preservation. Some hardly at all worn.

Ahent the same spot have been lately found fifteen or more 3rd-brass coins of different emperors, from Cornelia Salonina to Gratianus.

1 Julian. Obv.—Bearded head to right.

Rer.—Female figure seated to left, left log hare, in right hand a globe. VIRTVS ROMANORVM.

1 Jovian. Obv .- Hoad to right.

VOTIS
Rev.—MVLTIS in wreath.

5 Valens. Obv .- Head to right.

Rev.—Female figure seated to left, in right hand a globe, on it a Victoriola presenting a crown; in left a spear. VRBS ROMA.

3 Maguus Maximus. Rev.—Same as Julian. TRPS in exergue.

4 Flavius Victor. Obv.—Head to right. DN . FL . VICTOR P. F. AVG.

Rev.-Same as Julian. MDPS in exergue.

7 Arcadius. Obv.-Head to right.

Rev.—Female figure seated to left; in right hand a globe, on it a Victoriola presenting a crown or wreath; in left a spear barbed. VRBS ROMA on one, LVGD in exergue, VIRTVS ROMANORVM on six, two MDPS, one TRPS in exergue.

5 Honorius. Rev.—Female figure on throne, lsft leg bare.
VIRTVS ROMANORVM. One MDPS,
one TRPS in exergue.

C. SOAMES.

Saxon Coins found on the Site of Waterloo Bridge, London,—Whilst workmen were excavating foundations for the present Waterloo Bridge, a small board of silver pennies was discovered, which on examination proved to belong exclusively to the reigns of Burgred, King of Mercia, and Æthelred I., King of Wessex. I have been nnable to obtain exact information as to the number of coins in the find, but ont of about one bundred specimens which I examined, the following varieties of moneyers' names and types were amongst the number. There was only one coin of Æthelred I. Of Burgred's coins there were twelve specimens of Hawkins' type 1, four of type 2, and about eighty of type 3. There were no specimens of type 4.

BVRGRED.

ÆTHELRED r. Hawkins, type 2.

BERNEAF.

NATHAN HETWOOD.

HALFPENNY OF EARRED.—It is narrated in Hawkins (1876 ed.), p. 142, that at the sale of Captain Murchison's coins in 1866 there was a coin described as a unique halfpenny of Eadred, reading on the reverse BIORHTYLF MO in two lines, divided by three crosses, which was found at Tewkeshnry, and was sold for £9 9s., but that it does not appear into whose hands it fell. Hore Mr. Kenyon, the author of the work in question, soems, as he does also in his recent book on Gold Coins, to be entirely oblivions of the existence of marked catalogues of sales of celebrated collections, a reference to which is indispensable to any one who would treat accurately of individual rarities. Such a reference in the present case would have shown that the coin mentioned was purchased by the late Rev. Mr. Shepherd, in whose collection, preserved to this day by his family, it still probably is.

I possess what is undoubtedly the half of a halfpenny of Eadred, the original coin having apparently been hisected for the purpose of creating two farthings in the same way as pennies were often cut up into halfpennies. The weight of my piece is 4‡ grains, and this would be about the proper weight.

This coin differs from that before described. The inscription on the reverse is divided by a cross between two annulets, and the monoyor's name is necessarily imperfect, but terminates in AF, followed as before by MO, beneath which is a resette of dots.

H. MONTAGU.

THE MUSEUM OF GÖTEBORG.—The museum of Götehorg has recently acquired, chiefly through the liberality of one of the citizens of that place, Mr. J. W. Wilson, a large collection of

medals formed by Herr J. F. H. Oldenberg. A large number of duplicates were thus made in the museum collection and were offered for sale on the 20th September of the present year. Kammerherr Magnus Lagerherg, the keeper of the coins in the museum, has taken the opportunity to reprint, in an edition of one hundred copies only, the sale catalogue which he had propared, and to preface it with a short history of the formation of the collection, and a list of the subscribers to the fund which was raised for the purchase of the Oldenherg medals. Those subscriptions range from Mr. Wilson's donation of 30,000 kronor to the sum of 1 öre, considerably loss than the scriptural mite. Among the donors to which the muscum has been indehted in former years the name of Mr. Dickson is conspicuous by the gift of 80,000 kronor (nearly £5,000). Every one who has visited the Götehorg museum must have been struck by the excollence of its collections, and it is highly creditable to the town that this should he due solely to the liberality of its citizens and the energy of its keeper.

C. F. K.

NOTICES OF RECENT NUMISMATIC PUBLICATIONS.

Les Monnaies royales de France sous la race Carlovingienne. Par E. Gariel. Strashourg: G. Jischbach. 1883.

The lamented death of M. E. Gariel deprives us of the present hope of seeing the completion of the work he had so well begun. We are therefore compelled to review a fragment only of his Monnaies royales de France sous la race Carlovingienne. The foretaste is so excellent, that it must double our regrets for the untimely loss of the anthor. It is to ho hoped, however, that the work will not be left permanently unfinished, hut will be taken up by some other hand. It is indeed inconcsivable that so large a gap in French numismatic history should be left longer unfilled or inadsquately filled; and we may hope that German numismatists will be inspirited to supply the corresponding material for the region heyond the Rhine. Let us consider how we stand in respect to the numismatics of mediaval Europe. We have yet no locus clussicus for the Merovingian money, though an immense amount of material has been supplied in the pages of the Revue Numismutique and other publications. Then comes the great lacuna made by the Carlovingian system, which is very imperfectly described in the papers which have from time to time appeared in different

numismatic journals, excellent as some of these papers (and notably M. Rohert's Studies) must be pronounced to be. M. Hoffmann's work upon the Monnaies royales de France (subsequent to Hugues Capet) again brings ne into the light of day, and M. Poey d'Avant's Monnaies feodales is a still more valuable monnment of industry and research. Beyond the Rhine clear daylight begins with the fall of the Carlovingian and the rise of the Saxon emperors, when Herr Danneuberg once more takes us in hand, and from that time forward the numerous memoirs on the local coinages of Germany supply information which, though very difficult to gather, leaves no large spaces unfilled. It will be seen, then, that in all the field of middle-age numismatics there is no class of coins which has been more neglected than the coinage of the Carlovingian

emperors.

The difficulties which heret the study account for this neglect. As M. Gariel says, "We are too frequently left without any written documents to he able to proceed with enre steps. . . . It sometimes even happens that this documentary evidence is contradicted by evidence which comes from other quarters; " and it is not overybody who could add, "De là l'attrait que présente cette étude où, à chaque pas, ee rencontre un problème à resondre." The period over which onr anthors etudics extend ie perbaps, as he says, the most interesting of Freuch history, for it is the period during which the fusion hetween the two races, the Franks and the Gauls, hecomes complete. The rivalry ends by imposing upon the latter the Germanic form of government, which was the basis of what we call the fendal system. In all the four great states of Western Christendom—as Bishop Stubbs has said—"the constructive elements of new life are barbariau or Germanio." It is the trimph of this Germanic system under the Carlovingians—the Merovingian period having been transitional only -which, as I have myself elsewhere observed, is symbolised hy the establishment of the silver Carlovingian denarius in place of the older currency, which was chiefly of gold: the greatest revolution in the coinage that Europe has ever known. Not that even this revolution was quite so sudden as it appears to be at the first glance. M. Gariel shows that for half a century or more before the House of Heristal rose to power, a silver Merovingian coinage had been on the incresse in Northern France, and had hy this time as large a currency as the gold. Neverthelese the disappearance of the latter metal, the entire remodelling of the silver coin, form changes the importance of which it would be hard to over-estimate.

The present instalment of M. Gariel's work contains tho description of thirty-nine deposits containing coins of the Carlovingian emperors. This was a portion of the rough material of his work out of which he was to have settled the historical sequence and the geographical position of the Carlovingian money, and failing his further guidence the numismatist can to some extent do this for himself. It will be interesting to the students of English coins to learn that M. Gariel, while acknowledging that the general suffrage seems to be in favour of an English origin for the coins found at Cucrdele, is not for his part convinced "que plusionrs monnaies, ontre cellss de Quentovic, n'aient pas été émises en France par cee rois piretes et notamment par le famenx Sigefroi de 885 à 886 " (p. 187). The same view, it may be remembered, was edvocated by M. Bergsöe in the pages of this Chronicle. One highly usoful and most interesting feature in this volume is the transcription made by M. Do Barthélemy of all the passages in the capitularies and edicts of the Carlovingian ago which relate to the money. Of these the Capitalary of Vernon and the Edict of Pitres are among the most important and the most familiar to the unmismetiet.

C. F. K.

The Copper, Tin, and Bronze Coinage, and Patterns for Coins of England, from the reign of Elizabeth to that of her present Rollin and Fenardent, 1885. Majesty. By H. Montagn.

This most useful work is founded on that which was undertaken some years ago by the lete Rev. H. Christmas, which, though passed through the prese, was nover, in fact, published, and the blocke for which are, with several additions, here reproduced. It is, however, a far more complete and careful treetise than that of Mr. Christmee, and contains much new and valuable matter. Beginning with an introductory chapter, the coine of each reign are passed enccessively in review, and notes aro given of the rarity of each. The description of the various pattorn-piecee is exhaustive, and perhaps constitutes the most valuable part of the work. The riches of the author's cebinet, end those of Mr. Brice, Mr. Hohlyn, and others, have here rendered good eervice; hnt as a guide to our regular coinage in the baser metals, this work will be a necessity to all collectors, and must for many years remein the standard anthority. We commend it heertily to our readors.

THE END.

PROCEEDINGS OF THE NUMISMATIC SOCIETY.

SESSION 1889-1884.

OCTOBER 18, 1883.

JOHN EVANS, Esq., D.C.L., F.R.S., President, in the Chair.

The following presents were announced and laid upon the table:---

- 1. Numismatio Atlas for Canada, by Joseph Lo Roux, M.D. From the Author.
- 2. Sitzungs-herichte der K. Preussischen Akademie der Wissonechaften zn Berlin, 1883. Parts I.—XXXVII. From the Academy.
- The Journal of Hellenio Studios, vol. iv. No. 1, 1888.
 Text and Plates. From the Society.
- 4. The Journal of the Royal Historical and Archmological Association of Ircland, Ser. iv. vol. vi. April, 1883. From the Association.
- 5. The Transactions of the Royal Irish Academy, October and November, 1832, and January to June, 1883, and Proceedings December, 1882, and January to June, 1888. From the Academy.
- 6. The Journal of the Royal Asiatic Society, N.S., vol. xv. Part III. From the Society.
- 7. Proceedings of the Society of Antiquaries of London, Series II., vol. ix., Nos. 1 and 2. From the Society.

- Revue Belge de Numismatique. 8^{ms} and 4^{me} livraisons,
 1883. From the Belgian Numismatic Society.
- Mémoires de la Société des Antiquaires de la Morinie, vol. xviii., 1882—8, and Bulletin Historique, 126²⁰⁰ livraison. From the Society.
- 10. Zeitschrift für Numismatik, Band xi., Heft 1, 1883. From the Editor.
- 11. The Canadian Antiquarian and Numismatic Journal, 1883. From the Society.
- 12. Bulletin do la Société des Antiquaires de l'Ouest, 1882, Part IV., and 1883, Part I. From the Society.
- 13. Annuaire de la Société française de Numismatique et d'Archéologie, 1883, Parts III. and IV. From the Society.
- 14. Ein Verzeichniss von Griechischen falschen Münzen, hy Dr. J. Friedlaender. From the Author.
- 15. Coins of the Benee Rasool dynasty of South Arabia, by Liout. Col. Prideaux. From the Author.
- 16. A Guide to the Identification and Valuation of British Coins, Parts I.—III. By Major Stowart Thorhurn. From the Puhlisher, Mr. L. Upcott Gill.
- 17. Constitution and By-Laws of the Numismatic and Antiquarian Society of Philadelphia, 1883. From the Society.
- 18. A bronze medal by Wiener, commemorating the visit of the Queen to Epping Forest, in May, 1882. From the Corporation of the City of London.
- Mr. J. G. Hall exhibited a "saluto d'oro" of Charles II. of Anjou, King of Naples, A.D. 1285—1809, which may have eerved as the prototype of the "salute" of Henry V. and VI. of England.
- Mr. H. Montagu read a paper on a unique coin of William I. in his poseession, having the type of the reverse similar to coins of Harold II., viz. the word PAX written across the field. See vol. iv. p. 59.
- Dr. A. Smith communicated a paper on some Saxon coine found in Ireland, struck during the reigne of Eadweard the

Elder and Æthelstan. The coins of Æthelstan in this hourd contributed four additional names to that king's moneyers. Soe vol. iii. p. 282.

Mr. E. H. Bunhury communicated a paper on some "cistophori" of Ephesus, Parinm, Pergamum, Sardis, &c., in which he described forty-five hitherto unpublished varieties of these coins. See vol. iii. p. 181.

A paper was read by Mr. Wroth on coins of Isauria and Lycaonia, heing pieces not mentioned by M. Waddington in his article on those coins published in the Revue Numismatique (1883). This is printed in vol. iii. p. 177.

NOVEMBER 15, 1888.

JOHN EVANS, Esq., D.C.L., F.R.S., President, in the Chair.

Messrs. Francis Bigge and Walter R. Huhbard were elected members of the Society.

The following presents were announced and laid upon the table:-

- 1. Zeitschrift für Numismatik, Band xi., Heft 2, 1888. From the Editor.
- 2. Sur la prétendue restauration du ponvoir de Manrice Tihère dans la province, par M. P. Ch. Rohert. From the Author.
 - 3. Notice sur M. do Saulcy. From the same.
- 4. Notes on a list of silver coins of Aurangzeh. By C. J. Rodgers, Esq. From the Author.
- Coins supplementary to Thomas's Chronicles of the Pathan Kings of Delhi, No. 3. By C. J. Rodgers, Esq. From the Anthor.

- The rupees of the months of the Ilabi years of Akbar.
 By C. J. Rodgers, Esq. From the Author.
- Mémoires de la Société royale des Antiquaires du Nord,
 N.S., 1882—4. From the Society.
- 8. Bulletin Historique de la Société des Antiquaires de la Morinie. July—September, 1883. From the Sociéty.
- 9. Annual Report of the Smithsonian Institution for 1881. From the Institution.

Mr. Evans exhibited a portion of a hoard of clippings from English silver coins dating from the time of Elizabeth to that of Charles I. These clippings Mr. Evans thought were made shortly hefore the recoinage of 1696, about which time vast numbers of old coine must have been in circulation, the large dimensions of many of which would naturally offer temptations for clipping. The heard was found near Frome.

- Mr. J. W. Trist exhibited a specimen of the tetradrachm of Æsillas, quæstor in Macedon in the early part of the first century s.c., having the letter B hehind the head on the obverse, and differing from all the specimens in Head's Catalogue of Greek Coins: Macedonia.
- Mr. G. D. Brown exhibited a gold coin of Grispus Casar, rev. Victory, struck at Sirmium; and a gold coin of Cunobelino eimilar to Evans, "Ancient British Coins," pl. ix. 3.

Mr. H. Montagu brought for exhibition the following coins: a penny of Harthacnut struck at Dorchester, reading GODPINE ON DORCE, Dorchester heing a mint hitherto unknown on the money of Harthacnut; a Piedfort half-great of Edward III.; a Tower crown of Charles. I., m.m. Lis, a new variety, with a plume over the shield on the reverso; an unpublished Commonwealth half-crown hy Ramage with uninscribed edge; a gold proof of the shilling of George III., 1816; and a five-shilling token of Bishop, de Jersey and Co., stamped over a Spanish dollar of Charles IV.

Canon Pownall exhibited four Papal medals (three of Paul II. and one of Sixtus IV.). One of those of Paul II. represented

the consistory in which George Podishrad, King of Bohemia, was declared to be deprived of his crown for favouring the Hussites.

Dr. Frazer also exhibited two Papal medals, one of Panl II. and one of Sixtns IV.

The Baron L. de Hirsch communicated a paper on some unique and inedited Sicilian coins in his own collection, the most remarkable among them being a tetradrachm of Ætna etruck between B.C. 476 and 461, and one of Zancle. See vol. iii, p. 165.

Mr. B. V. Head exhibited an autotype plate of the Baron de Hirsch's coins, and contributed some further remarks on the coins of Ætna and Zancls. Vol. iii. p. 171.

Mr. Evans read a eccond notice of some Roman coins discovered in Lime Street, London. See vol. iii. p. 278.

DECEMBER 20, 1883.

JOHN EVANS, Eeq., D.C.L., F.R.S., President, in the Chair.

Mr. Richard Hoe-Lawrenco, Dr. Hermann Weber, and Mous. A. M. E. Lagerberg were elected members of the Society.

The following presents were announced and laid upon the table:--

- 1. Journal of the Royal Asiatic Society, vol. xv. Part IV. From the Society.
- Proceedings of the Society of Antiquaries of Scotland, vol. iv., N.S., 1882. From the Society.
- Bulletin mensuel de Numismatiquo et d'Archéologie,
 3^{me} annés, Nos. 1—4, 1888. From the Editor.
- 4. Bulletin de la Seciété des Antiquaires de l'Ouest, 2^{me} trimestre, 1883. From the Society.

- 5. On a heard of Roman coins discovered in Cobham Park. By C. Roach Smith, Esq., F.S.A. From the Author.
- On Roman tesselated pavements. By C. Roach Smith, Esq., F.S.A. From the Anthor.
- Mr. T. Bliss exhibited a selection of Roman denarii from the Lime Street hoard. The most remarkable among them was one of Gordianus Africanus. Mr. Bliss also showed a lump of the coins rusted together in the condition in which they were found, and a gold ring discovered with them.
- Mr. J. W. Trist brought for exhibition a Greek kylix with a representation of a tetradrachm of Syracuse in the centre.
- Mr. G. D. Brown exhibited a penny of Ethelbert with DVDDA MONETA on the reverse.
- Mr. J. G. Hall exhibited a gold St. Andrew of Robert III. of Scotland.

Mr. Krumbholz exhibited a selection of historical thalers of South Germany (Bavaria, Würtemberg, and Baden), and made some remarks, in the course of which he contrasted the extreme poverty of design and utter absence of beauty of the English shilling of Queen Victoria with the artistic and historically interesting reverse types of the South German silver coins by the well-known artist Voigt, who took the Roman coinage as his model.

- Mr. H. Montagu exhibited a set of silver proofs of the coinage of Queen Victoria, including the penny and halfpenny of 1841, the farthing of 1869, and the penny, halfpenny, and farthing of 1861; also a nickel proof of the halfpenny of 1868, and nickel patterns of the twopence, penny, and halfpenny of 1859.
- Mr. T. W. Greene communicated a paper on the medallion of Philihert the Fair of Savoy and Margaret of Austria. See vol. iii. p. 288.
- Mr. B. V. Head read a paper by Mr. W. J. Andrew on a Saxon coin attributed by him to Ethered, Archbishop of Cauterbury, A.D. 871-891.

A discussion followed, in which Mr. Evans expressed his opinion that the coin was in all probability an imitation of a penny of Alfred the Great, of which so many were present in the Cherdalo hoard.

JANUARY 17, 1884.

JOHN EVANS, Esq., D.C.L., F.R.S., President, in the Chair.

J. D. Leader, Esq., F.S.A., and Major W. Stowart Thorburn were elected members of the Society.

The following presents were announced and laid upon the table:-

- Smithsonian Miscellaneons Collections, vols. i., ii., v., xiii.
 —xxi. Smithsonian Reports, 1854, 1857, 1863, 1866, 1869, 1870. From the Smithsonian Institution.
- 2. Archeologia Æliana, vols. iii., iv., and N.S. vols. i.—ix. From the Society of Antiquarios of Newcastle-on-Tyne.
- 8. Foroningen til Norske Fortidsmindesmerkers Bovaring, Proceedings for 1882; and Kunst og Haandverk fra Norges Fortid. Part III., pl. xii.—xvii., and pp. 3—10. From the Society.
- 4. Report of the Council of the Art Union of London, 1888. From the Art Union.
- 5. Jonrual of the Royal Historical and Archmological Association of Ireland, vol. vi., 4th series, No. 55. From the Association.
- 6. Revue Belge de Numismatique, 1884, Part I. From the Belgian Numismatic Society.
- 7. The Journal of the Royal Asiatic Society of Great Britain and Ireland, N.S. vol. xvi., Part I. From the Society.
- 8. Medals hy G. Cavino, the Paduan. By R. Hoe Lawrence, Esq. From the Anthor.
 - Mr. H. Montagu exhibited a Saxon or Dano-Saxon penny

with a hlundered legend, probably copied from a coin of the Canterbury mint of the time of Alfred the Great, similar to that described at the last meeting (on the reverse was the moneyer's name, BRVNED MO); also two patterns for crowns of Charles I. signed hy Nicholas Briot, reading HAVD VLLI VETERVM VIRTVIE SECVNDVS. One piece had the king's bust on the chverse and the king on horseback on the reverse; the other had the obverse the same as the reverse of the preceding, and the four shields of England, Ireland, and Scotland arranged crosswise on the reverse. This pattern crown perhaps exhibits the first instance on coins of a reverse type which on the coinage of subsequent reigns became very common. It occurs, however, on a medalet of Charles I. as early as 1680.

Mr. J. G. Hall exhibited a sovereign of Elizaheth with the annulet mint-mark, which is supposed to stand for the numeral 0, indicating the year 1600, the pieces of 1601 and 1602 bearing in the same place the figures 1 and 2 respectively.

Mr. W. W. Wroth read a paper on the coinage of Creto. See vol. iv. p. 1.

FEBRUARY 21, 1884.

JOHN EVANS, Esq., D.C.L., F.R.S., President, in the Chair.

The following presents were announced and laid npon the table:—

- 1. Proceedings of the Society of Antiquaries of Scotland, 1881-1882. From the Society.
- Annuaire de Numismatique, 1889. 4^{ms} trimestre. From the Society.
- Zeitschrift für Numismatik, Band xi., Heft 3. From the Editor.
- Mémoires de la Société des Antiquaires de l'Onest. Tome v. Ser. 3, 1882. From the Society.

- 5. Table des Bulletins et Mémoires publiés par la Société des Antiquaires de la Morinie. Par M. E. Dramard. From the Society.
- 6. Bulletin Historique de la Société des Antiquaires de la Morinie. N.S., 128^{me} livr., Oct.—Dec., 1883. From the Society.
- 7. Recherches sur la Numismatique de la Novempopulanie. Par E. Taillehois. From C. Roach Smith, Esq., F.S.A.
- 8. Proceedings of the American Numismatic and Antiquarian Society of New York. March, 1888. From the Society.
- 9. The Journal of Hellenic Studies. Vol. iv., No. 2. Text and plates. From the Society.
- Mr. G. D. Brown exhibited three pale gold staters of the kings of Bosporus: one of Sanromates III., with the head of Hadrian on the obverse and his own head on the reverse; and two of Eupator, one with the head of Antonians Pins and one with those of M. Aurelius and Verus on the obverse.

The Rev. G. F. Crowther exhibited a three-halfpenny piece of Elizabeth with the portcullis mint-mark, and a half-groat of James I. with the key mint-mark.

Mr. Krumbholz exhibited a very rare thaler of Carl Caspar, Elector of Treves 1652—1676, with his portrait.

Mr. T. Mackenzie communicated a notice of a collection of greats of Rohert III. of Scotland, comprising thirteen of the Aberdeen mint, twenty of that of Perth, and sixty-three of that of Edinhurgh, and sent specimens for exhibition. See vol. iv. p. 189.

The Rev. C. Soames contributed a description of a small find of Roman imperial silver coins which were recently dug up at Manton Down, Marlborough, near the spot where twelve pewter dishes and other articles of Roman manufacture were discovered a few days later. The coins were of the Emperors Julian, Jovian, Valens, Magnus Maximus, Flavius Victor, Arcadius, and Honorius.

Mr. B. V. Head read a paper, hy Mr. R. S. Poole, on

Athenian coin-engravers in Italy, and the influence of their echool, as exemplified by the mouey of Terina, Thurium, and other cities of Lower Italy, duting from about B.C. 400. See vol. iii. p. 269.

March 20, 1884.

JOHN EVANS, Esq., D.C.L., F.R.S., President, in the Chair.

M. Longworth Dames, Esq., was elected a member of the Society.

The following presents were announced and laid upon the table:-

- Archæologia Cantiana. Vol. xv. From the Kent Archæclogical Society.
- Sitzungsberichte der K. Preussischen Akudemie der Wissenschaften zu Berlin. Parts XXXVIII.—LIII., with Index 1888.
 From the Academy.
- Bulletin Mensuel de Numismatiquo et d'Archéologie. By
 M. R. Serrure. From the Editor.
- 4. A Guide to the Identification and Valuation of British Coins. Part VIII. From the Publishers.
- 5. Token Money. By John Evans, Esq., D.C.L. From the Author.

The following coine were exhibited at the meeting:—By Mr. Durlacher, a penny of Edward the Confessor, having on the reverse a long double cross terminating in small crescents, with the moneyer's name THORCETL. O. LVND; by Mr. Trist, an obol of Demetrius, King of Bactria, Obv. head of the king in elephant's skin head-dress, Rev. Heracles crowning himself; hy Mr. Brown, a British gold coin of Cunobelinue, eimilar to Evans, Pl. IX., 2, but showing the heart-shaped ornaments in the corners and the termination of the five-fold wreath; by Mr. Montagn, a gold coin of the British Prince Vosilos or Vosil-

launos, of the Kentish district, reading VOSII; and hy Mr. Bliss, a penny of Burgred and eleven varieties of the penny of Alfred the Great, five of which had the moneyer's name TILE-VINE, with the London monogram.

Canon Pownall, F.S.A., read a paper, "On the medals of the Popes Paul II. and Sixtns IV." See vol. iv. p. 160.

APRIL 17, 1884.

W. S. W. VAUX, Esq., M.A., F.R.S., Vice-Prosident, in the Chair.

The Hon. J. Leicester-Warren, the Baron Lucion de Hirsch, and Messrs. R. Thornton Andrews, Walter Davis, T. W. Kitt, and C. H. Nash, were elected members of the Society.

The following prosents were announced and laid npon the table:--

- 1. Annuaire de Numismatique, 1884. 1^{re} trimestre. From the Society.
- Aarhöger for Nordisk Oldkyndighed og Historie, 1883, Parts II.—IV., with Supplement. From the Society of Northern Antiquaries.
- Proceedings of the Society of Antiquaries of Scotland.
 Vol. v., N.S., 1882—1893. From the Society.
- 4. Archeologia Æliana. N.S., Part XXVI., vol. ix. From the Society of Antiquaries of Newcastle-on-Tyne.
- 5. Views of Old Castles, Priories, Monasteries, &c., in the counties of Northnmberland and Durham. Drawn and engraved by S. and N. Buck, originally published in 1728. From the same.
- Remnants of Old Newcastle-on-Tyne, 1884. Part I., with a View of Newcastle in 1745. From the same.
- 7. Journal of the Royal Historical and Archeological Association of Ireland. Vol. vi., 4th Series, No. 56. From the Association.

- Bulletin de la Société de Borda (Dax), 9^{me} année. 1^{re} trimestre, 1884. From the Society.
- Bibliographie générale et raisonnée de la Numismatique Belge. Par Georgee Comont. Bruxelles, 1883. From the Author.
 - 10. Revue Belge do Numiematique, 1884. From the Society.
- 11. The Hall Coinage. By C. E. Fewster, Esq. From the Author.
- 12. Bulletin Historique de la Société des Antiquaires de la Morinie; 81° année, N.S., 129^{ms} livraison, 1884. From the Society.
- 13. Photographic reproductions of the Ten Plates of Hildebrand'e Anglo-Saxon coins. 1et edition. From G. C. Williamson, Esq.
- Mr. Vanx exhibited, on behalf of Mr. H. Rivett-Carnac, a gold coin of the Gupta dynasty, baving on the obverse a divinity standing between two female figures and the inscription "Knmāra Gupta," and on the reverse Lakhsmi on the lotne throne.

Mr. Burstal exhibited three pennies of Æthelred II., struck reepectively at Dover, Winchester, and Colchester; a penny of Cnnt struck at Norwich; one of Harold I. at Shrewebury; and a blundered coin, apparently of Harthacnnt, struck at Leicester.

Mr. Montagu exhibited a half-crown, believed to be unique, of the Commonwealth, dated 1655, and two specimens of the shilling of 1657.

Mr. J. G. Hall exhibited large silver pieces of Odoardo Farnese, Duke of Parms, 1622—1646, and of Leopold I., Emperor of Germany, 1658—1705, having on the reverse a bast of the Sultan Mahomet IV. and the legend MAHVMET IV. VICTVS TVRC. CAES.; also a gold noble of Philip II. or III., Count of Flanders, and a Japanese gold coin imitated from a Chinese coin of the Ming dynasty, cast in the beginning of the last century.

Mr. B. V. Head read an abstract of a paper by M. J. P. Six,

of Amsterdam, "On the Coinage of the Satrap Mazaios." See vol. iv. p. 97.

MAY 15, 1884.

JOHN EVANS, Esq., D.C.L., F.R.S., President, in the Chair.

Messrs. Joseph Clarko and W. Webstor, junior, were elected memhers of the Society.

The following presents were announced and laid upon the table:-

- 1. Bulletino dell' Instituto di Corrispondenza Archeologica, Nos. 5—12, 1883, and 1—4, 1884. From the Imperial German Archeological Instituto at Rome.
- 2. Archaelogia Æliana. Part XXVII. From the Society of Antiquaries of Newcastle-on-Tyne.
- Proceedings of the Davenport Academy of Natural Sciences.
 Vol. iii., Part III., 1879—1881. From the Academy.
- 4. Report of the Proceedings of the Numismatic and Antiquarian Society of Philadelphia, 1883. From the Society.
- Aarböger for Nordisk Oldkyndighed og Historie, 1884,
 Part I.; and Supplement, 1883. From the Society of Northern Autiquaries.
- 6. The Journal of the Royal Asiatic Society. N.S., vol. xvi., Part II. From the Society.
- Sitzungsberichte der Kön. Preussischen Akademie der Wissenschaften zu Berlin. Parta I.—XVII., January.—March, 1884.
- 8. Bulletins de l'Académie Royale des Sciences, &c., de Belgique. 3^{me} Serie, tomes i.—v. 1881—1883, and Annuaire 1882—1883.
- 9. Transactions of the Royal Society of Literature. 2nd Series, vol. xiii., Part I. From the Society.
- A Guide to the Coins of Great Britain and Ireland. By Major W. Stewart Thorhurn. From the Anthor.
 - Mr. H. Montagu exhibited a halfpenny or farthing of Eadred,

the original coin having been bisected for the purpose of creating two farthings, in the same way as pennies were frequently balved and quartered.

Mr. J. G. Hall exhibited a bammered sovereign of Charles II.'s first coinage, with the numerals XX behind the head of the king (weight 188 grains).

Mr. B. V. Hesd read a paper, by Mr. C. F. Keary, on a board of Anglo-Saxon coins found in Rome during some recent excavations on the site of the Honse of the Vestals at the foot of the Palatine. The find had been described by the Cavaliere de Rossi. See vol. iv. p. 225.

Mr. N. Heywood communicated a notice of a find of Anglo-Saxon coins beneath the foundations of Waterloo Bridge. See vol. iv. p. 349.

Mr. Toplis sent a list of forty varieties of seventeenth century tradesmen's tokens of Nottinghamshire not described in Boyne's work. See vol. iv. p. 348.

June 19, 1884.

ANNIVERSARY MEETING.

JOHN EVANS, Esq., D.C.L., LL.D., F.R.S., President, in the Chair.

The Minutes of the last Anniversary Meeting were read and confirmed.

Mr. Lucas White King was elected a member of the Society.

The Report of the Council was then read to the Society as follows:-

Gentlemen,—The Council again have the honour to lay before you their Annual Report as to the state of the Numismstic Society.

With great regret they have to announce their loss by death of four ordinary members:—

Sir Edward Clive Bayley, K.C.S.I.

Thos. F. Coats, Esq.

J. H. K. Ford, Esq.

E. T. Rogers, Esq.

And of two honorary members :-

Dr. J. Friedlænder. Monsieur F. Lenormant.

Also by resignation of the seven following members :-

J. T. Bent, Esq.

J. A. Cossins, Esq.

Major A. Davies.

J. H. Gibson, Esq.

P. Heward, Esq.

C. Williams, Esq.

T. A. Wize, Esq., M.D.

On the other hand the Conneil have much pleasure in recording the election of the seventeen following members:—

R. Thornton Andrews, Esq.

F. Biggo, Esq.

J. Clark, Esq.

M. Longworth Dames, Esq.

Walter Davis, Esq.

M. le Baron L. de Hirsch.

W. R. Hnbhard, Esq.

L. White King, Esq.

T. W. Kitt, Esq.

Mons. A. M. E. Lagerberg.

Richard Hoe-Lawrence, Esq.

J. D. Leader, Esq., F.S.A.

C. H. Nash, Esq.

Major W. Stewart Thorburn.

Hon. J. Leicester-Warren.

Hermann Weber, Esq., M.D.

W. J. Webster, Esq.

According to our Secretary's Report our numbers are, therefore, as follows:—

June, 1883 Since electe					Ordinary. 215 17	Honorary.	Total. 254 17
					232	39	271
Deceased					4	2	6
Resigned					7	_	7
Erased .					· —	_	_
June, 1884					221	87	258
					The second second		

The Council have also the honour to announce that they have nnanimously awarded the medal of the Numismatic Society to Aquilla Smith, Esq., M.D., M.R.I.A., for his distinguished services to the science of numismatics, especially in connection with the coinago of Ireland.

The Treasurer's Report was then read to the Meeting, by which it appeared that the balance in hand on June 19 was £178 8s.

The Report is appended :-

Dr. THE NUMISMATIC SOCIETY OF LONDON IN ACCOUNT WITH ALFRED EVELYN COPP, TREAS. Cr. Statement of Receipts and Disbursements of the Numismatio Society, from June, 1883, to June, 1884.

FRED E. COPP.
HONOKARY TREASUREE.

The President, in presenting the medal of the Society to Dr. Aquilla Smith, made the following remarks:—

Dr. Aquilla Smith, it is with much pleasure that I hand to yon the medal of the Numismatic Society, which has been awarded to you hy the Council in recognition of the great services you have rendered to our science, especially in connection with the coinage of Ireland. Nearly forty-five years have elapsed since you first communicated to the Royal Irish Academy a paper on the Irish coins of Edward IV., and since 1839 but few years have passed without something in connection with nnmismatica having appeared either from your active pen or faithful pencil. The pages and platos of the Kilkenny Archæological Society's Transactions, of Sainthill's "Olla Podrida," and lastly, of the Numismatic Chronicle, have all horne witness to your industry, discernment, and skill. That you may long continue to manifest your interest in numismatic purauits in the same efficient manner is the earnest hope and desire of us all; and I trust that some of the gratification which we feel in presenting to you this token of our esteem may be shared by you in possessing such a memorial of old numismatic allies and friends.

Dr. A. Smith then returned thanks to the Society for ita recognition of his work in numismatics.

The President then addressed the Meeting as follows:-

At the close of another Session it again devolves upon me to offer to you a few remarks upon the events of the past year. With regard to the Society itself, but little need be said, beyond again recording my gratification at its continued usefulness and prosperity. Our numbers still continue to increase and our finances are still in a healthy condition. There is, however, one element of uncertainty as to our immediate future prospects, inasmuch as the rooms of the Royal Society of Literature, in which we have had the privilege of being housed for so many years at a moderate rental, are likely to be required for Government purposea, and our landlords, as well as ourselvea, will in

all probability ehortly have to find a home elsewhere. The queetion of where this is to he, and ou what terms it can he obtained, is receiving the anxions consideration of the Council, and I hope will oventually he solved in a manner satisfactory to the Society at large.

Onr medal has this year again heen awarded to one who deserves well not only of numismatic science in general, but of this Society in particular, to the publications of which he has so often contributed, and of which he has so long heen an honorary member. I am sure that you will all agree with me in the hope that the name of Dr. Aquilla Smith may long continue to adorn our list of members.

The "Numismatic Chronicle" has, during the past year, continued to maintain its high standard of value and interest; and the papers which have appeared in its pages and the various communications which have heen made to the Society have extended over a wide area of the unmismatic field. The papers ou Greek uumismatics have heen more than usually ahundant, and most of them of considerable interest and importance.

Mr. E. H. Bunhury, in a memoir on unpublished cistophori, has from the riches of his own collection heen able to add nearly fifty coine to those already known. Some of these are of Ephesus, to the series of which town Mr. Head had already largely contributed, and othere again of Parium, Adramyttium, Pergamnm, Sardis, Tralles, Laodicea, and Apamea. A half cistophorne of Sardis he has published for the first time. With regard to the date of the first issue of cistophori, Mr. Bunbury is inclined to carry it hack to an earlier period than 159 u.c. as suggested by Mr. Head, and in corroboration of this view he cites specimens hearing the letters BA EY, which he considere to he indicative of King Eumenes II., whose reign terminated in that year. Passages in Livy suggest that cistophori wero known oven before the accession of Eumenes in B.o. 189, and the last word as to the date of their first issue does not as yet appear to have heeu said. In conclusion Mr. Bunbury calls

attention to the series of countermarks which occur in the well-known coins of Side in Pamphylia which seem to connect them with the cistophorus circulation in Asia Minor.

The Baron de Hirsch de Gerenth has favoured us with a notice of some rare and inedited Sicilian coins, two of which of Ætna and Zancle have been the subject of some farther remarks by That of Æton with the head of Silenus on the obverse and the seated figure of Zeus Ætnæns on the reverse is one of the most remarkable coins that modern discoveries have brought to light. Dating as it seems to do from the first half of the fifth century B.C., it is contemporary with the days of Pindsr, one of whose finest odes is addressed to the Ætnæan Zeus, passages from which are cited by Mr. Head in illustration of the details of the types. The heetle, for which Ætna was celebrated, occupies a prominent place under the head of Sileous on the obverse. How far the cantharus, or drinking-cup sacred to Dionysos, may be connected with the cantharus of Ætna, which we find here associated with his inseparable companion Silenus, I leave to ctymologists to determine. That the cup should have originally been made in the form of a heetle appears to me quite as probable as that it should, according to Athenans, Pliny and Julius Pollux, have derived its name "from one Cantharns who first made cups of this form." The coin of Zancle is remarkable whether we regard it as preserving the namo of that town to a period later than B.C. 476, when it is said to have been changed for that of Messana, or as exhibiting a highly advanced style of art at so early a date as the beginning of tho fifth century n.c. From a metrological point of view it is also important.

Mr. Reginald Stnart Poole in an important paper on Athenian coin-engravers in Italy has shown how far the influence of the parent city has affected the style of medallic art in her colonies in Magna Græcia. Not only at Thurinm, which was recolonized by Athens in the days of Periclos, but at Terina, Velia, Heraclea, and other towns, this influence is apparent, and points to the

existence of a distinctly Athenian echool of engravers whose chief signs himself with a ϕ , and who on the coins of Torina seem to have derived these inspirations for the figure of Nikê, from the famous balustrade-relief of the Temple of Nikê-Apteros at Athens.

Our Honorary Memher, M. Six, has favoured ue with a paper on the coins of the Satrap Mazaios which is of great importance Adopting the interpretation of M. Halevy, ho and interest. finde in the word which has hitherto been read Mazdai or Mazrai the name of Mazaios, who, according to history, was Satrap of the trans-Enphratic provinces, and of Cilicia under the Persian kinge during a period of nearly thirty years about the middle of the fourth century B.C. His coins form two dietinct series etruck in Cilicia and Syria, while a third consists of some coins struck in imitation of those of Athens, intended probably for local circulation while he was satrap of Babylon, and a fourth is attributed to Sidon. The paper concludes with a list of the most ancient coins of Tarsus, at which place the majority of the coine ascribed to Mazaios were struck. The coins hearing the name of Alexander in Phænician characters, M. Six ie now inclined to assign to the reign of Alexander the Great rather than to that of his son by Roxana. Altogether the paper ie replete with historical and numismatic research, and whether the whole of the conclusione of the anthor will ultimately be accepted or not, it will always be of the highest value as placing on record all that ie at present known with regard to the series of coine which hear such conclusive testimony to the power and extent of the old Persian mouarchy.

Mr. Warwick Wroth hae communicated two papers to our journal, the more important heing a comprehensive memoir on the coins of the island of Crote. Although he regards any attempt to produce a complete monograph on the subject of these coins as premature, I venture to think that when the time arrives for its publication we shall not find many important additions to our knowledge beyond what is now placed in our

possession. So long ago as 1860 Mr. R. Stnart Poole called attention in our Chronicle to the peculiar characteristics of Cretan art, which he dofined as heing pictorial rather than sculptural, and the coin of Phastus helonging to Dr. Hermann Weber, now for the first time published, affords an admirable example of this peculiarity. The suggestion of M. Lenormant that the) on the early coins of Gortyna is really a \(\Pi\), and the legend Poprovos to raise and not oaise, is fully horne out by this coin of Phæstus. It is not a little remarkable that the same formula of to maina is now shown to occur on a coin of Phæstus also. Perhaps it may eventually be found on coins of Cnossns and Cydonia as well. The majority of Crotan cities do not however seem to have struck coins earlier than during Mr. Wroth's second period, from B.o. 481 to 800. and fourth periods comprise the intervals from B.C. 800 to 200, and from B.c. 200 to 67. The range in art shown by coins of the same type and of the same period seems to be more distinctly shown on the coins of Crete than on those of any other part of Greece, and was probably due to the domand for dies excoeding the supply of those competent to engrave them. is however satisfactory to find that the names of some of the more skilful of the artists have been preserved; and Pythodorus of Aptera and Polyrhenium, and Novantus of Cydonia, deserve a place on the list which comprises Cimon and Evaenetus, though they cannot aspire to the same high level. The extent to which the Cretan artists were influenced by religious conditions has already heen pointed out by Professor Gardner, and though some of the local cults still stand in need of much elucidation, Mr. Wroth has been able in most cases to assign some reasonable interpretation for the various types, which unlike the inhabitants of the island, are certainly not del ψεθσται.

The other paper by the same anthor relates to some coins of Isauria and Lycaonia, which however are of Imperial times, and the list is only intended to form a supplement to that recently published by M. Waddington in the Revue Numismatique.

In purely Roman numismatics hut little has been hrought before us during the past year. The Rev. C. Soames has however given us a list of a small hoard of Imperial coins lately found at Mauton Down, near Marlborough, and extending over the reigns from Juliau II. to Honorius. I have also, through the kindness of Mr. Bliss, been able to enpplement my account of the coins found in Lime Street, hringing np the number there found to nearly five hundred. Among them were coins of several Emperors and Empresses who are rarely represented in English heards.

Beyond a few exhibitions of rare and fine ancient British coine we have had nothing relating to that series before ns; but we have been more fortunate with regard to Saxon coins. Onr old and faithful friend, Dr. Aquilla Smith, has brought nuder our notice a small heard, principally of Eadweard the Elder and Æthelstan, found near Dahlin, which contains some interesting coine, and furnished the names of several moneyers not previously known.

Mr. Keary has also called our attention to the remarkable hoard of Anglo-Saxon coins lately diecovered in the hall of the Veetals at Rome, and described by Signor Giov. Battista de Rosei. They are no less than eight hundred and thirty in number, and range from about A.n. 871 to 947, comprising examples of the coinage of Ælfred, Eadweard, Æthelstan, Eadmund, Sihtric, Anlaf, and Archhishop Plegmund. With them were two coins of Pavia, one of Limoges, and one of Ratisbon as well as a gold coin of Theophilus. It has been suggested that the hoard represents a consignment of "Peter's Pence" sent over from this country to Rome, and such may possibly he the case. The hoard, however, in ite general features closely recembles some of those discovered in Ireland such as that which I have described in the third vol. of the N.S. of the Chronicle, and might possibly have been brought to Rome by some pious Dane who had been converted from the error of his waye, and was anxions to make atonement for his transgressions. What is however most remarkable in the hoard is the number of new moneyers, and even of new mints, especially of Æthelstan, which it brings to light. The list given by Signor de Rossi makes me all the more regret that we have in English no work which gives us the same amount of detailed information with regard to the early Saxon coinage that the Swedish work of Hildehrand affords us for the later coine.

Mr. Heywood has enpplied us with a notice of a hoard of coine of Burgred discovered under the foundatione of Waterloo Bridge; and Mr. Walter Andrew has described to us a penny which he is inclined to attribute to Archbishop Ethered, but which has by others been regarded as a hundered imitation of a coin of Ælfred.

The communications on the subject of the English series have been hut few. Mr. Montagu has, however, given us an account of an unpublished penny of William the Conqueror, with the word PAX across the centre of the reverse, as on the coins of Harold II. He has at the same time taken the opportunity of making some observations on the signification of this inscription on coins which certainly in most instances seems to bear no reference to any historical events, and may, as suggested by thauthor, he more of the nature of a salutation. I may add that the block representing the coin was liberally presented to the Society by Mr. Montagu. The only other paper on English numismatics is one by Mr. Toplis on Nottingham seventeenth century tokens not in Boyne's list, which will be found of epecial interest to local antiquaries.

A valuable paper on the Scottish Coinage has been sent in by Mr. Mackenzie, being a list of the Groats of Robert II., of which he enumerates nearly a hundred etruck at Aberdeen, Perth, and Edinburgh.

The interesting medals of the Renaissance period bave again been brought under our notice. Mr. T. Whitcombe Green has described the grand medallion of Philibert the Fair and Margaret of Austria, which is now shown by the labour and astuteness of M. Natalis Rondot to have been the work of one Jean Marende, of Bourg-en-Bresse. To aid him in his work be called in an artist from Lyons, where a ecbool of medallists seems to have been founded by Niccolo Fiorentino, who, in conjunction with his father-in-law, produced the magnificent medallion of Charles VIII. and Anne of Brittany which this of Philibert in many respects recalls to mind.

Canon, or, as we must now term him, Archdeacon Pownall, has continued his notes on the Papal medals of the fifteenth century. His present instalment relates to the times of Paul II. and Sixtns IV., and comprises several of the works of Camelio and Gnazzalotti, as well as the subsequent productions of Paladino. I hope that other papers on the subject may follow it from the same skilful peu.

In Oriental numismatice we have been favoured with the catalogue of a portion of the remarkable collection of the coins of the Eastern Khalifehs helonging to the late E. Rogers Bey, whose recent decease we all have to deplore. This portion relates to the Ommiades of Damascus and the Ahhaste of Bagbdad. The accuracy of this catalogue is vonched for by the fact that it was eeen through the press hy Mr. Stanley Lane-Poole, who has also communicated to us a curions series of extracts from the Arabian historiane hearing upon the subject of Mohammadan numismatics.

Professor Terrien de LaConperie'e account of the old nnmerals, the counting rode, and the swan-pan in China, throwe much light on the development of numerals and processes of numeration in that singular country, in which so many European inventions appear to have been anticipated.

Such is a enceinct account of the principal numismatic work which bae been carried out by means of the Society during the past year. I must not, however, pass by an important independent work which after some years of labour has at last been published by one of our well-known members. I refer, of course, to the gold coine of England arranged and described by

Mr. Robert Lloyd Keayon. The need of such a work has long been felt, and it would he hard to find any one more competent to undertake it than Mr. Kenyon, whose lahours in editing the second edition of the English silver coins of his graudfather, Mr. Hawkine, had brought him into such close contact with another section of our coinage. In carrying out his work he has followed perhaps too closely on the linee of his aucestor, but to have given the details of each variety of coin in extenso would, it may he pleaded, have ewelled the volume to an inordinate size. amount of labour hestowed on the work, irrespective of that of condensation, must have been immense, and though no doubt numerous undescribed varieties will from time to time turn up, the great hulk of our English gold coine will he found carefully described in their minutest particulars in thie standard work, The plates are excellent, and the frontispiece and the first thirteen pages of the hook call attention to the series of English gold coins struck prior to the reign of Henry III., of which hitherto no collected history has been given.

Not improbably the list of Saxon trientee may eventually he increased; and indeed since the publication of Mr. Kenyon's hook a triens has been attributed to Winchester by the Viscount de Ponton d'Amécourt.\(^1\) There is, however, a remarkable feature in this case, viz. that the same coin which by the French author is described as reading +CAPAINAI + FILIO with VENTA E INA on the reverse, is by Professor G. Stephens claimed as hearing an inscription in runes AENIWVLV KV (nung) and the word LIOC or CLIO, while the reverse is made to read TENAES. Mr. Haigh 2 gave the legende as ANWVLVFV+CLIO and RENAISI; while a second coin of the same type published by M. Renier Chalon 3 is eaid to read +CORNILIO + + LENE-SM. But to return to Mr.

Ann. de la Soc. franç. de Num., 1888.
 Num. Chron., N.S., ix. p. 172.

³ Rev. Num. Belge, series ii. p. 501.

Kenyon's book, the remaining portion of which must contain descriptions of many hundred coins which were hitherto unpublished, or of which only scattered notices existed. Among them are several from my own cabinet, which I was glad to place at the author's disposal. At one time, indeed, I bad contemplated a book on the same subject, but as years went on and no leisure to write it arrived, I was pleased to be able to place in such competent bands what little materials I had at command. Another of our members, Major W. Stewart Thorhurn, has also just completed a nseful guide to the valuation of the coins of the British Isles. Although so many elements enter into the market price of any given coin, yet some general ideas as to value and rarity may be formed by means of such a work as this, and even the variations in the prices recorded for the same coin at successive sales are highly instructive. No pains bave been spared to make the work as complete as possible.

I must now hriefly allude to some of the losses which the Society has sustained by the death of its members during the past year.

Sir Edward Clive Bayley, K.C.S.I., had for a very long period been a member of our Society, and at the time of his decease had a seat on our Council. For many years resident in India, he bad given much attention to Oriental numismatics, on which he was one of the principal anthorities, and so long ago as 1860 a paper of his on some double-struck coins of the Bactriau king Azes or Azas appeared in our journal. More recently, in 1881, he communicated an important paper on the dates occurring on the coins of the Hindu kings of Kahul, with a subsequent supplementary note. His other researches on Indian epigraphy and numismatics are mainly embodied in the Journal of the Bengal Asiatic Society, of which he was five times the President, He also communicated two papers on the Genealogy of Modern Numerals to the Journal of the Royal Asiatic Society. Ho was the last surviving son of Mr. Edward Clivo Bayley, of St. Petersburg, and after passing through Haileybury, entered the

Bengal Civil Service in 1841. In the course of twenty years he attained to posts of the highest responsibility, hecoming Home Secretary to the Government of India, and subsequently member and President of the Indian Council. He also held the office of Vice-Chancellor of the University of Calcutta from 1869 to 1874. He died at Wilmington Lodge, Keymer, Sussex, on April 30, 1884, at the age of sixty-two.

Mr. T. F. Coats, of Ferguslie, Paisley, was elected a member of our Society in November, 1875, and was for many years a diligent collector of Scottish coins, of which he formed an almost nnrivalled series. In the hands of Mr. Burn they will to a great extent serve as the basis of an important work on the Scottish coinage, of which a portion is already in the press. Engaged with his brother, Sir Peter Coats, in an important branch of mannfacture at Paisley, he found time to devote himself not only to business, but to the improvement of the moral and intellectual welfare of his native town, as well as to the cultivation of literature, science, and art. The Fountain Gardens at Paisley, tastefully laid ont, and the well-farnished and nohly-endowed observatory which he presented to the town, testify to his considerate and princely liberality; and the great assistance which he rendered, both by gifts of money and devotion of time, towards the establishment of efficient schools in Paisley, proved his zeal in the cause of education. His numismatic tastes were. I helieve. developed somewhat late in life, but his judicions liberality soon placed his collection among the first in the country.

In E. T. Rogers Bey the Society has lost an ardent numismatist and an accomplished antiquary. During his long residence in the East he availed himself diligently of all the opportunities which occurred to him, with the result of forming a magnificent collection of Oriental, and especially Mohammedan coins, some notices of which he from time to time communicated to the Chronicle. Indeed, in our last volume there appeared a portion of the catalogue of his Mohammedan coins, of which a further instalment was promised, and may even yet he forthcoming. His

former papers, extending over the last fonrteen years, comprise essays on an early Dirhem of the Ommeyade Dynasty, on a Dinar of Bêdr son of Husnawiyeh, on some inedited coins of the Khalifahs of Bani-Umeya, and on coin-weights of glass. An accomplished Arabic scholar, he held the post of British Consul at Damasons and Cairo successively, and afterwards represented the Khedive of Egypt in London. On his return to Egypt he held office as Under Minister of Education, Inspector of Prisons, and Director of the Sale of Stato Lands. He was one of the most active members of the Commission for the Preservation of Monuments in Cairo, on which he presented a report to the Khedivo only a month ago. Besides his essays communicated to this Society, he contributed to the publications of the Royal Asiatic Society, and the Egyptian Institute. In Cairo his name will long he remembered as one whose devotion to Arabic learning and archeology was unrivalled, and whose energies for the presorvation of all that told of former Arabic greatness was nntiring. His death took place so recently as the 10th inst.4

Mr. John Kermack Ford, of Southsea, whose death we have also to deplore, was likewise well known as a collector. He joined the Society in 1877, but never communicated any memoirs to our publications, though he kindly allowed me to publish a gold coin of Allectus in his cahinet in the year 1868. The importance of his collections, which are at the present moment unfortunately heing dispersed, can be judged from the sale catalogue, extending as it does over seven days. In the Scottish series it was extremely rich.

From among our list of honorary members we have lost two names of world-wide fame, Mons. François Lenormant, and Dr. Julius Friedlænder. The former, who was a Member of the French Institute, and Professor of Archæology at the Bibliothèque Nationale, died at Paris on December 9, 1883, at the age of only forty-seven. The son of a distinguished

See Athenaum, June 14th, 1884.

archæologist, Charles Lenormant, he exhibited at an early age a taste for numismatics, and his Essai sur la Classification des Monnaies des Lagides, 1857, was published hefore he was twentyone. This was followed by a succession of other works, among the most important of which is La Monnaie dans l'antiquité, 1878—9. His Monnaies royales de la Lydie, 1876, has already been noticed in the Numismatic Chronicle. His latest work, Monnaies et Médailles, is an admirable little handbook, designed rather for the public at large than for specialists, and giving in a cheap form a fairly complete exposition of numismatic art profusely and well illustrated.

M. François Lenormant was a frequent contributor of the Revue Archéologique, and in palæographical inquiries his name will long occupy a foremost place in connection with his Alphabet Phénicien and his essay on the Alphabetum in Daremherg and Saglio's Dictionnaire des Antiquités Greeques et Romaines.

Dr. Julius Friedlænder, Director of the Royal Cabinet of Coins at Berlin, and Honorary Member of the Prassian Academy of Sciences, died, after a short illness, on the 4th of April last, in the seventy-first year of his age. Ho was born on the 26th of June, 1813, and, like François Lenormant, seems to have inherited his numismatic tastes, and I might almost say instincts, from his father. He was originally destined for the medical profession, hat an attack of fever which hefell him while on his travels in Italy having almost destroyed his power of hearing, he changed his vocation, and became assistant to Dr. Pinder in the Prussian Royal Cabinet in the year 1840, in conjunction with whom he published his essay on the coins of Justinian in 1848. He had previously published his Numismata Inedita, which comprised many important pieces from his father's collection. His other principal monographs on the coins of the Ostrogoths and the Vandals, and his Oskis-

⁵ A. Quantin, Paris.

chen Münzen, are well known. Hie emaller essays in nnmismatic periodicale were numerous and important, and emhraced coins helonging to all periods and countries. In 1858 he succeeded Dr. Pinder as Assistant Director, and he had the satisfaction of sceing the collection formed by his father incorporated in the Royal Cabinet under his charge. The importance of this collection can he estimated from the fact that among the seventeen thoneand coine of which it coneisted, many very rare, and all in fine preservation, there were no less than four hundred Italian bronze medallions. Many of them are figured in Dr. Friedlænder'e last magnificent work, Die Italianischen Schaumünzen des fünfzehnten Jahrhunderts, 1882, a work which hy itself alone would have established the author's reputation.

In 1868, on Dr. Bolzenthal'e retirement, Dr. Julius Friedlænder hecame Director, and under hie energetio guidance acquisition followed acquisition, so that the Berlin Cabinet now ranke among the first in Europe. It may be mentioned as an instance of this rapid growth that the ancient coins in the collection, which in 1840s nnmhered 26,841, had in 1877 reached to 87,146, and of these the Greek had increased from 6,510 to 55,474, and the Greek gold coine from 126 to 1,454. Whole collectione-some of them, unfortunately, divorted from this country-have continued to flow to Berlin, and the Fox,7 Guthrie, Prokesch, Dannenberg, Sandee, and innumerable emaller instalments have now found a home in the German capital. Of all these rich acquisitions Dr. Friedlander made the hest use. From time to time his published accounts of recently acquired rarities made them available for numismatic students of all countries, while his personal kindness and courtesy to those who visited the collection was constant and nnvarying. May his anccessor, our honorary member, Dr. von

⁶ Blätter für Münzfreunde, 15th May, 1884.

⁷ Zeitschrift für Numism., vol. xii. p. 118.

Sallet, long continue to follow in the footsteps of one whom he had learned so thoroughly to esteem.

In conclusion I will only express a hope that in the year on which we are now entering, our career may continue to be prosperous, and the losses to Numismatic Science less severe.

LIST OF MEMBERS

OF THE

NUMISMATIC SOCIETY

OF LONDON.

DECEMBER, 1884.

LIST OF MEMBERS

OF THE

NUMISMATIC SOCIETY

OF LONDON.

DECEMBER, 1884.

An Asterisk prefixed to a name indicates that the Member has compounded for his annual contribution.

*Alexéieff, M. Gegnoe de, Chambellan de S.M. l'Empereur de Russie, Ekaterinoslaw (par Moseou), Russie Méridionale.

ANDREW, W. J., Esq., Mere Bank, Fairfield, near Manchester.

Andrews, R. Thornton, Esq., Castle Street, Hertford.

ARNOLD, W. T., Esq., Guardian Office, Manchester.

*Babington, Rev. Churchill, B.D., M.R.S.L., Cockfield Rectory, Sudbury, Suffolk.

BACKHGUSE, J. E., Esq., The Rookery, Middleton Tyas, Richmond, Yorks.

BAGNALL-OAMELEY, MRS., Newlands, Coleford, Forest of Dean, Gloucestershire.

BARER, W. R., Esq., Bayfordburg, Hertford.

BARON, REV. JGHN, D.D., F.S.A., The Rectory, Upton Scudamore, Warminster.

BARRETT, T. B., Esq., 12, High Street, Welsh Pool, Montgomeryshire.

BIEBER, G. W. EGMONT, Esq., The Platanes, Champion Hill, S.E.

BIGGE, FRANCIS E., Esq., Carlton Curlieu Hall, Leicester.

BIRD, W. S., Esq., 74, New Oxford Street, W.C.

BLACKMORE, H. P., Esq., M.D., Blackmore Museum, Salisbury.

BLAIR, ROBERT, Esq., F.S.A., South Shields.

*Bliss, Thomas, Esq., Coningsburgh, Bethune Road, Amhorst Park, N.

BLUNDELL, J. H., Esq., 157, Cheapside, E.C.

*BRIGGS, ARTRUR, Esq., Cragg Royd, Rawden, Leeds.

BROKE-MIDDLETON, ADMIRAL SIR GEORGE N., BART., O.B., Shrubland Park, and Broke Hall, Suffolk.

Brown, G. D., Esq., 63, Albert Street, Regent's Park, N.W.

BUCHAN, J. S., Esq., 15, Barrack Street, Dundee.

Buick, David, Esq., LL.D., Elmwood Manse, Belfast.

BULL, HERBERT A., Esq., Wellington College, Wokingham.

Bunbury, Koward H., Esq., M.A., F.G.S., 35, St. James's Street.

BURNS, EDWARD, Esq., F.S.A.Scot., 3, London Street, Edinburgh.

BURSTAL, EDWARD K., Esq., Sinclair House, Holywell Street, Oxford.

BUSH, COLONEL J. TOBIN, 29, Rue de l'Orangerie, le Havre. BUTLER, CHARLES, ESQ., F.R.G.S., Warren Wood, Hatfield. BUTLER, JOHN, ESQ., Alexandra Mill, Bolton. *BUTTERY, W., ESQ., 6, Alderney Street, Pimlico.

OALVEET, REV. THOS., 15, Albany Villas, Hove, Brighton.
CARFRAE, ROBERT, ESQ., F.S.A.Scot., 77, George Street, Edinburgb.
CAVE, LAURENCE TRENT, ESQ., 13, Lowndes Square.
CHAMBERS, MONTAGU, ESQ., Q.C., 3, Serjeant's Inn, Chancery Lane.
*CLARE, JOSEPH, ESQ., 14, Mount Place, Whiteehapel Road, E.
*CLARE, HYDE, ESQ., F.R.H.S., 32, St. George's Square, S.W.
COCKBURN, JOHN, ESQ., Abbotsdene, Greenside, Richmond.
*COPP, ALFRED E., ESQ., M.R.A.S., Hatherley, Wimbledon Hill,
and 37, Essex Street, Strand, Treasurer.

CREEKE, MAJOR ANTHONY BUCK, Monkholme, Burnley.

*CROŸ, PRINCE ALFRED EMMANUEL DE, Château du Rœulx, Hainaut, Belgium.

CROWTHER, REV. G. F., M.A., 5, Caroline Street, Bedford Square, W.C.

CUMING, H. SYER, Esq., F.S.A.Scot., 63, Kennington Fark Road. CUNNINGHAM, MAJOR-GENERAL A., C.B., H. S. King & Co., 65, Cornhill.

Dames, M. Longworth, Esq., C.S., M.R.A.S., Dera Gazi Khan, Panjab, India.

DAVIDSON, J. I. STRACHAN, Esq., Balliol College, Oxford.

DAVIES, WILLIAM RUSHER, Esq., Overthorpe House, Wallingford.

DAVIS, WALTER, Esq., 23, Suffolk Street, Birmingham.

DOUGLAS, CAPTAIN R. J. H., Junior United Service Club.

DOULTON, J. DUNEAU, Esq., Queen Anne's Mansions, St. James's Park, S.W.

DRYDEN, SIR HENRY, BART., Canon's Ashby, Byfield, Northamptonshire.
